WE HELP YOU KEEP IN STEP

PRINTS & DESIGNS CENTRE

Export with confidence — confidence in the customers' preference for your fabrics. We help you gain that confidence. "Prints and Designs Centre", set up by the Council, for instance. It is a treasure-house of popular textiles samples drawn from all over our export markets. Variety of international prints, designs and patterns for you to choose. Make it a point to visit the Centre . . . Adapt your production to suit your customers' taste. We help you keep in step with world markets.

The fine art of making steel

It is thought processes, new ideas and experiments that help transform iron ore into different steels for different uses.

High tensile steel for bridges, non-corrosive steel that welds easily for ships, freight cars and trolley buses.

Bullet-proof armour-plate and high speed steels for defence.

Chrome-molybdenum steels for aircraft.

Quality tool steel for saws and razor blades.

And bars, specially rolled to American specifications that have been sent to the United States.

For over thirty years now, Tata Steel's Research and Development Laboratories have been pioneering the development of special steels in India.

TATA STEEL

AJANTA GRAPH PAPERS & CHARTS

Many years of research, experience and finest quality material goes in the making of AJANTA Graphs and Charts

No wonder, today, AJANTA Graphs and Charts are accepted by the users as one of the highest standard of workmanship comparing even to the finest imported brands. Thus these charts and Graphs also save the foreign exchange which is so valuable for the Indian economy

End of Pakistan?

IT is difficult to have a clear picture of what is happening in Bangla Desh where, with primitive weapons and indomitable courage, the people are fighting the military might of Pakistan for establishing democratic freedom. As a resolution adopted by our Parliament on Wednesday says, a massive attack by armed forces, despatched from West Pakistan, has been unleashed against the 75 million people of East Bengal with a view to suppressing their urges and aspirations. Tanks, bombs, rockets and paratroopers are engaged in a desperate bid to break the resistance of the defenceless civilian population. Where will this senseless carnage end? Is it the end of Pakistan and the establishment of a free Bangla Desh? Whatever happens, it will take a long time for the people of Bangla Desh to forget the inhuman atrocities inflicted on them by the Pakistani troops.

The Government of India has rightly acted with great restraint even while expressing its solidarity with the people of that troubled land in their struggle for a democratic way of life. It has taken care to see that nothing is done that could be construed as undue interference in the affairs of the neighbouring country. Even the resolution moved by the Prime Minister and adopted unanimously by Parliament seeks essentially to rouse the conscience of the world and to compel the Government of Pakistan to put an end immediately to "the systematic decimation of people which amounts to genocide". The happenings in Bangla Desh are a matter of concern to humanity at large and any action that could be taken with advantage has to be under international auspices. The Government of India is exploring the possibility of raising the issue in the UN Security Council. India is in touch with the governments of other

countries as well as members of the Afro-Asian community to evolve a common approach founded on basic human values. Besides this the Government seems to have taken a decision to allow refugees from Bangla Desh to enter Indian territory in their bid to escape the terror of the Pakistani troops. This decision is quite consistent with the approach of the Government which is based on humanitarian grounds. At this stage nothing more should be done till a clearer picture of the developments in Bangla Desh is available.

It is unfortunate that some neighbouring countries like Ceylon have provided refuelling facilities to the Pakistani armed forces on their way to mow down defenceless civilians. One can understand the desire to avoid entanglements in the internal affairs of other countries. But certain human values must have priority over any other consideration. It is these human values that are involved in the facilities provided by these neighbouring countries.

While the Government and the people of this country should do all they can to help the victims of aggression, they should desist from taking unilateral action which might be construed as interference in the affairs of Pakistan. Till the present military action started, the issues were fairly simple. Sheikh Mujibur Rahman and his Awami League had captured a majority of seats in the National Assembly of Pakistan and they were demanding the transfer of power to the majority party and an end to martial law. These demands were quite consistent with the democratic values to which India is committed. President Yahya Khan was himself reported to have been in favour of conceding these demands. It is now clear, however, that he was engaged in negotiations with the Sheikh merely

with a view to buying time. Even while these negotiations were on, military preparations were in full swing and West Pakistani troops suddenly appeared at the port of Chittagong. Soon afterwards negotiations were abruptly ended. Sheikh Mujibur Rahman was charged with treason. The Awami League was declared an unlawful body and stricter martial law regulations were proclaimed, which made it difficult for the people of Bangla Desh to agitate for what they considered to be their legitimate rights. It was at this stage that Sheikh Mujibur Rahman is reported to have declared Bangla Desh as an independent nation, and his followers are now engaged in a bloody war to assert their sovereignty on Bangla Desh.

The shift in Sheikh Mujibur Rahman's stand is no doubt the result of the treatment meted out to him by President Yahya Khan and Mr Bhutto. They refused to recognise the simple fact that he was the leader of the majority party and as such was entitled to demand that power should be transferred to him as the representative of the people. As the Sheikh put it, while in the neighbouring India Mrs Gandhi was called to form the Government immediately after her party won the majority, bullets awaited him after winning the majority. Instead of conceding this legitimate demand West Pakistan declared a virtual war on Bangla Desh without any provocation from either Sheikh Mujibur Rahman or the Awami League. It is difficult to imagine what happened between the final talks. President Yahya Khan had with Sheikh Mujibur Rahman and his announcement that the Sheikh was guilty of treason. It is the West Pakistan military administration which is solely responsible for the Sheikh's declaration of independence of Bangla Desh. It can further be argued that the recent happenings in Bangla Desh have laid bare a basic contradiction in the very two-nation theory on which Pakistan is based. It had been presumed rather too hurriedly that common religion automatically served as the basis for a sentiment of belonging to a common nation in the western and eastern wings of Pakistan separated by nearly 2,000 kilometres. It has now been proved beyond a shadow of doubt that the people of East Bengal could not reconcile themselves to the domination of West Pakistan. They could not accept the underlying assumption that the people of West Pakistan were somehow racially superior to the people of East Bengal. The sweeping success of the Awami League in the elections was largely due to the resentment of the people of East Bengal against the western wing. They had a legitimate grievance that no attempt had been made by the military administration to develop the economy of East Bengal and that it had unnecessarily picked quarrel with India and snapped the trade ties that are so vital to the economy of East Bengal. The Bangla Desh leaders were, therefore, justified in their feeling that they were treated as secondary citizens in a country where they were in a majority.

Granting all these, however, India has to accept the fact that she was a party in the creation of Pakistan. There has to be sufficient justification for the recognition of Bangla Desh as an independent nation in terms of international law and practice. Without interfering in the internal affairs of a nation it would be legitimate to accept a *fait accompli*. There are instances in recent history supporting such a step. But this can only be done after the fact of Bangla Desh is sufficiently well established. Our sympathy for the people of the neighbouring country in their sufferings should not hustle us into an action which might have serious implications. The best course, therefore, is to act in unison with other like-minded nations. In the meantime we have to do all we can to mitigate the hardships of the people of Bangla Desh especially when they cross over to our territory.

Still-born credit planning

THE State Bank Chairman, Mr R. K. Talwar's speech at the 16th annual meeting of the shareholders is informed by an understanding of practical issues involved in implementing the basic

policies relating to banking and monetary affairs. He is fully dedicated to the new banking policy designed to aid the weaker sections of the community. Also, he supports without any reservation the recent monetary curbs designed to contain inflationary pressure. But he is aware, too, of the dilemma facing the banking system which cannot deny assistance to the large- and medium-scale industries or to the priority sectors, while at the same time complying with the credit curb directives of the Reserve Bank. Banks are thus placed in a difficult situation in which they can be accused by some of not having gone far enough and by others of having gone too far in meeting the wishes of the monetary authorities.

The dilemma of the banks is that large- and medium-scale industries cannot be denied assistance without detriment to industrial production, and the weaker sections of the community cannot be denied assistance without a serious setback to public policy. Mr Talwar was, therefore, right when he suggested, "surely the decision cannot be left to the discretion of each individual bank and the situation calls for credit planning and clear guidelines to the banking system as regards the appropriate priorities in lending".

In this situation, the constructive suggestion made by Mr Talwar deserves attention from all concerned and particularly from the monetary authorities. Mr Talwar starts with the premise that the quantitative apportionment of the total bank credit among the various sectors and sub-sectors of the economy should be in keeping with Plan priorities. In essence, this is not a wholly new idea. The necessity as well as the feasibility of credit planning were accepted by the Government about three years ago. In order to ensure evolution of a proper credit plan, the Government also appointed the National Credit Council, which, unfortunately, has been in a dormant state for the past two years or so. In the context of the new situation, highlighted by Mr Talwar, the Union Finance Ministry and the Reserve Bank should revive the work on credit planning and if necessary revive the National Credit Council also.

Mr Talwar's thinking on the subject of financing agriculture by commercial banks also deserves attention. Banks cannot go in this direction at breakneck speed. If loans to farmers are to do any good to the farmers and the country, and not jeopardise the existence of the banking system, the banks must evolve the machinery to evaluate the proposals initially and supervise the use of the loans subsequently. Hence Mr Talwar's concept of area approach, under which loans are given in selected areas consisting of a village, a cluster of villages, or a few talukas, leading to "integrated and harmonious development". He is, of course, all for a progressive increase in this activity, but his is a call for recognition of reality.

Mr Talwar has also raised a few controversial issues. One relates to rates of interest on deposits. If the purpose of raising the Bank rate is to raise the rate structure, and the lending rates are stepped up accordingly, the depositors should not be left high and dry. Mr Talwar has rightly argued that the depositors must also be given what is due to them. Many eyebrows might be raised at his criticism of the Unit Trust of India and the Life Insurance Corporation of India operating in the call money market and commanding rates of interest on their surplus funds which are "as disproportionately high as 11 to 12 per cent", when individual depositors are denied the same benefit. Perhaps the two financial institutions have a case, and it is up to them to state it. On a broad consideration, it appears to us that it should be either an "inter-bank" call money market, confined to banks as it used to be, or it should be a call money market in which both individuals and institutions can participate. The pros and cons of this issue call for careful study before one takes a dogmatic stand on it. Any way, as for the Unit Trust of India, the situation appears to be very clear. It was formed by the Government not to promote financial investment but exclusively to promote industrial investment in the country.

I HEAR that a wind of restlessness is blowing across some of our chambers of commerce. Young industrialists have now begun to question the very approach of seasoned industrialists and the accommodating office-bearers of these chambers. The questioning is taking place in almost every direction. It is being asked whether the chambers of commerce should confine their activities to stereotyped protests about the real and the not-so-real grievances of the business community. Would it not be proper, it is being suggested, to extend the activities of the chambers to the vital task of protecting such basic interests of the consumer as fair price and availability of unadulterated goods? It is also asked whether our chambers of commerce should in effect remain the mouth-piece of an influential and powerful minority of the private sector or of the entire spectrum of the private sector. Young and progressive industrialists wonder whether the chambers of commerce should not forge internal sanctions to discipline a few blacksheep who tarnish the image of the business community. The recent unprecedented rebuke administered by the Indian Merchants' Chamber to the paper industry for manipulating production pattern in such a way as would create avoidable inconvenience to consumers has been hailed by the younger generation of industrialists as a new departure. But if a chamber of commerce warns an erring industry without forging sanctions, its warnings might eventually become a joke.

Is it impossible to forge sanctions against erring members of a chamber of commerce? Our Bonn correspondent, Mr Radhesyam Purohit, who is on a lecture tour of India tells me that German chambers of commerce protect the consumers against the malpractices of business and industrial firms quite zealously. Mr Purohit says that all the traders and industrial units in West Germany have to become members of the town Handelskammer or chamber of commerce. Though the Handelskammer represents the interests of its members, it cares equally for the rights of the consumers. For example, if you buy an electrical appliance from a shop and find that you are cheated in the matter of price or quality, you can go to the Handelskammer and file a case. If, after examining both sides of the case, the Handelskammer finds that the supplier was guilty of overcharging or of supplying goods of inferior quality, it can even dismiss him from the chamber of commerce. This means the end of his business. You cannot do any business in West Germany unless you are a member of a chamber of commerce. In cases of minor aberrations the chamber imposes a penalty on a trader or a manufacturer. Recovery of this fine is guaranteed by the German civil court. So the whole structure of the German chambers of commerce is so organised as to protect the interests of business and consumer simultaneously.

There has been considerable talk these days about the dialogue between business and government. It is true that to quicken the pace of growth with social justice the government and the business community should speak in the same idiom. It is also true that one should not over-emphasise one aspect of the problem and the other another aspect of the same problem. It has so happened that the stock reaction of business spokesmen to Indian poverty is "increase production" and that of the politician, "dis-

EDITOR'S NOTEBOOK

tribute wealth". In a modern technological society the cake cannot be enlarged without putting more purchasing power in the hands of those who have little. This purchasing power would be meaningless if the output is not increased simultaneously in a big way. So the issues of increased production and social justice are so inextricably linked that only an economic illiterate can emphasise one aspect to the exclusion of the other. Just as our trade unions have to be output-oriented, our chambers of commerce should be constantly aware of the crucial role that social justice plays in increasing output without avoidable interruptions. Such a transformation of trade unions and chambers of commerce can only take place if there is some rapport between these organisations and the mass of consumers. The responsibility of the chambers of commerce is all the more important because they represent a relatively affluent segment of our poor society. Evolution of such a responsibility has assumed importance because of the fact that there is hardly any movement for the protection of consumers in India. Here is a rare opportunity for our chambers of commerce to become the spokesmen of both business and consumers. Once Acharya Vinoba Bhave aptly observed that if the private sector protects the interests of the people, it need not worry about its future. The people themselves will defend the private sector.

Are our chambers of commerce capable of seizing this opportunity of becoming spokesmen of both business and consumers? I have a feeling that these sleepy organisations are unaware of the changing environment in which they have to function. From the endless number of memoranda prepared by them one gets an impression that more often than not they are in effect the spokesmen of a small segment and not of the private sector as a whole. To be specific, the small trade and industry, which account for about 15 per cent of the economic activity in this country, are almost totally neglected by these chambers. Of course, recently some of them have established special committees to look after the interests of the unorganised private sector. But these committees rarely meet. Their perfunctory functioning only reflects their cavalier attitude towards the small trader and entrepreneur who are the *Harijans* of our private sector.

I believe that the role of chambers of commerce in a poor developing country which functions within the framework of parliamentary democracy is quite different from that in an affluent democratic society in the West. In Western countries, because of the technological development which has percolated to the lower strata of society and the widespread system of social security, there is a tolerable floor below which poverty would not descend. In such a society the intensity of tensions is on the whole kept within manageable proportions. The common man in industrialised countries sometimes suspects a lobby but on the whole he tolerates it. In fact, the majority of the people consider it as an integral part of the social and economic organisation. But in a country like India a lobby of the relatively

affluent section of our society is considered at best a nuisance. Normally in the public eye it is equated with an avoidable curse. The ostentatious consumption of wealth at the slightest provocation has accentuated this feeling. It is true that the ostentatious consumption by Indian politicians is worse than that by most of the industrialists. But this is not immediately noticed because of the incessant propaganda against the private sector and also because of the fact that in a democracy ministers could be thrown out at the interval of every five years or so. Whatever may be the reason there has been a feeling among the people that the distribution of justice is not evenly meted out in India. It is this widespread feeling of being kept out of the feast that has created exasperating problems for the private sector and their organisations.

When I think about the functioning of the chambers of commerce in this country, one thing that strikes me is the extremely poor calibre of the office secretaries who man these chambers. I know there are a few notable exceptions. But they are an oasis in the Sahara of our trade and industry organisations. Like the elected ministers, the honorary office-bearers come and go, but it is the office secretary of the chamber who has to maintain continuity of its functioning and develop the requisite technical expertise to safeguard the interests of the association. In today's situation any person who is supposed to do this job should be a highly competent person, as competent as a top-ranking executive of a large business house. More often than not, these secretaries of chambers are poorly paid. Their selection is made by seniority without any regard to their competence. Their work is more appreciated if they function as yes-men. It might be easy for the honorary office-bearers to carry on the work of the chamber with such yes-men. But it is not realised that spineless secretaries are ill-suited to carry out the extremely complex task which is entrusted to them.

Having seen the functioning of a number of association secretaries, I am convinced that we are badly in need of an organised system of imparting training to association secretaries. What should be the curriculum? It should include drafting of memoranda, adequate knowledge of the functioning of the Indian economy and of the economic policies of the Government, an understanding of the political issues involved and of the psychology of bureaucrats and politicians who together formulate and implement the economic policies of the country. In these days of seminars, I wish some all-India chamber of commerce holds a seminar on the curriculum for the course of trade association secretaries. I hope some organisation will start regular training courses for association secretaries. There is no dearth of economic research foundations. But they are more concerned with special pleading than with independent economic research. The resources of the pseudo-economic research organisations would be better utilised if they are diverted to finance even refresher courses for the secretaries of our chambers of commerce.

MARKET GOSSIP

Funds for call money market

FINANCIAL institutions seem to have been irked at the reopening of the issue regarding the correctness or otherwise of their lending funds through the call money market. The Reserve Bank had permitted the LIC and the UTI last year to enter the call money market after considering the pros and cons of the issue. The institutions concerned, namely, the co-operative banks, the LIC and the Unit Trust do not seem to have anticipated that the State Bank of India would question the propriety of entry of these institutions into the call money market.

The financial institutions feel that if they had not lent their surplus funds through the call money market, the call rate would have gone up beyond the 11 per cent level. In the past also the rate had gone up to 13 per cent, though temporarily, when the LIC and the UTI had not been operating in the call money market. The funds lent by them through the call money market were needed by them at short notice for long-term investments or other purposes. As the busy season comes to an end the demand for funds in the market would also go down. Thus the higher return on the funds in the market was a passing phenomenon. If these institutions had been borrowers in the market would the SBI or other banks have made available funds at the Bank rate? Another point made in this connection is that some of the subsidiaries of the SBI had borrowed from the former banking companies funds at higher rates. When the SBI group of banks could afford to pay higher rates to private sector companies what was wrong if the public sector organisations were to some extent benefit by higher interest rates? After all, the benefit would be passed on, at least partly, to the policyholders and unit holders numbering lakhs.

It is also pointed out that at the beginning of the busy season the SBI had announced its intention to enter the call money market both as lender and borrower "at an opportune moment". It was then stated that the entry of the SBI into the call money market would serve to some extent the purpose which the RBI had been striving for, namely, the Reserve Bank should be the lender of the last resort in the real sense after the available surplus in the banking system had been absorbed. However, during the first five months of the current busy season the SBI had not lent any funds in the call money market.

The LIC's total funds in the banks are nearly Rs 20 crores. A substantial part of these funds are in current account which do not fetch any interest. The interest earned by the LIC on the deposit account is at rates that do not have any bearing with the interest rate at which funds are available for individuals or institutions. The SBI's plea for placing the financial institutions at par with individuals in this respect is not acceptable to these institutions. A section among the financial circles feels that there is no competition among the banks for securing

deposits. The depositor does not, therefore, get a fair deal. The borrower also has to pay high costs for bank credit. The spread between the earnings of the banks on the funds they lend and the interest paid on deposits is widening. The operational costs of the banks are going up because of go-slow and other developments. If the banks succeed in improving their efficiency and mobilising the deposits they could cut down their reliance on the Reserve Bank as also the inter-bank call money market. This could more effectively bring down the interest costs of the banks.

At least one phase of this controversy seems to be over. The Reserve Bank sources indicated on March 30 that the Bank was unlikely to withdraw the permission given to the LIC and the UTI to operate in the call money market. □

Cotton take-over

THE Union Government's commitment to effect a total take-over of import trade within a year or two, as announced by Mr L. N. Mishra, the Union Minister for Foreign Trade, in the Rajya Sabha on Friday last, has had a mixed reaction in cotton circles. With the implementation of the canalisation programme from the current season, the importers have, no doubt, been resigned to the inevitable sequel. There are talks in import circles about possible diversification of their interests. As quite a few importing firms also undertake transactions in indigenous cotton, it is possible that the stakes will be more and more on Indian cotton on the assumption that it would take much more time for the Government to take over indigenous trade, over which also there has been a commitment by the ruling party.

Placing the accent on the reference to the period "a year or two" as contained in the Minister's statement, a section of the importers is of the view that this is breathing time enough to make a graceful, if not profitable, exit from the field. Some of the representatives of the import trade have already gone abroad or have plans to go overseas to see how best the present situation could be taken full advantage of. Whatever be the ideological justification for the take-over of the import trade, the cotton economy, trade circles feel, is bound to be faced with teething troubles following fuller experimentation of canalisation. As it is, cotton imports during the current season have been less than half of the quantum received this time last year. Actual arrivals of cotton, as on March 6, have been placed at 162 lakh bales as against 3.78 lakh bales in the corresponding period last year. □

Echoes of Bangla Desh

IS the conflict in Bangla Desh having its repercussions on trade and industry in the country? The proximity of the area of the conflict is a factor to be reckoned with. However, the legacy of the Indo-Pak conflict five years ago still continues. Our trade relations with that country are not yet normalised. The result is that there is no official import or export of goods between the Eastern wing of Pakistan and

this country. Some of the goods which are in shortage here like the synthetic yarn are smuggled into the country. During the current conflict this activity seems to have received a setback. Prices of some of these goods had spurted initially when the conflict broke out. Pakistan has been a keen competitor to India in certain fields, particularly jute and cotton textiles. It was, therefore, no surprise that the bulls in Clive Row extended their support to ready and near delivery jute goods in anticipation of sizable diversion of overseas customers from Pakistan to this country. The shorts and shippers also resorted to brisk covering of their business, thereby accentuating the bullish trend. There are also other factors for the rise in prices of jute goods, namely, gradual improvement in overseas inquiries. USSR absorbed some lots of hessian and sacking for ready and near-deliveries. The US bought fair parcels. Other foreign buyers also showed some interest. □

Financiers in small business

THE RBI has asked commercial banks to keep in touch with the changes or modifications in the proprietorship and constitution of the small enterprises assisted by them. The RBI has made this suggestion following instances brought to its notice of financiers making entry into the group of self-employed small entrepreneurs by offering financial help and becoming partners. The central banking authorities are not averse to the participation so long as it represents genuine promotional effort on the part of the financiers. However, if there is an effort to buy up such enterprises purely for the benefit of financiers it would be objected to. Market circles while agreeing with the objective of the directive hope that the banks would not exercise their powers as might make it difficult for the small enterprises to obtain assistance from financiers. With the persistent credit stringency the small enterprises should not be subjected to such restrictions as might deny them credit. □

The broad-based GTC

THE management of the Golden Tobacco Company is now broad-basing its capital structure. The share capital of the company amounting to Rs 2.80 crores held by 14 shareholders will now be widely dispersed to be eventually held by about 5,000 shareholders. The company is not currently thinking in terms of a fresh public issue. It has received a licence for additional capacity, but the decision on the resource to be mobilised to put through the programme is yet to be taken.

Market circles have welcomed the news of this private limited company being converted into a public limited company. The company was locked in a fierce controversy last year with the Indian Tobacco Company (formerly Imperial Tobacco) about the domination of the ITC in the Indian cigarette market. A criticism made against the Golden Tobacco was that it was a family concern in which the shareholders were hardly 14. The controversy had also figured in Parliament. □

Arriving shortly, India's first and finest International suitcase **V.I.P.**

**When you carry a V.I.P.,
you are a celebrity travelling
incognito. Kathmandu, Madrid,
Monte Carlo...wherever you go,
V.I.P. gives you away.**

V.I.P. — TOUGH — The V.I.P. has brute strength. To withstand jolts. Impact. Rude shocks. Anytime lives longer than the proverbial cat.

V.I.P. — GOOD LOOKS THAT LAST — The V.I.P. is dent-proof, scratch-proof, virtually break-proof. Just a pat with a damp cloth. And it gleams back in appreciation.

V.I.P. — LIGHT — The V.I.P. is underweight. You can lift it with a finger. Your littlest one.

V.I.P. — ROOMY — The V.I.P. is convenient. Flaps. Pockets. Hidden nooks and corners. To take all you've got. And more.

SURVEY

CRAWLING PLAN PROJECTS

FURTHER details of the shortfalls in Plan expenditure in the financial year that has just ended are available in the interim budget for 1971-72 presented to Parliament last week. These shortfalls have been euphemistically described as "savings" in the budget. But in the light of Mr Chavan's observation in his budget speech that it was a matter of great disappointment that the actual outlay had shown a significant shortfall in relation to the original budget provisions, it is clear what these "savings" actually constitute. From a perusal of the budget it appears that a large number of Central ministries and departments have taken part in this "savings" drive. In other words, or to put it truthfully, many Plan projects and programmes have not been implemented to the extent of the financial provisions made in the 1970-71 budget.

The Bokaro steel project occupies a predominant place in the list of schemes where shortfalls have occurred. During the last financial year a sum of Rs 88 crores was to have been invested in this project which is meant to increase the production of scarce categories of steel. However, the investment is now estimated at about Rs 57 crores, about Rs 31 crores less than the budget provision. The second phase of Bokaro, which envisages expansion of the project from 1.7 million to 4 million tonnes, has been taken on hand before the completion of the first phase because of acute steel shortage in the country. But this also has made very little headway as, out of a provision of Rs 7.5 crores in last year's budget, only Rs 1.5 crores have actually been spent.

Another key industry, fertilisers, has done no better. Out of Rs 27.3 crores provided in the budget only Rs 19 crores are estimated to have been invested. It has been officially explained that this is due to slow progress in the implementation of some of the projects of the Fertilizer Corporation of India. Hindustan Copper Ltd has spent Rs 7 crores less than the budgetary provision of about Rs 20.57 crores because of delay in the receipt of equipment, non-fulfilment of drilling targets and shortage of steel resulting in slow progress of civil works. For more or less the same reasons Bharat Aluminium Ltd's investment in 1970-71 has fallen short of the budgetary allocation of Rs 12.40 crores by Rs 5 crores. Other public sector organisations which have lagged behind original budgetary estimates are the Indian Petrochemicals Corporation, the National Mineral Development Corporation (owing to slow progress in the implementation of the Kiruburu and Bailadila iron ore mining expansion schemes) and the Food Corporation of India, which has not spent as much on the building of storage godowns as had been provided for.

The interim budget for 1971-72 sets much store by the crash programme for rural employment for which a provision of

Rs 50 crores has been made. But judging by the performance of more or less a similar programme during the last financial year it is doubtful if it will have the maximum impact on unemployment and mass poverty as claimed by Mr Chavan. Out of Rs 25 crores provided in last year's budget for giving grants to the States for undertaking rural works in selected areas, only Rs 6 crores were spent. True, many States were late in making a beginning with the programme. But even now there is not much evidence of the programme having gathered momentum. On the other hand, since there is a change in the context of the new rural employment programme—it is also intended to add to the productive potential of the rural areas—it will entail the drawing up by the States of their schemes afresh which may once again provide them an excuse for making a late start with it. □

TRUCE IN INDIAN AIRLINES

THE lock-out in the Indian Airlines has now been lifted with an agreement reached by the management with the representatives of the employees. There were even some difficulties after the agreement was reached but these difficulties have now been ironed out and it is expected that within a short time the flights will be normal. There is some justification in the public comments that all the points of dispute between the management and the employees have still to be settled and that, unless a solution acceptable to both the parties is arrived at, there might be further trouble. One may only hope that after the experience of the 15 days lock-out in the Indian Airlines both the sides will make earnest efforts to arrive at a just solution. It has been agreed that the outstanding issues will be resolved by mutual negotiations under the auspices of the Chief Labour Commissioner. If these negotiations did not result in an acceptable solution, the matter will be referred for arbitration by an eminent and knowledgeable person who will be nominated by the Union Labour Minister. This procedure should ensure that the issues under dispute would be considered properly and an impartial objective assessment of the pros and cons will be made. This should therefore put an end to the dispute, and one should hope that the call given by the association and the union concerned to its members to give their best would be heard by the members.

It has been suggested that the agreement was made possible because of the developing situation on the country's borders and the need to keep internal communications uninterrupted. Even if this be so, it is an indication of the crucial role which Indian Airlines plays in the economy and security of our nation. This should make it possible for both the sides to evolve a machinery whereby the disputes are settled long before they reach a flash point. Mr K. T. Satarawala, Chairman of the Indian Airlines, is reported to have

told the IA officers that if the conditions across the borders had been normal, the decision might have been different. This gives an impression that the agreement is under duress. This impression should be removed. It is true that under present conditions one cannot guarantee a long period of industrial peace in any establishment. Mr Satarawala has expressed the view that the introduction of new aircrafts, inter-union rivalry and the vulnerability of Indian Airlines as an essential service were the basic reasons for the increasingly higher demands by unions. These factors, however, cannot be wished away. Prudent management of industrial relations would demand that a proper relationship between the employees and the management should be evolved, keeping in mind all these factors. They are by no means peculiar to Indian Airlines. Given a proper approach, an amicable relationship is not beyond the reach of the parties concerned. □

STATE BUDGETS

Uttar Pradesh

AN interim budget with an overall deficit of Rs 37.20 crores was presented to the State Assembly by the Finance Minister, Mr Kailash Prakash, on March 22. The deficit to the extent of Rs 19.65 crores is expected to be met by net incomes under the public account, including withdrawal from the reserves; the remaining deficit remains uncovered. No fresh taxes have been proposed in the budget. The Finance Minister has pointed out that a provision for Rs 15 crores has been made in the budget for the interim relief granted to the State Government employees. The Government has also decided to appoint a pay commission to recommend new scales for the employees of the State Government, co-operatives and educational institutions. All the *bhumidars* and *sirdars* holding land up to 2.5 hectares would be exempted from land revenue. This would benefit about 85 per cent of the farmers. The Government has also decided to appoint a high-power committee to study the causes of the unsatisfactory economic progress of Harijans and other backward classes and suggest remedial measures. The outlay for the 1971-72 Annual Plan has been fixed at Rs 209 crores, which is higher by 12 per cent than the estimated expenditure of Rs 187 crores in the 1970-71 Plan.

Kerala

THE Chief Minister of Kerala, Mr C. Achutha Menon, who is also in charge of the Finance portfolio, presented the State budget for 1971-72 to the Kerala Assembly on March 19. The revenue receipts are placed at Rs 165 crores and the expenditure at Rs 181.26 crores resulting in a revenue deficit of Rs 16.26 crores. The recently granted *ad hoc* increase in the emoluments of the Government employees

will result in a heavy burden on the State Exchequer. This head alone accounts for about 55 per cent of the total revenue expenditure. The capital account with receipts at Rs 36.32 crores and disbursements at Rs 36.22 crores leaves a nominal surplus of Rs 10 lakhs. The overall deficit will thus be Rs 16.16 crores as against Rs 25.86 crores budgeted in 1970-71. The Chief Minister has made the following proposals to reduce this gap: (i) removal of the present exemption from land tax on holdings below two acres and (ii) reduction of the minimum extent of holdings on which plantation tax is leviable from two hectares to one hectare. Each of these two proposals will fetch an additional income of Rs 50 lakhs. The imposition of a tax on non-agricultural lands in the urban areas in substitution of the present land tax will yield an additional amount of Rs 1 crore. The Chief Minister has also proposed to increase the minimum rate of contribution of the Government employees to the provident fund from 8 per cent to 10 per cent of the basic pay and this will increase the capital receipts by Rs 1 crore. The new proposals of resource mobilisation will yield Rs 3 crores in the year and the overall deficit would still be as high as Rs 13.16 crores. The 1971-72 Annual Plan outlay of Kerala is Rs 61 crores and it is higher by 22 per cent than the anticipated expenditure in 1970-71.

Jammu and Kashmir

THE 1971-72 budget presented by the Finance Minister, Mr G. L. Dogra, to the State Assembly on March 18, reveals an overall deficit of Rs 50 lakhs. The revenue receipts will be Rs 74.36 crores and the revenue expenditure will be Rs 70.47 crores. Thus, the revenue account will have a surplus of Rs 3.89 crores which would be larger than the budgeted surplus of Rs 1.94 crores in 1970-71. The capital expenditure will be Rs 26.26 crores against the capital receipts of Rs 21.87 crores, resulting in a deficit of Rs 4.39 crores. Thus, on an overall basis, there would be a deficit of Rs 50 lakhs. In 1970-71 the overall deficit was budgeted at Rs 57 lakhs. The Finance Minister has proposed six taxation measures to cover this small budgetary gap: increase in sale price of country liquor and retail fee on foreign liquors; increase in the sales tax on luxury goods from 10 per cent to 12 per cent; increase in taxes under the Motor Vehicles Act; a 10 per cent increase in the stamp duty on conveyance of property; increase in passenger tax from 20 per cent to 25 per cent and tax on properties. These measures would yield an additional revenue of Rs 40 lakhs and the remaining deficit of Rs 10 lakhs would be covered by more efficient tax collection. As compared with the anticipated expenditure of Rs 29 crores on the 1970-71 Annual Plan, the outlay of Rs 31 crores for 1971-72 Annual Plan is higher by about 7 per cent.

THE WEEK

SHEIKH Mujibur Rahman declared the eastern wing of Pakistan "the sovereign independent State of Bangla Desh" on March 26 and a provisional Government headed by the Liberation Army Chief, Major Zia Khan, was set up on March 28. Pakistani army, dominated by the western wing, is using its full might to put down the rebellion. According to an Associated Press correspondent the army used American supplied M24 tanks, artillery and infantry to destroy large parts of Dacca and the correspondent estimated that at least 7,000 Bengalis died in Dacca alone in the two days and nights of shelling. All foreign correspondents have been ordered out of East Bengal and a strict censorship has been enforced. During the whole of the week fierce fighting between the Pakistani troops and Awami League freedom fighters was reported from various parts of Bangla Desh. According to clandestine radio broadcasts the rural areas were mostly under the control of the liberation forces. (See also Editorial.)

The two Houses of Parliament passed unanimously a resolution on March 31 expressing the solidarity of the Indian people with the 75 million people of East Bengal fighting for the establishment of democratic freedom. The resolution called on the Governments of the world to prevail upon the Government of Pakistan "to put an end immediately to the systematic decimation of people which amounts to genocide."

The Foreign Trade Minister, Mr L. N. Mishra, announced in the Rajya Sabha on April 1 that the Government proposed to raise the reserve quota for production of coarse varieties of cloth from the present 25 per cent to 40 or 50 per cent of the capacity of each mill. The fine for not producing coarse cloth according to the stipulated reserve quota would also be raised from 6 paise to 25 paise per metre.

The Hitendra Desai Ministry in Gujarat tendered its resignation on March 31 following massive defections from the Congress (O) Legislature Party.

Mr T. N. Singh, Chief Minister of Uttar Pradesh, tendered the resignation of his Government on March 30 following the Government's defeat in the State legislature. An opposition amendment to the Governor's address was carried by 229 votes against 184 in the Assembly. The Governor, Mr B. Gopala Reddy has invited the Congress (R) leader, Mr Kamalapati Tripathi, to form a Government.

President's rule was imposed on March 25 in Mysore on the recommendation of the Governor, Mr Dharma Vira. The Assembly has been suspended to be re-activated if the chances of forming a government improve after some time.

Mr K. Brahmananda Reddy, the Chief Minister of Andhra Pradesh, announced on March 27 that the Andhra Pradesh Government does not propose to hold a mid-term election to the State Assembly.

The 15-day lock-out in the Indian Airlines was lifted on March 27. The decision followed an agreement with the four labour unions reached at the instance of the Union Labour Minister, Mr R. K. Khadiolkar.

The Union Cabinet cleared on March 27 the issue of industrial licence for the Tuticorin fertiliser plant of the Southern Petro-chemical Industrial Corporation. The plant will have a manufacturing capacity of 1,100 tonnes of ammonia per day and the project will be based on naphtha as the feed-stock.

The Supreme Court upheld on March 30 the Constitutional validity of the Gold Control Act 1969, except for Section 71 which was declared invalid. The section provides for the confiscation of gold in respect of which any provision in the Act, rule or order made thereunder, has been contravened.

The India-Pakistan/UK and Continent Conference has decided to reduce the surcharge at present being levied on all export and import cargoes handled at the port of London from 25 per cent to 15 per cent. The cut will be effective from April 1.

The import policy for the next financial year will be announced on May 1. The 1970-71 import policy will continue to be in force till that date.

The Lok Sabha extended on March 30 the life of the Import-Export Act indefinitely by passing the Import Export Control (Amendment) Bill.

Britain cut her Bank rate from 7 per cent to 6 per cent effective from April 1.

West Germany cut her Bank rate from 6 per cent to 5 per cent on March 31.

State budgets

The Tamil Nadu Chief Minister, Mr M. Karunanidhi, introduced on March 25 in the State legislature the budget for 1971-72. The budget shows an overall deficit of Rs 12 crores on revenue and capital accounts.

The Rajasthan Finance Minister, Mr Mathurdas Mathur, presented the budget to the State legislature on March 27. The budget shows overall deficit of Rs 25.21 crores.

The West Bengal interim budget presented to the Lok Sabha by the Minister of State for Finance, Mr V. C. Shukla, on March 27 shows a deficit of Rs 28.60 crores on revenue and capital accounts.

The Mysore interim budget was presented to the Lok Sabha on March 27 by

Mr V. C. Shukla. The budget shows a net deficit of Rs 14.46 crores.

The Orissa interim budget presented to the Lok Sabha on March 27 by Mr V. C. Shukla shows an overall surplus of Rs 33 lakhs.

The Chief Minister, Mr Farook Marikar, presented to the Pondicherry Assembly the budget for 1971-72 on March 27. For the first time, the gross expenditure of the Union Territory crossed the Rs 10-crore mark.

In Parliament

Mr G. G. Swell was elected Deputy Speaker of the Lok Sabha on March 27.

Mr L. N. Mishra, the Union Foreign Trade Minister, said in the Lok Sabha on March 31 that the Government's decision on the report of the Tariff Commission on nylon yarns will be announced within two to three weeks' time.

The Rajya Sabha approved the railway budget on March 27.

The Lok Sabha passed the interim Budget and the Finance Bill on March 27.

Money easy

Conditions in the Bombay short-term money market eased as of Wednesday. Demand for funds was maintained and interest rates closed firm. In the inter-bank call section, both fresh money and renewals were reported at 10 per cent. In the Madras market the rate ruled at 11 per cent.

Price index up

During the week ended March 13, 1971 the official Index Number of Wholesale Prices (base 1961-62=100) edged up by 0.4 per cent to 182.4. At this level the index was 3.8 per cent higher than its level a year ago.

PEOPLE

MR Harish C. Jain of Jaisons Advertising has been re-elected President of the Advertisers Club of Bombay.

Mr K. Hartley took over as Managing Director of Indian Oxygen on April 1.

Mr K. R. Podar has been elected President of the Employers' Association of Rajasthan for 1971-72.

50 years ago

In the House of Commons the other day, replying to Colonel Wedgwood, Mr Montagu stated that the Government of India proposed to introduce a bill with regard to the registration and protection of trade unions, after consulting local governments. Colonel Wedgwood asked for an assurance that the bill would prevent trade union executives being sued for damages, caused by a strike. Mr Montagu replied that he was unable to give any further information. Sir Thomas Holland, President of the Board of Industries, on behalf of the Government of India, has promised legislation defining the status of

trade unions in this country as soon as practicable. That this definition will not be long delayed is borne out by Mr Montagu's reply to Colonel Wedgwood. At a meeting of the Legislative Assembly in Delhi early last month Mr N. M. Joshi who represented Indian labour at the Washington conference, moved: "That the Governor General in Council should take steps to introduce at an early date in the Indian legislature such legislation as might be necessary for the registration of trade unions and trade union officials from civil and criminal liability for bona fide trade union activities."

From Our Own Correspondents

WHEAT PRICES

Vain plea for reduction?

NEW DELHI

AS in the past, the Agricultural Prices Commission has made out a strong case for a downward revision of the procurement price for wheat in the 1971-72 season. Its arguments are not new, but it has put them forward more forcefully than ever before. The Commission's main recommendation that the procurement price of indigenous red wheat should be reduced from the existing level ranging between Rs 71 and Rs 74 to Rs 68 and of the indigenous white variety and Mexican wheat from Rs 76 to Rs 74 has been motivated by the important consideration that in the alternative the issue price of wheat will have to be raised and this burden will fall largely on the poorer sections of the people.

The Commission in its earlier reports had examined the implications of a steady diminution of the content of imported wheat in the wheat released through the public distribution system. Since the margin between the procurement and the issue prices has been narrowing with the progressive decline in PL 480 wheat imports in recent years, it will become too narrow to permit the public distribution system to operate without any loss if the imports are totally stopped after 1971 as the Government has decided to or even if they are drastically reduced. By selling the imported wheat which is much cheaper than domestically-procured wheat at the same price as the latter, a cushion was available for absorbing the losses of the distribution system. That cushion would now practically disappear. If the procurement prices remain unchanged, the Commission has estimated that Government will have to subsidise its food distribution operations to the extent of Rs 35 crores in order to be able to sell wheat at the existing issue prices which, in the interests of the vulnerable sections of society and price stabilisation, should not be allowed to rise. Obviously, a subsidy of this order will be difficult for the Government to provide, and the Commission, therefore, has rightly plumped for lower procurement prices.

This would, of course, hurt the big farmers. But, as the Commission has argued, since they have a larger marketable surplus than the smaller ones the burden of a downward revision of these prices will fall more on those who have the capacity to bear it. It has also made the useful suggestion that the stage has been reached when these farmers could be helped better through non-price measures like the provision of better extension service which will contribute to greater productivity and reduced input costs. While recognising that any precipitate reduction in procurement prices will not be practicable, the Commission feels that it is unfair to make those dependent on the public

distribution system to continually pay for the increasing cost of distribution consequent on the decline in concessional food imports.

Between 1964 and 1970 the issue prices for the imported and Mexican varieties had more than doubled and thereafter they had been further raised in the case of white and amber varieties of indigenous and Mexican wheat. On the other hand, procurement prices were substantially increased until 1968-69 and have since remained unchanged despite the downward trend in market prices in recent years. The time has therefore come for bringing about at least a marginal downward adjustment of procurement prices. However, it is doubtful if the Government will heed the advice of the Agricultural Prices Commission, particularly when elections to several State Assemblies are not far away.

The Commission has suggested a procurement target of four million tonnes during the coming season. Since the Government is committed to ending concessional imports of foodgrains after 1971, an important objective of its food policy should be to step up domestic procurement to meet as far as possible the requirements

of public distribution. This should enable it to utilise the food imports during the current year for augmenting the buffer stock. After making allowance for operation stocks the Commission has estimated that the size of the buffer at the end of 1970 would be 3.4 million tonnes or about one million tonnes more than the stock at the close of the previous year.

In its report the Commission has referred to certain developments which, it says, are suggestive of the persistence of imperfections in the market despite the removal of restrictions on the movement of wheat between different parts of the country. Although wheat prices on the whole showed a downward trend during last year, the extent of decline was far from even. For instance, the price fall was greater in Uttar Pradesh than in the adjoining State of Bihar. In Madhya Pradesh the prices registered a significant fall. But they remained nearly stable in Maharashtra and Gujarat. In the result the inter-State disparity in prices as between the adjoining States of Uttar Pradesh and Bihar and Madhya Pradesh, on the one hand, and Maharashtra and Gujarat, on the other, widened noticeably in 1970-71. As the Commission has pointed out, if the benefits of the wheat revolution are to be derived by consumers in all areas, the imperfections in the market have to be corrected, and the Food Corporation of India has an important role to play in this. □

WEST BENGAL

CPM eclipsed by Democratic Coalition

CALCUTTA.

THE non-Marxist Democratic Coalition Ministry will be sworn in on April 2, with Mr Ajoy Mukherjee as Chief Minister and Mr Bejoy Singh Nahar, the Ruling Congress leader, as Deputy Chief Minister. This announcement was made by Mr Nahar on Tuesday. Names of the Ministers have not been announced yet but Mr Mukherjee will give the Governor a list of Ministers a few hours before the ceremony. Till Tuesday evening Mr Mukherjee had not received formal letters from the Ruling Congress, the Muslim League and the Praja Socialist Party authorising him to meet the Governor in connection with the Ministry formation. The Forward Bloc leader, Mr Apurba Lal Majumdar is likely to be elected Speaker of the Assembly and Mr Pijush Kanti Mukherjee of the Ruling Congress is the likely choice for Deputy Spokeship.

After days of negotiations and bargaining behind the scenes, some kind of a viable front against Communist (Marxists) has at last emerged. This Democratic Coalition is made up of the Congress (R), Bangla Congress, Muslim League, Gorkha League, SSP and a PSP faction. The total strength of the elected representatives of these parties are: Congress (R) 105,

Bangla Congress 5, Muslim League 6, Gorkha League 2, SSP 1 and the PSP faction probably 2, or 121 in all. But they will have the committed backing, although from outside, of the CPI (13) and Forward Bloc (3), which means a total strength of 137. The Jharkand Party and the Congress (O) which have two members each are also expected to provide support from outside, and these will ensure the coalition an absolute majority in a House of 280 whose three seats will be filled up later. The three seats vacant were countermanded following the murder of candidates including the much respected Forward Bloc leader, Mr Hemanta Kumar Basu.

The problem of sorting out portfolios and allocating seats in the Ministry still remains, but considering the pace at which efforts are being made, this may not take longer than a week, unless there is a last-minute hitch. Tentatively, the strength of the Cabinet has been fixed at 25 including 20 Ministers of the Cabinet rank. The Congress (R) will have 14 Cabinet Ministers (one representing each district) and four Ministers of State. The Muslim League will have two Cabinet Ministers and a Minister of State. Bangla Congress will be represented by Mr Ajoy Mukherjee but the party's demand for a second seat

in the Cabinet has been turned down. Other constituents will have one Cabinet post each, but should the CPI and the Forward Bloc come in later, the Congress (R) will surrender three Cabinet Ministers, posts and one of Minister of State.

The Coalition is still to announce its final common minimum programme. The CPI insistence that there should be no use of police force in the case of legitimate trade union demands is said to be causing some difficulty both of terminology and definition. However, Mr Biswanath Mukherjee, the CPI leader and a former Minister of the United Front Government, is now drafting one. □

GUJARAT

Defectors dislodge a stable ministry

AHMEDABAD.

THE fall of the Congress (O) Ministry, headed by Mr Hitendra Desai, on Wednesday marks the end of an era. The resignation of Mr Desai was inevitable following the massive defections from the party. The impact of the landslide victory of Mrs Indira Gandhi on the strong Congress (O) in Gujarat was so great that the trickle of defection noted on the first day of the Vidhan Sabha session developed into a flow. All efforts to stem the tide failed as impatient groups of legislators crossed over to Congress (R) and reduced the strength of the ruling party to 66 at midnight on Tuesday. The 21-member Swatantra group was seriously divided and some, even those who wanted to support the Ministry, expressed their inability to do so when they found that even their support would not save the Ministry.

With the fall of the Ministry which was known for its efficiency and integrity—rare commodities in modern India—Gujarat apparently leaves behind a long period of rule by the small group of senior Congress leaders. It is now certain that the complexion of the Congress (O) would be materially changed with the second generation of leadership decisively taking over the leadership of the party. Mr Hitendra Desai who continued to remain loyal to the old leadership till the last while trying to serve the newer objectives was naturally the victim of the conflict. He rightly said that he would not like to become the Chief Minister again even if the two Congress sections were to reunite.

The formation of an alternative Ministry will be a difficult task according to indications available today. It is however possible that many more Congress (O) members might cross over to enable the Congress (R) to secure the majority. Already the strength of Congress (R) has risen to 64 as against 66 of the Congress (O). The possible infighting among the Congress (R) leaders for position is yet another factor that might hamper the process of change-over. □

UTTAR PRADESH

Out goes faction-ridden SVD Ministry

LUCKNOW.

THE 178-day-old SVD Ministry in Uttar Pradesh came to an end earlier this week when the Governor accepted the resignation of the Chief Minister, Mr T. N. Singh, on March 30 and invited the Congress (R) leader, Mr Kamalapati Tripathi to form a government. The end came when an Opposition amendment to the Governor's address was carried by the State legislature by 229 votes to 184.

The massive defections to the Ruling Congress from SVD partners in the last few days had pushed the SVD Government into a precarious position. The erosion affected most the Congress (O), BKD and SSP, three of the four constituents of the SVD. Nine members of the Council of Ministers tendered their resignation from the Government and crossed the floor even before their resignations were accepted. Luckily, the financial business of the State legislature was completed last week with the passage of second supplementary demands and vote-on-account appropriation bills by the Upper House.

The Chief Whip of Legislature Congress (R) Party, Mr Narain Datt Tewari, met the Governor, Mr B. Gopala Reddy, on March 27 and submitted his party's list of 212 members in the House of 426, at present having effective strength of 415. Mr Tewari pleaded that the SVD was in a minority and its Government should be dismissed.

The Congress (R) leadership was out to topple the SVD Government by throwing open its door to the defectors from various parties constituting the Samyukta Vidhayak Dal. Floor-crossing started on a large scale two days after the start of the State legislature's budget session on March 22 and by March 26 evening about 35 legislators had changed sides. Mr Saligram Jaiswal, MLC and former Chairman of the State SSP, held aloft the banner of revolt against his party bosses for having allegedly brought the SSP into disrepute by joining the grand alliance and allowing its members to remain in Government in spite of the directive by the SSP General Secretary, Mr George Fernandes, that the SSP should pull out of the SVD Governments in UP and Bihar. Mr Jaiswal and nine legislators, including two Deputy Ministers, publicly announced their decision to resign from the SSP and join the Congress (R). The electoral verdict in the Lok Sabha elections was the main reason given by the Congress (O) and the BKD members for leaving their respective parties. □

ORISSA

United front foils Congress (R) strategy

BHUBANESWAR.

THE Ruling Congress which unexpectedly became the largest single party with a strength of 51 in the State Assembly of 140 is finding itself in an irksome situation. The chance to regain power is

slipping out of its hands with the formation of the United Front comprising the Swatantra Party (35), the Utkal Congress (32) and the Jharkhand Party (4), supported by three independents. The 81-year-old Mr Biswanath Das, a former Uttar Pradesh Governor and also the first Chief Minister of the State in 1937, has been elected leader of the Front. He will present a list of 72 members who have pledged their support by affixing their signatures on the list. This is quite a comfortable majority for the Front since, with four by-elections pending, the Assembly has a strength of only 136. Meanwhile, the Governor, Dr S. S. Ansari, has personally met a few members whom the Ruling Congress had reportedly claimed as its supporters and has asked them to sign in his presence with a view to verifying the signatures in the Congress (R) list.

The Ruling Congress tried to form a one-party Government assuming support from the Praja Socialists (4), the Right Communists (4) and 2 out of 4 independents besides expecting defections from the Utkal Congress to fill up the gap. Dr Harekrishna Mahatab who was "unanimously" elected leader through the consensus ascertained by the AICC observer, Mr Darbara Singh, with the assistance of the Union Minister, Mrs Nandini Satpati, asserted his claim to form the Government as leader of the largest party in the House. The Governor, obviously, unyielding in his stand that the leader should satisfy the test of majority and not improve his strength after assuming power, recommended the continuation of President's rule.

The Utkal Congress found it futile to carry on a dialogue with the Ruling Congress either for merger or coalition and struck overnight a dramatic bargain with the Swatantra Party and the Jharkhand Party for forming a United Front under the leadership of Mr Biswanath Das, who, in spite of his age, is still active as an unattached leader. With their ranks still steady without the danger of defections, the United Front is confident that the Governor will call Mr Das to form the new Ministry and that he would be in the saddle early in April. □

MINERALS

A fresh look at exploration techniques

NEW DELHI.

THE symposium on exploration techniques for metalliferous deposits organised by the Indian Geophysical Union at Khetrinagar (Rajasthan) last week was timely and useful in that the geologists and mining engineers from different parts of the country who took part in the symposium had an opportunity to take a fresh look at the existing techniques and suggest ways of modifying them in order to achieve quicker results. Though India can derive some satisfaction from the progress she has made in mineral development, she is extremely deficient in base metals, especially copper, lead, zinc, nickel and tin. The import of copper is expected to go up from the present level of Rs 45 crores to Rs 88 crores and of the

other metals from Rs 6-7 crores to Rs 10-20 crores each.

This underscores the urgent need to exploit and develop the mineral resources of the country. The speedy development and growth of indigenous production of metals depend largely on the application of efficient techniques of exploration. This way it will be possible to make a fair assessment of the resources in the shortest possible time which in turn is necessary for taking sound investment decisions and planning effectively the development of mineral production. Unfortunately in this country basic metal mining projects have taken far too long to reach

the stage of commercial production. However encouraging be the results obtained from geophysical surveys, aerial or otherwise, it is the follow-up action on the ground that is more important.

In the advanced countries mineral exploitation is no longer considered to be a somewhat speculative activity. Nor are the stakes in such exploitation regarded to be high. By the adoption of a scientific approach to the exploration and development of mineral deposits they have been able to reduce investment risks and find ores which conform more or less to expectations in respect of both quantity and quality. Indian geologists and mining en-

gineers would therefore do well to keep themselves abreast of the new techniques and processes evolved in these countries. By judiciously selecting and adopting proper techniques which are relevant to a particular deposit, quicker results can be achieved in the mining field. During the last decade many small and medium sized mineral deposits which could collectively contribute to an appreciable increase in production have been discovered. It would be worthwhile concentrating attention on these. At the same time suitable techniques must be evolved to keep their exploration cost down. □

REPORT

THE WORLD

From Our Own Correspondents

ASEAN: Getting into gear

MANILA.

IF the Association of South-East Asian Nations (Asean) decides to go mobile, literally on four wheels, it might be the most tangible evidence that regionalism has come to stay in South-East Asia. Because, regionalism and the breakdown of national tariff barriers is the core of Ford Motor's "complementation project" for the assembly of inexpensive cars for Asian masses. The foreign ministers of the five Asean members—Indonesia, Malaysia, the Philippines, Singapore and Thailand—were given the outlines of the proposal when they met in Manila for the third annual meeting of this regional economic grouping. A senior Ford official flew in here to brief them on the plan which will involve the manufacture of certain automotive parts in each country which can then be exchanged tax-free for components made in other Asean countries enabling each to produce cars at a price the man in the street can afford.

The proposal has been referred to the Asean committee looking into tariff reduction plan which will report back to the ministers. But automobile manufacturers in the region are apprehensive that unless a decision is taken without much delay, car firms might go it alone which would mean the end of the regional project. The scheme demands a certain rationalisation and allocation to each country the parts it can produce most economically. And therein comes the rub. It will be a crucial test to the claim made by Malaysia's Deputy Prime Minister, Dr Ismail, that the Asean had passed the stage in which co-operation was based on the lowest common factor of everybody gaining and nobody losing, and was moving on to the more sophisticated phase "in which we are prepared to lose a little in an exercise of co-operation".

Though the Ford project is certainly imaginative, it was only one of the several proposals for economic co-operation considered by the ministers. Indeed, before them was a preliminary UN study identifying practical areas for economic co-operation. The areas listed for collective development are, mainly, basic chemicals, fertilisers,

petrochemicals, synthetic fibres, yarns and plastic materials; paper and newsprint; pharmaceuticals; steel; simple agricultural machinery; components for the electrical manufacturing industries and automobile parts and components. A more detailed report by the UN research team is expected to be available to the Asean by the middle of this year.

The foreign ministers were also briefed on concrete proposals for the establishment of a regional investments bank and the prospects of more active participation by the private sector in Asean activities. The bank proposal, by the Bancom Development Corporation, a Philippine-based international financial institution, aims at accelerating the capital formation process in the region and mobilising both regional and outside savings for regional industries. The Bancom proposal for the Asean Investments Bank is expected to lead to the establishment of a regional stock exchange where issues of local companies and governments are provided primary and secondary markets, and are quoted and traded in various currencies of the region.

Another possible related project is a regional secondary market to deal in external currency funds, Euro-currencies, or Asia-currencies, whose aim would be to augment the short-term sources of funds available to regional industries for working capital purposes.

According to Bancom President, Mr Sixto Roxas Jr, the goals of these projects would be to accelerate the mobilisation of regional savings into investment capital, and redirect regional funds from the usual Western country outlets into safe and profitable South-East Asian ventures, thereby keeping funds within the region.

Among the services the projected investments bank proposes to offer to the Asean nations are financial consultancy to governments and corporations, underwriting and private placement of local and regional issues within and outside the region, and investment advisory or management services for local clientele desir-

ing regional or international investment exposure. Bancom envisages that the projected bank would be supervised by a high-powered, multi-national management group of Asean nationals. Asean experts appear to be convinced that the proposed bank will not duplicate the work already being done by the World Bank or the Asian Development Bank nearer home.

On the question of closer co-operation with the private sector, the Asean ministers accepted the proposal by the South-East Asia Business Council (SEABC), an organisation of business executives in the region. The council proposes to set up working arrangements at top level with Asean states with a view to attracting international investments into the region. The SEABC has agreed to provide feasibility studies of major economic and business endeavours and take steps to attract international investments into the region.

Apart from these relatively ambitious proposals, the ministers also agreed on several less spectacular projects aimed at increasing multilateral co-operation. They approved some 120 projects in tourism, industry and commerce, science and technology, mass media and communications, food production and supply, civil air transport, transportation and telecommunication, shipping and meteorology. Tourism is expected to receive a boost with the decision to admit into each other's territory non-scheduled commercial plane flights to pick up or unload passengers and cargo without disrupting regular air services.

While national postures on important economic issues involving regional co-operation may not have softened very much, despite Dr Ismail's optimistic declaration, the mood in Manila was visibly more relaxed than at the last two meetings in Malaysia and Jakarta. Both these conferences were overshadowed by the dispute between the Philippines and Malaysia over Manila's claim to Sabah. Despite some last-minute attempt by some of the more lively Manila papers to inject some controversy by their "expose" of alleged Filipino infiltrations into Sabah, it made no great impact on the delegates. In fact, President Marcos is believed to have given private assurances to Dr Ismail that the Philippines had

made no attempt to infiltrate agents into Sabah.

Another healthy move was to postpone any decision on admitting new members. Cambodia's Lon Nol regime was keen to obtain membership while South Vietnam was waiting on the wings. Despite some intense canvassing on behalf of these two war-torn countries, the ministers finally decided that Asean should consolidate before expanding.

If one looks at mere tangibles, the Asean, founded in 1967, cannot claim to have achieved much. But nationalistic barriers against regional co-operation are less strong today and there is greater realisation that economic and social co-operation perhaps offers the best solution to the region's complex problems. □

EEC

Threat to India's trade with UK

BRUSSELS.

BRAITAIN'S entry into the Common Market will accelerate and ultimately complete a process that has been going on for the last 20 years or so—the dissolution of the British Commonwealth. The most tangible evidence of the Commonwealth's existence is, of course, the network of trading arrangements linking the various countries to the UK, but it is a network whose importance has diminished considerably in recent years. Last year the UK's exports to the EEC exceeded those to the Commonwealth for the first time; her imports from the Common Market also rose substantially, so that the time is not far off when the EEC will replace the Commonwealth as the UK's main trading partner.

This trend, which is the result of an attempt by the UK and other Commonwealth countries to seek new trading partners, is noticeable in Indo-UK trade also. Between 1964 and 1969 India's exports to the UK fell from \$359 million (Rs 269.25 crores) to \$216 million (Rs 162 crores) and her imports from \$364 million (Rs 273 crores) to \$147 million (Rs 110.25 crores) although her overall foreign trade showed no such decline. It was the dwindling importance of the UK as a trading partner for not only India but also other Commonwealth countries which led Common Market experts here to conclude that Britain's entry would not harm their trade interests, especially if provision was made for a transitional period.

Such optimism seems unjustified at first sight. According to reliable estimates, over 40 per cent of India's exports to the UK would be unfavourably affected by the entry. The plain truth is that on entry Britain will have to adopt the common commercial policy of the Six. Even if the elimination of Commonwealth preferences and the adoption of the common external tariff is spread out over 4 to 5 years (as has been agreed to by both sides), the effect on India's exports to the UK is bound to be unfavourable, for Britain is being asked to replace a system designed to encourage imports from Commonwealth

countries by one which gives preferential treatment to other Common Market countries, the associated states and countries such as Spain and Israel. The injustice of this is compounded by the fact that for most Commonwealth countries, including India, the UK is far more important as a trading partner than the EEC. (Thus in 1968 India's exports to the UK were twice as large as to the Community—\$283 million (Rs 212.25 crores) against \$142 million (Rs 106.5 crores).)

Fears for India's exports to the UK are based on the changes which Britain would have to make in her import policy after joining the Community. At present India, along with other Commonwealth countries, enjoys preferential treatment for a very wide range of products; in many cases her exports to the UK are not subject to import duty, in others, duty is levied at a preferential rate. Under the provisional agreement reached here on February 2, Britain will have to bring her tariffs into line with those of the EEC in four equal stages.

In practice, this means that 12 months after entry the UK will have to reduce the difference between these two sets of tariffs by 20 per cent—and each year thereafter by an identical amount, the last adjustment being made 4½ years after entry. Thus if the preferential rate in the UK is zero and the rate in the EEC is 10 per cent, within three years of entry Commonwealth exports to the UK would be subject to a 6 per cent duty. Unfortunately this is not the only adverse factor India's exports will have to contend with. Even while Britain will be raising her tariffs on imports from Commonwealth countries, she will be reducing them on imports from other Common Market countries and the associated states.

Broadly speaking, the preferences enjoyed by Commonwealth exporters in the UK today will be gradually transferred to these countries if the negotiations for entry succeed. The new situation confronting Indian exporters could prove more unfavourable to them for a number of products. This is especially true as regards tropical products, for which the associated states will enjoy duty-free entry in the UK market while India will be subject to the full common external tariff. The associated states will also have a substantial advantage over India as regards tropical fruits and juices, for Britain will have to replace the preferential rates granted Commonwealth exporters by the rates levied in the EEC, which go from 12 per cent to 34 per cent. And now that the Six have agreed to allow tobacco from the associated states to enter the Community duty-free, Britain will have to follow suit. As production of Virginia flue-cured tobacco is growing very rapidly in some of the African states, Indian exporters will be hard pressed to retain their share of the market (especially as the East African states will continue to enjoy preferential entry by virtue of their association agreement with the EEC).

One of the arguments put forward by the Six in support of their relatively optimistic approach to the problems of developing Commonwealth countries is the recent agreement on generalised preferences. They point out that both the UK and the Community will have begun to implement

their offers long before Britain's entry into the EEC, so that countries such as India will be enjoying duty-free entry for their exports of semi-manufactured and manufactured products in both the UK and the Common Market at the time of entry. As a result, entry will have little or no repercussion on India's exports to the UK market.

Unfortunately for India, the position is a good deal more complicated than the spokesmen for the Six will admit. It is not clear just when the various schemes will be implemented. The European Commission in Brussels is prepared to implement the Community's scheme from July 1 but at least one or two of the member states would prefer to wait for the Americans to implement their scheme. But the Nixon Administration has yet to send the necessary legislation to Congress, after which another 6 to 12 months may elapse before the Bill becomes law.

Once Britain joins the EEC she will have to bring her scheme into line with that of the Community, despite the fact that it is the more generous of the two. But the Six are unlikely to abandon their scheme, which is based on import ceilings. Entry therefore is bound to result in a reduction in the opportunities for duty-free entry available to developing countries—and could prompt the Americans to revise their own scheme downwards in the best tradition of burden-sharing.

This is the overall picture as regards semi-manufactured and manufactured products. It is even more complicated—and uncertain—as regards sensitive products such as textiles. The British, who plan to introduce a 15 per cent import duty on textiles from the Commonwealth countries also as from next January, have excluded textiles from their preferences scheme. The Six, on the other hand, have included them—but in such a way that in practice only a small proportion of India's textile exports to the EEC will enter duty-free.

What will happen once Britain joins the Community remains an open question. The Common Market textile industry will, no doubt, renew its campaign to force the member states to remove textiles from their scheme; the European Commission, on the other hand, will probably press for the British to allow duty-free entry on terms identical with those of the Six's original offer. In either case, the result will be quite unsatisfactory for countries such as India. (New Delhi would have been secretly pleased with the British decision to put cotton textiles on the exceptions list had the latter not decided to abolish duty-free entry for Commonwealth countries.)

Jute manufactures will also pose something of a problem. The British have offered duty-free entry for jute goods and so have the Six—provided they can reach an agreement with the two main suppliers, India and Pakistan. Although such agreements were in fact concluded by the EEC with each of the two Asian countries, the Indians have threatened to denounce theirs unless they receive a larger quota. The position is much the same in the case of coir products also: the Six are prepared to grant duty-free entry but only after they have reached an agreement with India. □

BUSINESS REPORT

JUTE

Pakistan crisis boosts Indian hopes

LONDON.

THE new political crisis in East Pakistan has provided an unexpected opportunity for Indian textiles to regain their former share of the British market. Indian jute mill owners who in recent years have taken a severe beating from the cut-price Pakistani competition will soon be getting a flood of new orders from British merchants.

"This should give the Indian mills a new lease of life," was the verdict of the director of a leading London merchant house which sells jute products all the world. "It looks as if the business will go to India now for as long as the political strife in East Pakistan lasts. Before this happened, the market in India was rather depressed; but now it is getting firmer."

The British buyers of jute goods have been neglecting the traditional Indian market mainly because it has been overpriced. They can buy cheaper—and, some say, better quality—from Pakistan. There the jute mill owners benefit from a 35 per cent export bonus which is really an export subsidy and gives them a clear advantage on world markets.

In hard cash, Pakistan's export bonuses have allowed the jute manufacturers to undercut the Indian competition by a regular one or two per cent. "Pakistan gets most of our business because it is cheaper. India has been getting the left-overs for the past few years," a London dealer explained. "The difference in price is always quite marginal. But whatever the Indians quote, the Pakistanis manage to quote just a little less."

In the past few years India has almost lost all her British market for sacking. The Pakistani product is nearly a shilling a yard cheaper, so naturally the buyers pass up the Indian offerings. In 1968 India sold about 16,000 quintals of jute sacks and bags worth £234,538 (Rs 42.22 lakhs) to Britain. By last year this side of the market was slashed 90 per cent to about 1,250 quintals worth £31,985 (Rs 5.76 lakhs). Woven jute fabrics—hessian and carpet backing—have also been hard hit. Imports into Britain which were worth around £4 million (Rs 7.2 crores) in 1968 dropped to £2.3 million (Rs 4.14 crores) the following year; they slid further in 1970 to £1.8 million (Rs 3.24 crores).

In recent months there have been signs that India and Pakistan have been overproducing hessian. And there were some fears that a severe price cutting war would result if the market became over-weighted with surplus supplies. But if India continues to have the jute market to herself this year that particular problem should take of itself to India's advantage.

Although, at least for the short term, the jute market seems to be looking up

again, there is not much for the Indian cotton producers to look forward to. The British Government's decision to abolish Commonwealth preferences for cotton textile imports and apply a 15 per cent levy is a hard blow. Many experts believe it could knock India right out of the British market.

Even under the preference system—it is founded on the Indo-British Agreement of 1938—which allows cotton into Britain free of tariffs, India has struggled to hold her own against the cheaper competition. Exports acknowledge that India stands to lose more when the levy goes into force than either Hongkong or Pakistan.

At present the British market takes about 35 per cent of India's exports of cotton textiles worth about £16.5 million (Rs 29.7 crores). Indian officials in London estimate that if they fail to persuade Britain to abolish or reduce the threatened levy the majority of cotton producers will give up and move to more profitable markets such as South-East Asia and America. The loss in value of Indian cotton imports is expected to be between £10 million (Rs 18 crores) and £15 million (Rs 27 crores); most of this trade will be picked up by Japan and Portugal.

The levy is due to go into force at the beginning of next year. It is being introduced after strong lobbying by the British Textile Council, the statutory organisation of the Lancashire cotton industry. The council, which has also been experiencing hard times, claims that abolishing the preferences will give the industry "a more stable and predictable framework". Yet India has not come close to filling its quota of around 202 million square yards of cotton for three years.

The British Government says it recognises that India will suffer most hardship from the change-over to tariffs. There have been vague promises of some compensatory aid to cushion the blow. But after months of negotiations between officials of the two governments very little has been accomplished.

BANKING

Mr Talwar's plea for credit planning

BOMBAY.

IT is very rarely that the chairmen of the public sector organisations are known to express their frank views publicly. The statements of the Chairman of the State Bank of India, Mr R. K. Talwar, at the annual general meeting of the bank and at the press conference the same day last week are significant in this respect.

Though technically Mr Talwar was speaking as the Chairman of the biggest public sector bank his views have to be considered as those coming from the leader of the nationalised banking sector. Since the nationalised banking sector has undergone more or less the same experience during the last 21 months of bank nationalisation a consensus on some of the issues has emerged on the problems affecting the banks.

Mr Talwar touched on some of the vital aspects of the functioning of the banks. A large credit expansion has been brought about mainly in pursuit of a deliberate public policy in which the central banking authorities had assured liberal support to the banks to extend credit to certain priority sectors. However, to combat inflationary pressures the authorities curtailed the refinance facilities in the midst of the busy season. The banks, therefore, find it difficult to meet the demand for credit from their own resources. They have been put in a predicament in which they have to either deny credit to large and medium industries which will be detrimental to production and employment or to deny assistance to the weaker sections which goes counter to public policy. This was not entirely unanticipated as the demand for credit has been outstripping the deposit mobilisation for more than a year.

It was in this context that Mr Talwar has pleaded for credit planning. His contention is that the planning so far has been merely directional in nature. There is no quantitative allocation of the total flow of credit. He has pleaded for apportionment of credit among various sectors and sub-sectors so as to accord with plan priorities. In the social control era the Credit Council had been evolved and it was thought that this body would in due course of time examine the needs of various sectors and make allocations on the basis of available resources. However, when the banks were taken over the Union Government did not take any steps to activate the body or to reorganise it with the result that there has been no credit planning as such.

As regards credit to priority sectors what Mr Talwar said has been rather revealing. The repayment experience in the case of small industries sector by and large was satisfactory. However, in the case of agricultural advances, the recoveries were 80 per cent of the demand for payments due. The cost of making the funds available to the priority sectors was 11.5 per cent for small industries and 12.5 per cent for direct loans to agriculture. This excluded risk margin. As against this the interest earnings were at the rate of 9 per cent for small industries and 9.5 per cent for agriculture. Thus there is a substantial differential in the cost of funds and the income earned in the credit given to priority sector. The deterioration in banking services seems to be partly responsible for this state of affairs.

At the instance of the Finance Minister, a committee headed by the RBI Deputy

Governor, Dr R. K. Hazari is examining the question of giving preferential interest rates for the weaker sectors. The committee would no doubt take notice of these views. Having said this it is not yet clear as to why the SBI should have experienced such a high percentage of overdues. The co-operative institutions in the country have been criticised in the past for having overdues of 30 per cent or above. The experience of the biggest public sector bank with all its modern techniques of processing of loans has not been very satisfactory. This calls for a fresh examination of the strategy of financing agriculture through the co-operatives and the commercial banks. In fact, Mr Talwar has pleaded that the role of commercial banks can only be 'supplementary' and the responsibility must continue to rest mainly with the co-operatives. This is a significant development and is in line with the thinking of the leaders of co-operative movement in the country. The effective use of credit is vital to the banking system. Mr Talwar has admitted that it is difficult for the banks to create machinery at every office for processing of loan applications and subsequent supervision. The SBI is, therefore, selecting throughout the country about 150 centres in which the borrowers within a radius of 10 miles would be covered. The Bank is moving away from scattered lending towards intensification of area approach.

Mr Talwar has criticised the entry of the LIC and the Unit Trust in the call money market. The two financial institutions had been permitted by the RBI last year to invest funds in the call money market. The rationale behind the decision was that the surplus funds with the institutions should be available to banks who were hard pressed with resources and the institutions should also get a better return on their investments. The banks ascribe the rise of the inter-bank call money rate to 11 per cent to the LIC and the Unit Trust demanding higher price for their funds. The question is whether these long-term funds should be used for short-term purposes. The banks and the two financial institutions have conflicting interests. It is time to resolve this controversy.

Mr Talwar has referred to the fact that while the interest rate on advances has been going up the rate of interest on time deposits has not gone up. Bank rate increases in the past were justified on the ground of reward to savers in the economy. However, the Bank rate rise from 5 to 6 per cent in January this year has not brought about any such rise in the case of time deposits. The talk of reward to savers has been forgotten. Mr Talwar's stand is in contrast to the attitude of the SBI in the past when there was reluctance to raise deposit rates on the ground that deposits are not interest elastic. However, his suggestion that an increase in deposit rates may be brought about by some adjustment in lending rates may generate fresh thinking on this vital issue of augmenting savings.

Mr Talwar has made a reference to the stoppage of work at the banks causing lot of suffering to the customers. He has expressed the hope that a suitable machinery for the settlement of disputes would be evolved. □

Wages and productivity

MR Harish Mahindra, Chairman of Mahindra Ugine Steel Co, says that as a cushion against wage push inflation, a dynamically stable wage system should be devised under which workers are offered continuous increases in wages along with adequate rise in productivity. There are two alternatives to achieve this objective. The first is an authoritarian control over wage policy determination which may not be possible in a political democracy. The other alternative is the adoption of a national prices and incomes policy which would provide the necessary framework for the wage settlements at the industry or plant level. The chief merit of this policy is that it would help regulate the growth of dispensable income and reduce disparities in income. The kind of "partial national prices and incomes policy limited to selected sectors or industries," according to Mr Mahindra, is not impracticable. Some such experiment is worth trying as its results might give national prices and incomes policy a sporting chance to prove itself. Payment of wages by results or measured-day work or any other system could succeed only if it is tailor-made to suit individual units of production. Citing examples of units which had successfully done productivity bargaining and productivity deals, Mr Mahindra says there seems to be no clear thinking on the subject in India. The attitude should be that once a living wage had been granted to begin with, all future compensations offered, other than ex-gratia and bonus, should be on the basis of a rise in productivity. The extent of the rise in wages related to productivity may be subject to negotiations. The gain from increases in productivity could be shared equitably among labour, management and the capital.

Import of technology

Dr Bharat Ram, President, International Chamber of Commerce, says that if the country had to cope with modern trends no time should be wasted in adopting modern technology. Although for the home market labour-intensive industries are economic, for the export market the use of sophisticated technology is essential. The Government should freely allow the import of technology for export production which alone would enable our exporters to compete in the international market.

Industrial licensing and States

Mr V. G. Rajadhyaksha, the outgoing President of Bombay Chamber of Commerce and Industry, says that when a proposal for a new project or for the expansion of an existing one is received from a large industrial house or a foreign business house, it should be left to the State Government to decide on the social and economic relevance of the project. This includes whether the pro-

BUSINESS OPINION

posal satisfies the requirements of the industrial licensing policy and the Monopolies and Restrictive Trade Practices Act. The advantage of passing on these tasks to the State Government lies in the fact that the State Governments are ensuring the development of backward areas and are largely responsible for the welfare of small-scale units. The State Governments have also to handle the labour problems in the State. Mr Rajadhyaksha therefore suggests that the transfer of licensing authority to the States would go a long way towards ensuring a happy partnership between the Government, labour and entrepreneurs.

Railway mismanagement

Mr H. N. Mookherjee, Chairman, Indian Mining Federation, says that what is happening with the railways is something strange. The railways have dieselised and electrified most of their tracks, introduced box wagons and have extensively remodelled and expanded their various yards in order to increase operational efficiency and turn-round of wagons. But a wagon still remains idle on an average 19 hours in a day at the marshalling yard, goods shed or transit shed—its running time being limited to five hours a day. Even the railways admit that the turn-round of wagons is as slow as it was two decades ago. The railway authorities have not been able to provide a satisfactory explanation. Explaining the reasons for the deficit in the railway budget, the Railway Minister said in the Lok Sabha that the railways were not getting enough traffic for transport capacities built up during the Third Plan period. But such a statement, according to Mr Mookherjee, can hardly be reconciled with the stark reality of constant shortages to carry the coal.

Chemical industry's problems

Mr C. D. Thakkar, President, Indian Chemical Manufacturers Association, says that the unsatisfactory working of the IDPL plant and delays in implementing the Hindustan Organic Chemicals' plant has resulted in a drain of foreign exchange worth of Rs 25 crores. The delays which occurred in the licensing of new undertakings in the private sector have also been costing the nation dearly in foreign exchange. At the same time, the delays in commissioning some of the fertiliser plants are resulting in a foreign exchange loss of Rs 70 crores annually. It is, therefore, a welcome move, Mr Thakkar says, that the Government proposes to appoint task forces to remove obstacles in the way of expansion of public and private sector chemical units.

Commercial banks in India after nationalisation

By B. N. Adarkar

STRUCTURALLY the banking system in India has gained distinctly in strength and cohesion after nationalisation. The policies and working of the major nationalised banks have now been brought into closer harmony and co-ordination with those of the State Bank of India and its subsidiaries which, prior to nationalisation, moved in a somewhat different orbit. A better environment has thus been created for the formulation and implementation of monetary and banking policies.

While the security of deposits is better assured, a heavier responsibility is thrown on the management of nationalised banks to so conduct their affairs that there is a steady accretion to the banks' capital funds to absorb any losses, past or present, and thus to avoid an erosion of deposits. Even after nationalisation the return on investment will continue to be an important yardstick for measuring the performance of banks.

It is wrong to think that banks cannot earn a reasonable return on capital if they carry on their operations with due regard to their social obligations. Not all rural banks need run at losses, nor need the risk of loss on small loans be necessarily greater than on large loans.

If social objectives are accepted as an excuse for a lower return on capital, banks will have no incentive to combine social objectives with a high standard of management. Under the guise of social objectives losses may be incurred which will really be due to inefficient management. It is, therefore, essential to devise a management and accounting system whereby uneconomic operations undertaken on grounds of public policy are separately accounted for and banks' performance is judged by the rate of return earned by them on their normal operations.

While financial discipline is the essence of sound banking, monetary discipline is vital to the health of the economy as a whole. The commercial banks have a two-fold duty to perform: to put forth their best endeavour to mobilise deposits, and secondly to check extension of credit so as to avoid excessive borrowing from the Reserve Bank.

Thus, for a proper exercise of monetary discipline, all the three aspects, namely, deposit mobilisation, credit restraint and as its natural concomitant credit planning must be taken care of.

Unrestricted extension of credit out of created money can generate inflationary pressures and eventually do serious harm to the economy, however laudable is the purpose for which such credit is provided in the first instance. The major achievements of nationalised banks are in the realm of branch expansion, deposit mobilisation and extension of credit to agriculture, small-scale industry and certain other hitherto neglected sectors.

The current rate of branch expansion can be maintained without risk to the banking system only if adequate arrangements exist for training and orientation of branch managers, for proper choice of locations, for inspection of branches at suitably short intervals and for head office co-ordination and control.

It is, therefore, incumbent on the authorities to see that branch expansion programmes are accompanied by concurrent action to strengthen the internal organisation of banks, wherever it is weak, in these respects, and to fix branch expansion targets only after a careful examination of the personnel and other resources available to individual banks to manage a vast network of branches. Targets have their value as a means of pulling a system out of a rut and giving it a push, but thereafter performance should be judged more by quality than speed.

The economy needs a much higher rate of deposit accretion. However, the rate of deposit growth is partly a reflection of the rate of saving and beyond a certain limit bank credit cannot fill the gap between genuine savings on the one hand, and the investment needs, on the other. A shortage of bank credit is unavoidable in an economy suffering from a shortage of savings. If the fact that owing to an overall shortage of real resources, a cut in credit facilities is unavoidable even for genuine production purposes in some sectors were more widely appreciated, there would be less criticism and more willing acceptance of the credit policies and operations of the Reserve Bank and commercial banks.

The new bill market scheme will bring about a quicker turnover of funds between banks and their borrowers and greater mobility of funds between banks and within the money markets generally. To get the maximum benefit for the economy from the limited credit resources, it is essential that commercial and industrial borrowers should practise utmost economy of credit and accept a measure of discipline in regard to the payment of their current dues. I would, therefore, take this opportunity to appeal to the commercial community to make the Reserve Bank's new bill market scheme a success.

I feel that there is scope for liberalising the present refinancing facilities of the Reserve Bank to take care of the increased demand for credit for food procurement and priority sectors, where such demand is high in relation to the optimum growth of deposits which the RBI may expect individual banks to attain.

Prior to nationalisation, the National Credit Council was charged with the task of evolving a credit plan. It is high time a new credit council was set up to perform this function. The council should be composed of individuals selected for their knowledge and expertise and not on the ground that they represent particular sections of credit users, as otherwise the council may become only a forum for ventilating grievances or settling conflicting claims.

The expansion of credit to agriculture and small-scale industries was a trend started after the introduction of social control over banks, but which gained momentum after nationalisation. The public sector banks, particularly their executives deserve praise for the alacrity with which they took the new task upon themselves and reoriented their policies and procedures to cope with it.

The public sector commercial banks have made good progress towards what was one of the main objectives of nationalisation, namely, to give the small borrower an access to bank credit. Branch expansion is only the first step towards extension of banking services to rural and backward areas. The performance of lead banks should be judged not only by the number of branches opened by them but also by the number of projects for improving productivity or creating new employment opportunities which they are able to sponsor or finance in rural and backward areas. Many lead banks have a long way to go in building up the necessary organisation for this type of activity. Care has to be taken to see that excessive pre-occupation with branch expansion does not divert attention from the basic and more difficult task of generating production and employment opportunities in rural and backward areas.

Indeed some measure of official guidance is necessary and unavoidable in any scheme of public management, but it is important to ensure that despite such guidance, the boards of directors remain fully accountable for the final results, in terms of both profit and loss and service to the community. Official guidance should never go so far as to prejudice the accountability of the boards of directors. Equally, the principle of accountability should not be stretched so far as to leave the boards free to adopt policies of their choice subject only to their being judged by the results at the end of the year.

But to allocate responsibility is one thing, to divide accountability is another. Efficient management of public enterprises requires that the boards of directors alone remain accountable for the final results. To ensure that the boards alone remain truly accountable for the final results, official guidance should be provided in such form and manner that the board is able to account for the results, and Parliament and the public are able to assess them, in terms of factors within the board's control and those outside its control.

Just as the official directors should not be regarded as having a representational role in all matters regardless of whether they call for official guidance or not, it needs to be clarified that the duties and responsibilities of other directors drawn from specified sectors like depositors, employees, workers, farmers and artisans are not limited to their respective special interests, but include in their scope the wider interests of the institution and the community.

Excerpts from A. D. Shroff Memorial Lecture delivered on March 30 by Mr Adarkar, a former Governor of the Reserve Bank of India.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS AND PERSONS INTERESTED ARE REQUESTED TO APPLY FOR A COPY OF THE PROSPECTUS FOR FULL DETAILS FROM THE COMPANY'S REGISTERED OFFICE, BANKERS TO THE ISSUE, MANAGING BROKERS, BROKERS AND UNDERWRITERS NAMED BELOW.

Issue of 1,00,000 "E" Class Debentures of Rs. 100/- each at par

BOMBAY SUBURBAN ELECTRIC SUPPLY LIMITED

(INCORPORATED ON 1st OCTOBER, 1929 UNDER THE INDIAN COMPANIES ACT, VII OF 1913)

Registered Office : 5, GRAHAM ROAD, 4TH FLOOR, BALLARD ESTATE, BOMBAY-1

SHARE CAPITAL

AUTHORISED :		Rs.
2,50,000	Shares of Rs. 100 each	2,50,00,000
2,50,000	Equity Shares of Rs. 100 each	2,50,00,000
		Rs. 5,00,00,000

ISSUED, SUBSCRIBED AND PAID-UP :

		Rs.
1,75,000	Equity Shares of Rs. 100 each fully paid	1,75,00,000
83,679	Equity Shares of Rs. 100 each fully paid converted from 7% "B" Class convertible Debenture Loan	83,67,900
50,000	Equity Shares of Rs. 100 each, Rs. 75 called up as on 31-10-1970	37,50,000
	(Balance of Rs. 25 since called up, making the Equity Shares of Rs. 100 each fully paid.)	
	Less : Calls in arrears as on 31-10-1970.	11,500
		Rs. 2,96,06,400
75,000	9 5% Cumulative Redeemable Preference Shares of Rs. 100 each fully paid	75,00,000
		Rs. 3,71,06,400

PRESENT ISSUE :

1,00,000 8% (Subject to tax) "E" Class Debenture of Rs. 100 each at par for cash PAYABLE in full on application.

BOARD OF DIRECTORS

Name and Address	Occupation
Mr. RAMAKRISHNA PARMESHWAR AIYER, No. 581, 18th Road, Khar, BOMBAY-62	Business Executive.

Madras

1. Paterson & Co., 11/12, Second Line Beach, Madras-1.

LOCATION OF THE COMPANY'S UNDERTAKING

The Company is engaged in the distribution of electricity to consumers within its Licensed Area of Supply, which comprises portions of the Island of Salsette in the South Taluka of Bombay Suburban District and North Salsette Taluka of Thana District, the overall area is approximately 362.60 sq. km. The Electricity distributed to consumers is purchased in bulk from The Tata Hydro-Electric System. Bulk supply is received at several points within the licensed area, and is distributed to consumers through a network of distribution mains and sub stations.

OBJECTS AND PROPOSED ACTIVITIES

The Company does not intend to acquire any new business out of the proceeds of the issue but will utilise the same for financing capital expenditure on development of power distribution facilities within the Licensed Area of Supply of the Company.

DATE OF OPENING AND CLOSING OF SUBSCRIPTION LIST

The subscription list of Debentures will open at the commencement of banking hours on the 2nd day of April 1971 and will close at the close of banking hours on the 26th day of April 1971 or earlier at the discretion of the Directors but not before the close of banking hours or the 7th day of April 1971.

PROSPECTUS AND APPLICATION FORMS

Application forms along with copies of the prospectus can be had from the Registered Office at the Company as well as from the Underwriters, Managing Brokers and Brokers, whose names are mentioned above and from the offices of the Bankers to the issue at the places mentioned below.

1. United Commercial Bank, Bombay, Ahmedabad, Bangalore, Calcutta, Delhi, Hyderabad, Indore and Madras.
2. Bank of Baroda, Apollo Street, Bombay-1.
3. Bank of India, 70-80, Mahatma Gandhi Road, Bombay-1.
4. The Vijaya Bank Ltd., Parsee Bazar Street, Fort, Bombay-1.
5. The Andhra Bank Ltd., 18-A, Hamam Street, Fort, P. B. No. 1114, Bombay-1.
6. The Bank of Karad Ltd., 82, Nagindas Master Road, Commonwealth Building, Fort, Bombay-1.

EXPORT ANGLE

By Stavedore

Cotton textile exports

WITH the approach of the end of the financial year 1970-71, the conclusion of yet another spectacular bulk deal in cotton yarn with Burma has been noted with satisfaction by textile export interests. If the deal had been concluded earlier, perhaps it could have helped the realisation of the export target for cotton textiles fixed at Rs 120 crores for the financial year. As it is, there is general satisfaction that the Burma deal could well give a bright start for textile exports for the financial year starting from April 1. The deal, valued at Rs 4.30 crores, for the export of superfine cotton yarn, has been put through by the Cotton Textiles Export Promotion Council and the Myanma Export-Import Corporation of Burma, the central buying organisation for all textiles in Burma with which sizeable bulk contracts in cotton yarn had been effected in the past.

At a time when cotton prices as well as the prices of yarn had tended to climb down from their dizzy heights, this latest bulk deal could well bring about a reversal in the trend. It is to be seen how far the recovery phase would affect the genuine interests of the handloom weavers and, in turn, the export of handloom fabrics, especially to the European market, where the demand for such fabrics had latterly picked up. Be that as it may, India's ability to achieve the same target for the new financial year would depend very largely on how an overall improvement in the export of different items of textiles is maintained in the next 12 months. Shipments of cotton piecegoods and hosiery in particular have to be geared up.

Textile exporters have been pressing, for quite some time, the Cotton Textiles Export Promotion Council and the Indian Cotton Mills' Federation for an appropriate mark-up in the incentives, especially in the light of the strident advance in prices of cotton noticed for the greater part of the current cotton year. The response from the authorities has so far been rather lukewarm. The All India Exporters' Chamber had also had occasion, during the course of this financial year, to urge on the authorities the need for expeditious action so that the improved climate for Indian textiles in the overseas markets could be exploited. Can something positive be expected from the authorities before it is too late? (See also *Export Angle, Commerce* of March 27, page 576). □

Inquiries galore

WITH the growing emphasis of the Government on strengthening both

qualitatively and quantitatively the small-scale sector, it is but natural that this sector's export prospects should be receiving special attention. The small sector has played a significant role in the export growth of some of the major exporting nations such as Japan and Hongkong. Moreover, the small operator enjoys several advantages in cost of production of labour-intensive products in the international market. In this context it is gratifying to know that of late more than 500 inquiries were received by the office of the Director, Export Promotion for Small-scale Industries, for such items as bicycles, bicycle parts and tools and automobile parts from Japan, the United States and Italy. These inquiries, if they are executed, would be worth Rs 82 crores. An interesting aspect is that almost Rs 58 crores worth of inquiries have come from Japan alone. In view of the recent labour shortage and soaring wage situation in Japan many production lines are reported to be becoming uneconomic. The Japanese who once built major business by exporting components to Europe and North America are now looking for components from the developing countries. Naturally this is a market that offers enormous potential for the small-scale sector in India. □

Electricals for East Africa

THE Indian Consortium for Power Projects, constituted recently under the Ministry of Industrial Development, has bagged two major orders against stiff international competition from Malawi in East Africa. One order is for the supply, erection and commissioning of a 66 kv power transformer and the other is for the supply of complete equipment for a 66 kv substation for Malawi's Electricity Supply Corporation. These contracts are a part of the Tedzani hydro-electric scheme which is being financed by the International Development Association of the World Bank and the African Development Bank. □

Teleprinter sales

THE Hindustan Teleprinters Ltd at Madras seems to be poised for a major breakthrough in the export market. Orders worth Rs 48 lakhs are presently at hand. A major part of these has come from Kuwait and Iran for the supply of Arabic and Persian script teleprinters which the company has developed recently. It has also secured similar orders from Bhutan, Ceylon, Yemen and Nepal. Recently trade inquiries for teleprinters were received from Singapore and the Philippines where samples have been sent for testing. The inquiry

from the Philippines is particularly significant as, if the testing proves satisfactory, an order of a sizeable quantity could be expected from that country. □

Uptrend in fish products

THOUGH the month of January showed some setback in exports of fish and fish products, the performance during the first 10 months of the current financial year has been quite encouraging. Shipments totalled 29,816 tonnes valued at Rs 28.80 crores as against 25,474 tonnes valued at Rs 27.73 crores in the corresponding period of 1969-70. This meant a growth of 17.04 per cent in terms of quantity and 3.86 per cent in terms of value.

During the month of January this year shipments totalled only 1,887 tonnes valued at Rs 2.01 crores as against 3,028 tonnes valued at Rs 3.02 crores of January 1970. There was a steep decline in exports of frozen prawns from 1,919 tonnes in January 1970 to 929 tonnes in January this year. This was mainly because of poor offtake by the United States markets which lifted only 369 tonnes valued at Rs 35 lakhs as against 1,360 tonnes valued at Rs 1.35 crores in January 1970. Besides poor catch has also been a contributory factor. Interestingly, the Japanese offtake of frozen shrimps was more than 500 tonnes valued at Rs 90 lakhs during the month. This quantity was more than what the US bought from us.

Another disturbing feature of the exports was a decline in canned shrimp for the second month in succession. Other items which recorded a fall during the month included frozen lobster tails and dried fish. However, frozen frog legs showed a significant rise from 127 tonnes in January 1970 to 165 tonnes in January 1971. However, the export earnings from this item have declined from Rs 19.80 lakhs to Rs 17.69 lakhs and this is mainly on account of the sharp fall in prices of "jumbo" grade in the US markets. □

Leather exports to Japan

A FOUR-MEMBER study team of leather goods manufacturers sponsored by the Foreign Trade Ministry left recently for Japan. The team will explore the markets in Japan for Indian leather goods and the possibilities of expanding the present lines of business. Japan has been a principal market for sheep casings from India but there are indications that Tokyo has started buying in substantial quantities from other countries such as Australia, New Zealand, Pakistan and China while the Indian share has remained stagnant. □

A survey of commerce education

By Bhagwati Prasad

THESE days commerce as an educational course is being systematically eclipsed by management education. Enrolment for commerce courses is dwindling day by day in most of the universities. Commerce graduates are not given their due place by the employers on the pretext that they lack liberal education and common sense. Under these circumstances, it is most timely for teachers of commerce to sit together and have a sort of introspection.

Commerce education in India can be traced back to 1886 when a commercial school was started in Madras. The Government of Madras also showed interest in this branch of study and took the lead in instituting examinations in commerce at about the same time. Then a school of commerce was started in Calicut by the Government of India. In 1903 Calcutta also witnessed the starting of a commerce class in the Presidency College. Afterwards in Bombay and Delhi a few commercial institutes were started to impart instructions in book-keeping, typing and letter-writing etc. With the establishment of the Sydenham College of Commerce and Economics in Bombay began the commerce education at the university level. Subsequent years saw the opening of commerce colleges at different places and commerce departments in various universities.

Now in almost all the universities of India instructions in commerce are imparted and degrees awarded. At the same time high school and higher secondary boards in the country are concerned with commerce education up to intermediate or higher secondary levels. Besides, for professional training in accounting, auditing and management etc, there are also a few specialised institutes such as the Institute of Chartered Accountants of India and the Institute of Cost and Works Accountants of India.

Though commerce teaching began as early as 1886, no effort was made to assess its usefulness and nobody showed concern about the aims and objects of the study of commerce and therefore commerce teaching could not be properly oriented. The earliest opportunity that the Government of India could take was the appointment of the University Education Commission under the chairmanship of Dr S. Radhakrishnan to make a thorough study of the educational system in India and to suggest ways and means to improve it.

The Commission while reviewing commerce education observed that "those who complete their education in commerce and have the intensive training which the Master's degree offers are led to seek posts either as teachers in educational institutions or in the executives of business houses. The opinion of practical businessmen on the ability of these graduates to fit into business is not favourable".¹ The Commission further observed that the business houses "criticise the training received in universities as almost purely theoretical and they find that they have to train the

commerce graduates in the ways of the business just in the same way as they have to train an Art's or Science graduate; some of them even observed that the latter is often easier to train on account of his superior intellectual equipment".²

These remarks of the business houses deserve our utmost attention. It is to be admitted that a commerce graduate does not possess any knowledge of the liberal subjects like psychology, sociology, etc, which go a long way in not only developing the personality but help the persons in business in personnel management and public relations. Besides, what we teach in the name of commerce is hardly found useful by the industrialists and business concerns. This is the reason why the commerce graduates also are trained by the employers along with non-commerce graduates. In this situation the non-commerce graduates will definitely have an edge over the commerce graduates because of their background of liberal education.

The Commission was forthright in giving its comments on the writing of these and the so-called research at the post-graduate level in lieu of one paper in some of the universities. It observed that the "collection of facts is not always based on firsthand experience; it is borrowed from Government blue books and statistical records".³ It opined that during his stay at the university the "commerce student should be given opportunity for practical work in three or four different kinds of firms". After graduation "some of them be advised to specialise in a particular profession like accountancy and receive the requisite practical training and that the training for the Master's degree in commerce be less bookish and confined to a comparatively small number".⁴

There can be little doubt about the usefulness of the suggestions given by the Commission but it is common knowledge that, as usual, the recommendations were put in cold storage. The Government of India did not take any note of the recommendations as regards commerce education. Similarly most of the universities showed no interest and remained lukewarm to the proposals of the Commission, on some pretext or the other.

After about ten years of the submission of the Radhakrishnan Report, someone in the Ministry of Education took note of the devastating criticism at the hands of industrialists and leading businessmen about the futility of commerce degrees like B.Com and M.Com. By that time a few universities had already started the management courses and there came into existence the craze for management degrees. All this prompted the Minister for Scientific Research and Cultural Affairs to appoint a "high powered" committee under the chairmanship of Dr V. K. R. V. Rao with the following terms of reference:

"1. To enquire into and report on the present position of commerce education in India in all its aspects; and

2. suggest measures for its reorganisation and improvement with reference to:

(i) the aims, organisation and content of commerce education; (ii) its relationship to existing and proposed courses of education in business management; (iii) the inter-relation of commercial schools and colleges with schools and colleges of other types; (iv) other allied problems;

so that a sound and reasonably uniform system of commerce education suited to the needs and resources of our developing economy may be provided for the whole country".⁵

The Rao Committee submitted its report in 1961 and recommended a few structural changes under the three heads, namely, pre-university stage, undergraduate stage and post-graduate stage. We may also proceed to discuss the present position, problems and suggestions for improvement under these captions only.

Pre-university stage

These days commerce subjects are introduced at the high school level in the IXth class. The students study book-keeping, business organisation, banking etc for two years and pass high school examination in commerce or after the study of these subjects for a period of three years pass higher secondary examination. These students are required to read almost the same subjects again when they go in for intermediate or pre-university examination. There is repetition to the extent of at least 60 per cent of the syllabi they have covered earlier. It may be stated here that for admission to Intermediate Commerce or pre-university class in commerce, knowledge of commerce at the earlier stage is never insisted upon. The net result is that whatever time has been devoted to the study of commerce at the high school or higher secondary level proves to be a sheer waste.

To overcome the present difficulty, it may be suggested that if the commerce education at the pre-university stage "is intended to secure immediate employment; the courses offered have therefore to be strictly vocational in character and train the pupils concerned in the skills that will enable them to fill up the clerical and other junior posts without which commerce and industry cannot be operated. Examples of such occupations are book-keepers and cashiers, stenographers and typists, clerks, store-keepers and office machine operators".⁶ For those who propose to go in for immediate employment the observation of the Rao Committee must be accepted and syllabus redrafted in the light of the suggestions. But for those who plan to go in for higher education in commerce a study of the elements of psychology, sociology, general science and mathematics be made compulsory. This will help them to develop analytical skill and widen the horizons of thinking. The marks obtained in these subjects need not be taken into account for declaration of the results but at the same time some minimum efficiency must be ensured. In case it is felt that the teaching of these subjects together will increase the burden on the boys, two of them may be studied at the under-

graduate stage. Further details can be worked out by a special committee consisting of the representatives of the higher secondary boards and universities. It would be advisable to have representatives on such a committee from trade and industry.

Under-graduate stage

At present there are four types of courses leading to the degree of the Bachelor of Commerce. In the States where Intermediate still continues, a two-year B.Com course is available in the universities, but where higher secondary is in vogue, three years of teaching is necessary before awarding the degree. The third type is where B.Com (Honours) is awarded with almost the same papers but with a little variation in the syllabi. The fourth type is where the SSLC examination is conducted and the universities are running pre-university classes before the students are admitted to B.Com part I of the three-year degree course.

As regards papers, a wide variety is taught with many combinations. With a little weight to languages, in most of the universities heavy weightage is given to the papers pertaining to economics. The papers taught include *inter alia* economics, currency and banking, public finance, Indian economics, economic development of Great Powers, trade and transport, business organisation, industrial organisation, salesmanship and marketing, secretarial practice, accountancy, auditing, cost accounts, income-tax, mathematics, statistics, insurance, advanced banking, mercantile law, economic problems of India, commercial geography and so on.

This easily shows that there is little co-ordination among the universities. Generally no guidance is available to the students for the selection of papers. They select papers without giving any thought to their future plans. There are a few universities that have started specialisation at this stage. It appears that these universities are not aware of the aims and objects of the B.Com degree. This explains the reason for the introduction of specialisation at the first degree level. No note is taken whether the student is going to pursue higher studies or not. If he proposes to go in for M.Com, specialisation at that stage has no relationship with the papers taught under specialisation here. The result is that a student specialising in co-operation at B.Com offers himself for specialisation in costing or taxation at M.Com level. The need of the day is that this haphazard nature of imparting education must go. B.Com must be co-ordinated with M.Com.

Instead of asking the student to specialise in some field we would do a nice job if we can impart some basic knowledge of the subjects which are in daily use in business. Industrial psychology, principles of management, labour administration and personnel relations are some of these important fields the basic knowledge of which will go a long way in improving the stature of a commerce graduate. The Rao Committee rightly emphasised that "what we need therefore is a B.Com degree that without losing its basic utilitarian character of commerce education will increase the commerce graduate's ability to express himself lucidly and with logic and at the same time, stimulate in him initiative, con-

fidence and analytical ability as also build up his character and make him aware of his social responsibilities. It is also important that a practical outlook should be encouraged in his approach to the problems he studies for his B.Com degrees.⁸ The recommendation has in view the opinion generally expressed by the industrialists and businessmen all over the country that "in terms of initiative, logical thinking and lucid exposition, he (a bachelor of commerce) is worse than the arts or science graduate, while in regard to vocational training he does not seem to show any special competence".⁹

I am not at all for the uniformity of syllabi in all the universities of the country but some sort of common minimum programme must be evolved. At the State level deans of the commerce faculties can meet and work out the details of such a programme. Specialisation at the B.Com stage will not help much. Efforts should be made to increase the weightage in favour of personnel relations, human and industrial psychology, mathematics, principles of management and business economics. This will provide the necessary tools for higher studies and also help the commerce graduate to discharge his duties effectively in case he prefers to go in for employment in business and industry after his first degree in commerce. The importance of language must also be not lost sight of. Besides his grip over the mother-tongue, the knowledge of English is essential. If not inconvenient a fair knowledge of Hindi is likely to help him in business world. But it must be understood properly that it is the language and not the literature that is to be mastered. Study tours to industrial establishments by the students must be encouraged. They should also be taken round a stock exchange, a produce exchange, a few workshops and a few manufacturing companies. Then only they will be found well equipped for immediate employment as well as for higher studies.

Post-graduate stage

A post-graduate student is in no better predicament either. On the other hand it appears to be the culmination point of confusion and lack of farsightedness on the part of those who claim themselves to be the pillars of university education in commerce. The subjects taught here have no relevance with the subjects already taught at the B.Com level. Similarly subjects taught at the M.Com final level have no connection whatsoever with the training imparted at the M.Com previous level. "In fact most of the M.Com courses are either a duplication of the B.Com courses with little addition here and there or they are left-over of subjects from the department of economics".¹⁰ The papers taught include econometrics, economics of Great Powers, population problems on the one hand, and business taxation, company law, advanced accountancy etc, on the other. Not only do the courses suffer from the heterogeneous nature of these papers in different universities but the student is left free to choose any paper of his liking irrespective of its utility to him in his future career. On the one hand he may opt for econometrics and on the other advanced accounts or company law.

I am in perfect agreement with the observation of the Rao Committee that "at

tion lends itself to a common purpose. It has to provide a culminating platform for specialisation as in different fields of commerce for the holding of responsible position specialists in business houses or as general managers or as teachers in educational institutions. These multifarious needs presuppose the formulation of commerce education at this level in such a way as to satisfy each of these needs".¹¹ It appears that this observation of the committee has in no way worked as a stimulant for a long overdue overhauling of commerce courses in our universities. There have been revisions of courses at periodical intervals in almost all the universities but in snapshot manner. The point to be emphasised is that a concerted effort has never been made by the universities to revise the system in a planned way. In most of the cases the revision has been *ad hoc*. The *ad hoc* nature can be explained by an instance where "one university introduced the subject of management accountancy as a compulsory subject at the M.Com previous level and the subject of costing as an optional subject at the M.Com final level quite forgetting that the study of costing preceded the study of management accountancy".¹²

The term "commerce" which has been in vogue during the last 80 or 90 years now is generally felt to be stale. It does not convey precisely as to what is to be taught under this branch of study. It needs to be substituted by a more apt term "business". Our purpose of study can then be stated to be the training of students for various positions in business. It will be in tune with the modern trend. Secondly, under the auspices of the All India Commerce Association deans of the faculties of commerce from different universities should meet and pool their efforts for revision of the courses of business education. They should also strive to bring some built-in uniformity in the courses. Then specialisation in different branches may be left to the universities themselves. It is not desired to make available all branches for specialisation in a single university. They may select the subjects of their own choice subject, of course, to the availability of resources. Specialisation at the B.Com level is to be done away with immediately. We should leave it to the industry to train their junior employees in fields of their choice. Thirdly, leading businessmen and industrialists of the region must be co-opted on the boards of studies and a liaison should always be maintained. Periodically there should be arranged discussions with businessmen in order to have an appraisal of the efforts of the faculty in catering to their needs. After all they are supposed to be the buyers of our product and we must know what type of product suits them. A few universities have made a beginning in this regard. Fourthly, there is a long-felt need to make the business education practice biased. The revision of courses must be aimed at bringing the work experience. This may be achieved by the placement of university teachers and students in business for short duration. "The industrial and business houses can offer really useful opportunities to management teachers for a closer insight into their working by referring business problems to them for comments and by inviting them on boards of interviews and other advisory boards".¹³

men and top executives should be approached for part-time teaching assignment in the faculty in various areas concerned. Some universities have already had the experience of sending their post-graduates to the business houses and industrial concerns for training purposes and they are not happy with it. They feel that "the students were generally asked to take routine work of clerical nature. In many cases they were considered as additional hands that have become available for clearing the arrear work of the institution concerned".¹⁴ It may be submitted here that if the owners or top executives of these houses are associated with the faculty so as to instil in them a feeling of participation, they will be found more responsive.

Similarly university teachers may be sent to these undertakings for firsthand knowledge of the business and industry. These undertakings can also be persuaded to refer their business problems to the faculty for expert advice. Fifthly, at the post-graduate level seminars and group discussions must form part of the syllabus and industrial tours must be made compulsory for the students.¹⁵ Sixthly, let us sit together and form a regular forum under the auspices of the All India Commerce Association and meet every year to review the progress made in different universities in this respect. Problems in implementation of the various suggestions may be discussed at the meeting and solutions can be found out. □

¹⁵In the Karnatak University, Dharwar, students offering costing group for specialisation have necessarily to visit a few factories in order to acquaint themselves with the practice. The author has had occasions to organise a few tours and has found the response from the industry very encouraging. In most of the concerns the chief accountants or cost accountants made themselves available for open discussion on the problems of costing etc. Similarly the students offering taxation group for specialisation have to pay visits to a few appellate courts like the A.A.C., Appellate Tribunal, High Court and here also the response has been found to be

Company Meeting

MADRAS RUBBER FACTORY LIMITED

Chairman's Speech for the 10th Annual General Meeting.

I have great pleasure to welcome you to the Tenth Annual General Meeting of your Company.

We are meeting just after the most eventful election that our country has had since independence. Let me offer on behalf of the company and on my own behalf our humble felicitations and hearty congratulations to Mrs. Gandhi in whom the whole country has confided its destiny. Likewise I would like to offer our felicitations and congratulations to Sri Karunanidhi and his team in whom Tamilnadu has reasserted its confidence. The key note of these elections according to me is stability. What the country today needs is stability at Government levels, Centre and State. I am confident, as no doubt all of you are, that with this set up the progress of India as a whole and Tamilnadu in particular is in for a state of accelerated development.

Working results

The directors' report and audited accounts for the year ended 30th September, 1970 has been in your hands for some time now and with your permission I shall take them as read. Production, Sales and Profits of the Company regis-

tered substantial increases during the year consistent with our usual performance. Sales increased by 20%, viz: from Rs. 20.33 crores to more than Rs. 24 crores. Net profit recorded an increase from Rs. 94.25 lakhs to Rs. 100.82 lakhs. The increase in the net cash generation has been from Rs 147.89 to Rs. 173.24 lakhs.

The Directors are pleased to recommend the payment of a dividend of 12% on the paid-up capital of the company as on 30.9.1970.

Expansion

The balancing equipment received and installed during the year has resulted in additional capacity which has contributed to the higher production during the year. Part of the machinery in respect of our substantial expansion has already been shipped. Efforts are being made to expedite the shipment of the remaining machinery so that the expansion of our capacity from 3,60,000 to 6,10,000 tyres and tubes can be completed in 1972.

Bicycle tyres

The production of Bicycle tyres has commenced from 1st March, 1971. The production will be gradually increased.

Industrial Products

Production of Brake Chamber Diaphragms has also been taken up from February 1971 and they are now undergoing field tests.

Supply meets demand

The tyre shortage felt by the market in November/December last year was the cumulative effect on go-slow and strike conditions in some of the tyre factories. The position has since changed to one of supply meeting demand, with the factories now fully in operation. With the concerted efforts of all tyre companies, effective steps have been taken to ensure fair distribution of tyres so that our products reach consumers at company's approved prices.

Exports

During the year under review, our exports have exceeded Rs. 58 lakhs. Our exports of tyres go to more than thirty countries and prominent among them is the U.S.A. where we are now exporting a wide range of tyres. It has only been through sustained efforts on our part since the inception of our factory that we have been able to obtain this level of export performance. We have taken export as a deep commitment to our country and we shall spare no effort in furtherance of this commitment.

I had emphasised in my last year's speech that it is of great importance to foresee problems in the field of exports. In this connection, I have to report a problem arising from the ban imposed by the Government on export of nylon tyres to U.A.R.

International tyre companies with whom we have to compete in the U.A.R. market have completely changed over from rayon to nylon and in many cases to polyester, fibreglass and steel cords in preference to nylon. In a situation such as this, supplies of rayon tyres will put us at a severe competitive disadvantage in the U.A.R. I am confident

that this will receive the Government's full consideration.

Research & development

Last year I touched on the necessity to continue technical collaboration agreements in view of the importance of getting technical know-how from the collaborators on a continuous basis. Owing to the vital importance of this subject, specially from the point of view of our export markets, I would like to once again emphasise that there is no effective alternative to the continuous technical know-how now received from the collaborators. In the applied research area of tyre technology, tyre units in India are making considerable progress. At the same time it is clear that it is advantageous for our country to receive on a continuous basis from advanced countries the benefits of original research done by them in tyre technology. The amount of expenditure involved in original research of tyre technology is colossal. That is why in a large country like the U.S.A. there are only about 10 independent tyre companies, as only economically-sized units can afford to incur such a large expenditure on research. As against this we already have 8 units in this country and with the addition of 12 new units we will have 20 tyre factories in India. Even granting that resources, men and expertise can be found in India for taking up such original research it will still be a highly uneconomic proposition, as the total production of tyres in India—representing only 2 per cent of the total U.S.A. production—is not large enough to warrant such expenditure. This is why even developed countries such as Japan, Italy, etc., are still depending on original research done in other countries like the U.S.A.

It is also a fallacy to presume that as a country develops, its technical fee payments should come down. This is amply demonstrated by the example of Japan whose royalty payments are increasing substantially every year. What is, therefore, necessary is a rational approach to the subject, keeping in mind the importance of our export markets where our position will be weakened if we do not keep pace with the latest technological development in tyres.

Prospects

The working of our company for the first five months has been quite satisfactory and if the same trend continues, our results for the current year will be better than that of the previous year.

Collaborators

We are indebted to our technical collaborators The Mansfield Tyre & Rubber Co., Ohio, U.S.A., and their President Mr. James H. Hoffman for the technical help that they have continued to give us and for assisting us, without any reservations, to find export markets even in their own country.

Conclusion

With deep sorrow I have to report that Mr. C. Ramasubban, our Director nominated by I.F.C., passed away early this year. In him we had a counsellor of matured and varied experience.

This year will mark the 25th year of Madras Rubber Factory which started as a partnership concern. Starting as a toy balloon manufacturer, MRF has grown into what is today—a major tyre producer.

Today I remember with gratitude all our retreader friends, tyre dealers, consumers, bankers, financial institutions and suppliers for their close co-operation. I thank the workers, staff, management and my colleagues on the Board for their contribution to the development of your company.

THE STATE TRADING CORPORATION OF INDIA LTD

PROVISIONAL RESULTS — YEAR ENDED 31ST MARCH 1971

Statement by Chairman, Prakash Tandon

HIGHLIGHTS

	(Rs. Crores)		
	Last Year 1969-70 (Actual)	This Year 1970-71 (Provisional)	Next Year 1971-72 (Budget)
SALES			
Exports	55.10	70.00	90.00
Imports*	102.60	140.00	175.00
Domestic	5.40	5.00	5.80
Total	163.10	215.00	270.80

PROFIT

Gross Trading Profit including Commission and Other Receipts	16.75	16.54	13.71
Less Export Losses	1.78	5.50	1.69
Trading Profit	14.97	11.04	12.02
Less Total Costs	4.50	5.10	5.19
Profit Before Tax	10.47	5.94	6.83
Less Tax	7.55	3.50	4.10
Profit After Tax	2.92	2.44	2.73

Total	16.80	17.00	18.30

WORKING CAPITAL

Stocks	17.90	20.00	20.00
Debtors	20.50	19.00	20.00

* Excludes Fertiliser imports of Rs. 47.5 crores transferred to M.M.T.C. with effect from 1-1-1970.

Not so long ago, we used to take the customary 6 months and more to complete our Annual Reports and Accounts; our new system now not only enables us to complete them in 2 months, but to quite accurately estimate our results on 1st April for the year ended 31st March. As part of our concept of Accountability we present them speedily to all concerned to be followed by our Annual Report and Accounts in due course.

Our Performance Budget for 1971-72 was released yesterday; and, relieved of the burdens of last year, our management can now concentrate upon its implementation starting today.

This new system of accounting, we divide into 3 functions:

- Maintenance Accounting
- Management Accounting
- Responsibility Accounting

It achieves:

- An Annual Performance Budget
- A Mid-year Review
- A Weekly Sales, Orders and Stock Statement
- A Monthly Review and Profit and Loss Account
- A Quarterly Review and Audited Profit and Loss and Balance Sheet
- The Annual Report and Accounts

1970-71 was a good year. Exports rose by 27%; imports by 37%.

In 1971-72, exports are expected to rise by 28% and imports by 25%. Exports now account for half of the value of our imports.

We had envisaged even in the previous year, in the Chairman's speech on the Annual Accounts, that due to pressures for reducing our prices and margins, there would be a reduction in profitability.

While gross trading profit including commission and other receipts at Rs. 16.54 crores was maintained at last year's level, our developmental export losses at Rs. 5.5 crores were above last year's Rs. 1.8 crores. Next year, however, we hope to cut them back to Rs. 1.7 crores, and aim at making exports near self-sustaining. However, we are taking a conservative view on next year's gross trading profit at Rs. 13.71 crores, though we hope to exceed it.

The Total Costs to Sales ratio has been progressively coming down. It was 2.8% last year, 2.4% this year and is budgeted at 1.9% next year. In money terms the Total Costs this year were Rs. 5.1 crores against Rs. 4.5 crores last year. The rise of Rs. 60 lakhs was accounted for largely by rise in wages, the new office accommodation for headquarters in Delhi, new foreign offices and higher insurance and interest charge. Next year the Total Costs including all overheads, warehousing, interest charge etc. will go up very little, to Rs. 5.2 crores; and we will pick up again the virtually stationary trend of costs in recent years; increases being taken care of by savings.

The following statement shows how the Divisions fared in their export effort:

EXPORTS

	(Rs. Crores)			
	1969-70	1970-71		1971-72
	Actual	Latest Estimates	As %age of 1969-70	Budget
Agricultural Products ..	10.98	14.00	127.50	10.50
Chemicals	3.66	6.00	163.93	9.00
Engineering	8.92	9.00	100.90	10.50
General Products	5.85	6.00	102.73	7.00
Leatherware	3.97	6.00	151.14	8.00
Railway Equipment	0.70	—	—	12.00
Textiles	21.07	29.00	137.59	33.00
Total	55.15	70.00	126.93	90.00

Agricultural Products and Textiles did particularly well, while General Products had to stage a recovery from the loss of its important component of human hair trade, hit by the new synthetic hair. Chemicals did very well and hope to be an important exporter. Leatherware showed a healthy rise from 1 million pairs of shoes last year to an estimated 1.5 million; hoping to show yet further expansion both in quantity and world coverage.

Railway Equipment Division did not manage to actually export anything during the year, but enough is in gestation to show results next year. Its search for new orders gathered momentum and a contract for 3,600 wagons, our largest ever, was won in Yugoslavia. Engineering Division's export pace slackened a little, but we hope to pick up in the coming year, particularly if steel availability improves.

IRMAC, the new Industrial Raw Materials Assistance Centre has got off the ground and expects a growing tempo.

Imported Cars Department continues to emphasise service to customers and profitability for the exchequer.

(Continued on page 627)

(Concluded from page 626)

Manpower was well maintained, and the only increases were in management, accounted for partly by some recruitment of specialist personnel from outside and partly by the many promotions from the staff within. We are constantly endeavouring through training at all levels to upgrade our staff and befit them for higher responsibilities and promotions.

Personnel Division is trying to evolve a progressive policy and a continual dialogue with the staff, with whom relations were generally good. The new head office at Chandra Lok was an attempt at providing modern and efficient working and business environment of an international standard but at Indian costs. Training continued its emphasis on management and staff development through in-company and outside courses, especially with the help of universities and management institutions. Coordination maintains a contact with our associates and our foreign operations. Consequently relations with industry and Trade and the service we render continue to improve.

Management Services Division now consists of economics, statistics, OR and market research, and is becoming the eyes and ears of our management, providing it with advice and information to help sharpen up decision-making.

Quality Control made its contribution to develop vendor-rating, an assay of the capability of our associates, and a quality consciousness in the Corporation and among its associates.

Finance Division's contribution was particularly special, and worth mentioning is the setting up of its new Credit, Funds Management and Contracts Services.

Our Cashew subsidiary got well off the ground and during the period from November 1970 to February 1971 imported over 41,000 tonnes of raw nuts. It expects to import another 30,000 tonnes during March, making a total of over 71,000 tonnes compared with 68,000 tonnes in the corresponding period last year.

Our subsidiary, Handicrafts and Handlooms Exports Corporation of India Ltd., also had a good year; exports increased by 50 per cent from Rs. 2.25 crores to Rs. 3.45 crores.

Working capital continued to be tightly controlled, and the ratios of stocks to sales and debtors to sales dropped from 11% to 9.3% and from 12.6% to 8.9% respectively. Next year, there would be a further reduction to 7.4% for each.

We continue to give our increased dividend of 20% (previously 10%) on the equity capital of Rs. 7 crores (previously Rs. 2 crores) enlarged through three successive bonus issues. The total dividend was therefore Rs. 1.4 crores per annum (previously Rs. 20 lakhs); what is more, it is now paid quarterly to our shareholders (previously annually).

While happy with the improvements that we have been able to induce in the Corporation's working, we are only too aware of our shortcomings and the long way we have yet to go to reach the best standards of world trade organisations operating under highly competitive conditions.

How Tatas help you all the time to live better

Sometimes it is interesting to take a look at things — a new sort of look, that makes you see them differently. For instance, look at the things around you that work by electricity.

The ceiling fan that keeps you cool... the street lamp just outside that guides you safely home at night... the mill that makes the cloth you wear... the radio that keeps you in touch with the world.

You can easily think of more things. But you will agree, life would have been dull and difficult without them... without electricity.

For half a century Tatas have been serving you and industry with this low-cost power. And every time you press a switch...

Someone at Tatas is working for you

STATE BANK CHAIRMAN'S SPEECH

IMPORTANCE OF GUIDELINES FOR CREDIT FLOW

R. K. TALWAR ON DILEMMA FACING BANKS

Shri R. K. Talwar, Chairman of the State Bank of India, has highlighted the need for credit planning and clear guidelines to the banking system as regards the appropriate priorities in lending.

In his speech at the Sixteenth Annual General Meeting of the shareholders held in Bombay on Friday, the 26th March 1971, he said:

Let me extend a warm welcome to you all to the sixteenth annual general meeting of the State Bank of India. The annual report, including the balance sheet as on the 31st December 1970 and the profit and loss account for 1970, is already in your hands. As you will have observed, during the year the Bank's profit has somewhat dipped inspite of a substantial increase in the volume of business handled. I cannot pretend I am not concerned over it, though I am certainly not perturbed. The lower profit is due mainly to the increased operational costs during the year. We hope our working will show better results in the current year. I believe that even while reorienting their operations for subserving the social good, or rather for that very purpose, the commercial banks, whether in the private or public sector, must continue to make increasing profits year after year and thus strengthen themselves and the country's economy.

Credit Expansion

I would like to take this opportunity to share with you some thoughts on the large credit expansion witnessed over the last three years in the banking system. An indisputable fact is that this large credit expansion has been brought about mainly in pursuit of a deliberate public policy. It was on the assurance of liberal support from the central banking authority that the commercial banks were able to extend credit in these years on a significant scale to agriculture, small-scale industry and small businesses. This was entirely in accord with the aspirations of the weaker sections of the community, which were attached greater importance than ever before. A major portion of the credit expansion should be attributed to the reorientation of bank lending operations in the wake of this welcome change.

Another area in which credit expansion has taken place over the last few years with the full support of the Reserve Bank of India, or because of it, relates to the food procurement operations—and, to an extent, also the fertiliser distribution operations—of the State governments and their agencies and the Food Corporation of India. Whether the financing of these operations should have been its legitimate concern or not, the banking system was in a position to undertake this activity

mainly due to the refinancing support available from the Reserve Bank of India. There was also an unprecedented demand for credit from the sugar industry. Production in this industry reached record levels for two successive years, and the prospect seems the same for the third year also. Due to several factors, over which the industry has no control, the offtake of sugar is very slow and the banks are obliged to provide finance to enable the industry to carry the large stocks.

Banks' Predicament

It is in this context that we should view the recent monetary restraints, and particularly the stringent net liquidity requirements designed to discourage commercial banks' borrowings from the Reserve Bank. It should go without saying that I am entirely at one with the objective of monetary policy, namely to contain inflationary pressures, on the need for which there can be no two opinions. I do not propose to make an extensive excursion into the realm of economics, nor to participate in the controversy over the efficacy of the monetary weapon. Wherever the real roots of inflation may lie, once the inflationary trends set in, no central banking authority can remain a silent spectator without taking such steps as lie within its powers. Yet, I feel, I must draw attention to the predicament in which commercial banks find themselves today. This arises mainly from the modification of refinance facilities, substantially on the basis of which the credit expansion had taken place.

The principle that banks should lend and invest no more than what they possess by way of deposits, and use the Reserve Bank of India only as a lender of the last resort, is indeed unexceptionable. However, a relevant point here is that liberal refinance was made available to the banks with the express purpose of ensuring that the new shift in the lending policy should not come in the way of the medium and large-scale industries obtaining finance for their legitimate production needs. This support from the Reserve Bank enabled the banks to go all out in extending credit in pursuance of public policy and simultaneously continue to meet other legitimate credit demands. With the curtailment of refinance facilities in the context of inflationary trends, the banks will find

it difficult to meet the aggregate demands for credit from their own resources immediately. The squeeze must be felt somewhere and this is where the banks find themselves in a fix.

Credit Planning Needed

Their dilemma is that large and medium-scale industries cannot be denied assistance without detriment to industrial production, and the weaker sections of the community cannot be denied assistance without a serious set-back in public policy. Surely the decision cannot be left to the discretion of each individual bank and the situation calls for credit planning and clear guidelines to the banking system as regards the appropriate priorities in lending. I do not suggest there has been no credit planning as such so far; but this planning has merely been directional in nature without bringing within its compass the quantitative allocation of the total flow of credit. What I have in mind is an assessment of the optimum expansion in bank credit that is permissible, and its apportionment among various sectors and sub-sectors of the economy so as to accord with the Plan priorities. With the awareness of the limited resources, I hope that such credit planning will receive the urgent attention that it deserves.

Deposit Rates

Varying views have been expressed in regard to the pattern of interest rates on the deposits in the country. One view is that for an accelerated growth in deposits there should be a substantial increase in these rates. I doubt very much whether deposits, at least in this country, can be considered interest elastic, but this is no reason why the bank depositor should be given a raw deal. Recently there was an increase in the Bank Rate from 5 to 6 per cent. The effect of an increase in the Bank Rate is a rise in the interest rate structure both for deposits and advances. In our country, however, the effect has become lop-sided, in that while there has been an all-round increase in the lending rates, the deposit rates have not correspondingly moved up. Whatever may be the objective of increasing the lending rates, the proportionate benefit ought to be passed on to the bank depositor, who should get what is legitimately his due.

Financial Institutions

In this context, I would also like to draw attention to the invidious distinction in the matter of interest rates as between individual depositors and some large financial institutions; it is indeed ironical that the individual depositors should be clearly at a disadvantage vis-a-vis such institutions. In the case of a bank depositor, the shorter the period of the deposit, the lower his return by way of interest. A financial institution like the Life Insurance Corporation of India or the Unit Trust of India, on the other hand, may operate in

the inter-bank call money market and command a high return—as disproportionately high as 11 to 12 per cent—on its day-to-day lendings. When these financial institutions were permitted to operate in the inter-bank call money market, even though they are not banks, their entry was justified on the ground that this would improve the liquidity of the banking system. I am not sure that this hope has been fulfilled, since the funds offered in the call money market are mostly the funds which would in any case lie with the banking system and earn interest at the rates applicable to the public. The only result seems to have been a diversion of funds from low-yielding fixed and short-term deposits to high-yielding call deposits, with a consequent rise in the cost to the banking system. The position is more or less the same in the case of the co-operative banks. Some of these banks, taking advantage of their exemption from the deposit rate directives of the Reserve Bank of India, have succeeded in extracting a stiff price from the banking system for their deposits. I urge that not only on considerations of fairness but also of wider issues of investment, individuals and institutions should be put on an equal footing in the matter of return on surplus funds.

Consolidating Gains

As stated earlier, commercial banks have lent to priority sectors and particularly to agriculture at a fairly fast rate. The pace of their branch expansion programme has also been very fast. Severe strains have, therefore, developed on the organisational and trained man-power resources of the banking system as a whole. The understanding as regards the concept of lending to the priority sectors has not been uniformly clear at all levels and the stipulated criteria in regard to assessment of applications have not been strictly adhered to. Measures will have to be taken to consolidate the gains in respect of advances to the priority sectors as well as opening of new branches. The pace of progress in these two spheres must be related to the growth in qualitative and quantitative terms of the organisational infra-structure and vice versa. For this purpose, it will be necessary for the commercial banks to realign their organisational patterns so that they may regain their poise and proceed with renewed confidence and vigour.

Agricultural Finance

Of the priority sectors, agriculture poses very hard problems. The credit needs of this sector in the next three or four years seem to be as high as Rs 4,000 crores. Meeting these needs is an enormous task. Having regard to the resources available, the role of the commercial banks in this field can only be supplementary, at any rate in the immediate future; the responsibility must continue to rest mainly with the co-operatives. It will be imperative for commercial banks to ensure that the credit that has already been extended, or is being extended, is put to the most effective use. This presupposes the creation and strengthening of a machinery which can properly evaluate the proposals at the initial stage and effectively supervise afterwards the utilisation of credit at

different stages.

It will be difficult to create such a machinery at every office of the Bank. The Bank's strategy will, therefore, be to move away from scattered lending and shift the emphasis towards intensification of the area approach. Efforts will be directed towards formulation of a programme of banking propositions in respect of a definable area consisting progressively of a village, a cluster of villages, a taluka or a few talukas, leading to integrated and harmonious development covering the various facets of the agricultural economy of that area. We believe that only through a concentrated effort in selected areas could the scarce resources of the banking system be put to the optimum use. To this end we propose to select throughout the country about 150 centres, in course of time, where we shall strengthen our offices so as to be able to take both the initial and follow-up action in dealing with the loan applications. In selecting these centres, we will be guided by consultations with the State authorities, and have a bias in favour of areas with a preponderance of small farmers, particularly where Small Farmers' Development Agencies are being set up and in districts where we have assumed the lead role. Elsewhere our efforts will, subject, of course, to adequacy of resources, be confined to the financing of only those farmers who come to the Bank on their own and have their land situated not more than ten miles from the nearest office. Here again the Bank's efforts will be to avoid scattered lendings, financing being restricted to a village or a cluster of villages.

Organisational Structure

Last year I referred to the inadequacy of the Bank's organisational structure to meet the problems of control posed by the growing number of the Bank's offices and our desire to have the entire matter studied by a team of management consultants. The services of the Indian Institute of Management, Ahmedabad, were engaged for this purpose and the study has now been completed.

The consultants have suggested a plan of reorganisation to meet the problems caused by the rapid growth and the change in the nature of business of the Bank during the last few years. Broadly, it has been suggested that the work at the larger branches should be organised on the basis of customer-groups to assist in focussing attention on the needs of different types of customers. Handling of the complete range of banking needs of a customer in one department would improve the quality of service which customers expect from the Bank. It has also been suggested that decision-making should be further decentralised not only to expedite the customer's work but also to create a climate for managerial development in the supervisory cadres.

The consultants have recommended that a system of annual performance-budgeting in regard to deposits, costs and profits should be introduced at each office to enable systematic development of business in each market segment in consonance with the Bank's policies. It has been suggested that management control based on such a scheme of annual planning

would provide scope for timely remedial action, at the same time enabling the operating staff to know what is expected of them. Detailed suggestions have also been made to bring about certain far-reaching changes at the Local Head Offices and Central Office with specific responsibilities in relation to the management needs of the various aspects of the Bank's business. These recommendations are now being examined.

Staff Relations

It is customary at such annual meetings for chairmen to thank members of the staff for their co-operation during the year. We are fortunate in having been endowed with dedicated employees at all levels, who keep their institution going and prospering. They are our mainstay. I must offer my sincere thanks for their co-operation. We successfully concluded negotiations for major wage settlements both with officers and the junior staff during the year. These settlements have been reached on the basis of major benefits to the staff. It will now be the responsibility of the management and the unions alike to ensure that the return to the organisation in terms of higher efficiency and of assumption of greater responsibilities by the staff would be commensurate with these benefits resulting in greater customer satisfaction.

If I may turn to the banking industry as a whole, the picture of staff relations is none too encouraging. The industry is up against the bewildering variety and multiplicity of disputes. The conduct of negotiations is bedevilled by intra-union and inter-union pressures. The ultimate sufferer is the customer, who is the reason for the very existence of the banks. Indeed, the irony is that the greater the suffering of the customer, the greater the pressure on the managements to settle. They become helpless participants in deals where not reason but power to dictate terms becomes the sole arbiter; and the settlements while apparently solving one dispute seem to be sowing the seeds of another dispute in another wing of the same institution or in another institution. We never seem to reach the end of the road. I can only voice the hope that it will be possible before long to evolve a more suitable machinery for the settlement of disputes so that the atmosphere may become less and less vitiated in course of time and greater harmony may prevail between managements and unions. Only then will the customer receive more courteous, speedier and cheaper service, to which he is entitled.

I wish to place on record our sense of high appreciation of the valuable services rendered by Shri K. T. Desai who relinquished his office as Vice-Chairman after the completion of his term of appointment on the 7th June 1970. I also thank the Members of the Local Boards and the Directors on the Central Board who ceased to be on these Boards during 1970 for their able guidance and direction.

BALANCE SHEETS

RISE IN PRODUCTION

Mahindra and Mahindra earns more

WITH higher sales for the year ended October 31, 1970 at Rs 31.1 crores against Rs 28.5 crores in the previous year, the gross profit of Mahindra and Mahindra Ltd (Chairman: Mr Keshub Mahindra, Bombay) increased to Rs 123 lakhs from Rs 108 lakhs. The net profit, after depreciation and taxation, amounted to Rs 56 lakhs (Rs 41 lakhs). The ordinary dividend has been maintained at 11 per cent.

The company's gross profit margin works out to 4 per cent against 3.8 per cent. The ratio of net profit to net worth comes to 9.7 per cent (7.3 per cent).

In the automotive division, sales of jeep vehicles in the year under review were 10,008 units (9,303 units). A total of 10,168 vehicles (9,205 vehicles) were produced. The company concluded four contracts during the year for the export of a total of 3,304 jeeps together with a corresponding supply of spare parts. These were mainly for Yugoslavia and Indonesia; so far 1,050 vehicles and spares have already been shipped. In addition, 947 vehicles and spare parts were exported to Ceylon, Nigeria, Singapore, Philippines, Indonesia and Yugoslavia against orders booked in the previous year.

In the steel division, nearly 60,000 tons of rails valued at Rs 4.16 crores were exported during the year. In addition, over

import shipments to the tune of 1.13 lakh tons. Nearly 29,000 tons remain to be shipped in the current year against orders booked in the previous year. Sales of alloy and special steel totalled 24,177 tons.

The working of the instrumentation division showed a satisfactory improvement over its previous year's performance, with the intake of orders at Rs 110 lakhs (Rs 97 lakhs) and invoicing at Rs 86 lakhs (Rs 69 lakhs). A miniature pneumatic transmitter is now under production and the first few units are being sent to potential users for evaluation. The pyrometric equipment produced by the division is now accepted as standard equipment and efforts are being made to increase its production.

The electronics division has acquired a six-acre plot of land at Nasik in Maharashtra for setting up its manufacturing operations in respect of professional grade electronic components. The Bombay unit of this division is proceeding with the manufacture and assembly of military equipment, for which orders are in hand.

The two helicopters and two fixed-wing aircraft acquired by the agro-aviation division commenced aerial spraying operations towards the middle of the year under review and covered over a lakh of acres in various States. Further, one lakh of acres have been sprayed since November 1970.

During the year under review, manufacturing activities of the company were at a much higher level than in the previous year. The demand for all products produced and serviced by the company continued to rise at a healthy rate calling for expansion and rationalisation of manufacturing facilities. To undertake this expansion different avenues to augment financial resources are being explored and the proposed merger with the Union Bank of India Ltd is the first step in this direction.

Mahindra Owen Ltd, a subsidiary, undertook development of several new products such as the 45 kilo litre oil tanker, heavy trailers of the range of 70 to 100 tons and the recovery gear during the previous year which is expected to yield dividends from the current year onwards. Mahindra Sintered Products Ltd is comfortably placed in respect of orders in hand and expects further improvement in the current year. Owing to the sudden slump in the diesel engine market, Indian National Diesel Engine Co Ltd was left holding large stocks of finished engines and the manufacturing programme of both air and water cooled engines had to be stopped during the year, resulting in increased losses. With the market now showing signs of revival, the company has resumed production and improvement in turnover is expected in the current year. The "M-seal" cable jointing kits, "M-seal" epoxy

base compounds and dobesive epoxy adhesive of Mahindra Electro-Chemical Products Ltd are now established in the Indian market. □

State Bank of Hyderabad

INTEREST and discount earned by State Bank of Hyderabad (General Manager: Mr S. K. Datta, Hyderabad) for the year ended December 31, 1970 have increased to Rs 4.7 crores from Rs 4.1 crores in the previous year. The net profit amounted to Rs 10.52 lakhs (Rs 24.30 lakhs). The dividend was maintained at 6 per cent. Deposits of the bank increased to Rs 64.8 crores from Rs 58.5 crores. Advances declined to Rs 50 crores from Rs 52.4 crores. Investments were higher at Rs 17.9 crores (Rs 15.4 crores). The ratio of advances to deposits declined to 77.1 per cent from 89.5 per cent. The ratio of investments to deposits was higher at 27.6 per cent (26.4 per cent) and that of cash to deposits was lower at 8 per cent (8.9 per cent).

During the year under review, direct finance to agriculture went up to Rs 4.79 crores (46.48 per cent) by way of limits

and to Rs 4.19 crores (50.18 per cent) in terms of outstandings. The number of accounts increased by 3,613 to 12,351. The bank has introduced "small dairy loans scheme" at five centres to finance the farmers for the purchase of milch cattle. At the end of 1970, over 30 per cent of the farmers assisted by the bank under direct finance schemes have land holdings of less than five acres and the proportion of farmer borrowers having advances less than Rs 5,000 was about 80 per cent. In indirect finance to agriculture the amount outstanding as at the end of the year was Rs 73 lakhs.

In the year under review, the enhancement in the provision of credit to small-scale industries amounted to Rs 1.28

8,700 tons of steel valued at Rs 83 lakhs were exported against orders placed directly on the company. The steel division also obtained a considerable share of the steel import business. Despite the scarcity of steel all over the world during the first half of the year, the company could arrange

crores in terms of limits sanctioned and Rs 99 lakhs in terms of outstanding advances. The increase in the number of units assisted was 1,321. The total number of persons covered under small business finance (doctors, surgeons, dentists, operators of trucks, taxis, etc) was 2,423 (1,178) with Rs 78 lakhs granted at the end of the year as against Rs 57 lakhs in the previous year.

The total advances for exports granted by the bank increased slightly from Rs 2.66 crores at the end of 1969 to Rs 2.69 crores at the end of 1970. These covered both pre-shipment credit and post-shipment credit. During the year under review, 47 branches were opened raising the total to 230 including one sub-office at the close of the year.

State Bank of Travancore

INTEREST and discount earned by State Bank of Travancore (General Manager: Mr S. D. Varma, Trivandrum) for the year ended December 31, 1970 have increased to Rs 3.9 crores from Rs 3.2 crores in the previous year. The net profit was Rs 8.10 lakhs (Rs 5.67 lakhs). The dividend has been maintained at 6 per cent. The allocation to the reserve fund was Rs 1.62 lakhs (Rs 1.14 lakhs). Deposits of the bank increased to Rs 56.8 crores from Rs 50.6 crores. Advances rose to Rs 45.6 crores from Rs 44.7 crores. Investments were higher at Rs 14.8 crores (Rs 12.3 crores). The ratio of investments to deposits increased to 26.1 per cent from 24.3 per cent. The ratio of advances to deposits declined to 80.2 per cent from 88.3 per cent.

The bank's financial assistance to priority sectors such as agriculture, small-scale industries, small business and exports re-

corded a rise of 29 per cent in the year under review. The bank's advances to small business recorded an increase of Rs 83 lakhs (82 per cent) in terms of limits and the outstandings rose from Rs 30 lakhs to Rs 115 lakhs (283 per cent). The bank's direct finance to agriculture and allied activities increased in terms of limits by Rs 44 lakhs to Rs 299 lakhs, number of farmers by 1,205 to 5,180 and utilisation by Rs 95 lakhs to Rs 223 lakhs during the year ended

December 31, 1970. The aggregate limits sanctioned to small-scale industries increased by Rs 354 lakhs to Rs 1,032 lakhs (52 per cent), the number of units assisted by 771 to 1,632 and the outstandings by Rs 158 lakhs to Rs 476 lakhs (50 per cent).

The outstandings under credit for exports granted by the bank increased from Rs 67 lakhs at the end of 1969 to Rs 98 lakhs at the end of 1970. These covered both pre-shipment credit and post-shipment credit. During the year 29 branches were opened by the bank raising the total number of offices to 182.

State Bank of Bikaner and Jaipur

INTEREST and discount earned by State Bank of Bikaner and Jaipur (General Manager: Mr C. P. Saigal, Jaipur) for the year ended December 31, 1970 have slightly increased to Rs 5 crores from Rs 4.4 crores in the previous year. The net profit was Rs 7.48 lakhs (Rs 17.92 lakhs). The dividend was maintained at 7 per cent.

Deposits of the bank expanded to Rs 68.3 crores from Rs 61.8 crores. Advances declined to Rs 52.5 crores from Rs 57.8 crores. Investments were higher at Rs 17.9 crores (Rs 15.5 crores). The ratio of advances to deposits declined to 77 per cent from 93.5 per cent. The ratio of investments to deposits increased to 26.2 per cent from 25 per cent. The ratio of cash to deposits was higher at 11.5 per cent (8.6 per cent).

During the year under review, advances to small-scale industries increased by Rs 2.39 crores (44 per cent), to agriculture by Rs 2.27 crores (107 per cent) and to small business by Rs 0.50 crore (65 per cent). The bank's advances to agriculture, in terms of limits, increased from Rs 3.82 crores at the end of 1969 to Rs 7.21 crores at the end of 1970, a rise of 89 per cent. Outstandings rose from Rs 2.12 crores to Rs 4.39 crores, a rise of 107 per cent during the same period. The number of accounts increased from 5,130 to 13,388, the number of farmers assisted through these accounts having increased from 7,450 to 20,012. Under the "Village Adoption" scheme, the bank has adopted 105 villages so far. The bank has also been making experiments in the financing of farmers in dry farming areas. In 12 dry farming districts in Rajasthan, the bank has financed 3,849 farmers to the extent of Rs 135.92 lakhs in terms of limits, the outstandings being Rs 95.01 lakhs as at the end of 1970.

Limits sanctioned to small-scale industries, increased by Rs 2.45 crores to Rs 14.65 crores, outstandings by Rs 2.38 crores to Rs 7.87 crores and the total number of units assisted by 3,384 to 6,229.

The total advances for exports granted by the bank aggregated Rs 3 crores at the end of 1970. These covered medium-term export credit, pre-shipment credit and post-shipment credit.

During the year under review 16 branches were opened under the expansion programme and 14 branches outside the programme (including a single one-man office) thus bringing the total number of offices of the bank as at the close of the year to 271.

Sales of sugar, spirit and acid of the Mysore Sugar Co Ltd, Bangalore, for the

In the market

Bombay Suburban Electric Supply

BOMBAY Suburban Electric Supply Ltd (Registered Office: 5 Graham Road, Ballard Estate, Bombay) is offering for public subscription one lakh 8 per cent E class debentures of Rs 100 each at par to the total value of Rs 1 crore. The entire issue has been underwritten.

The subscription list which opened on April 2 will close on April 26 or earlier at the discretion of the directors but not before April 7. The entire amount of Rs 100 per debenture is payable in full on application.

The company is engaged in the distribution of electricity to consumers within its licensed area of supply, which comprises portions of the island of Salsette in the south taluka of Bombay suburban district and North Salsette taluka of Thana district, the overall area is nearly 363 sq. km. The electricity distributed to consumers is purchased in bulk from the Tata Hydro Electric system.

The proceeds of the present issue will be utilised for financing capital expenditure on development of power distribution facilities within the licensed area of supply of the company.

year ended June 30, 1970 amounted to Rs 5.88 crores against Rs 5.67 crores in the previous year. The net profit, after providing Rs 34.36 lakhs (Rs 38.03 lakhs) for depreciation, amounted to Rs 30.13 lakhs (Rs 65.19 lakhs). Despite the very difficult conditions under which the sugar industry had to function when most of the factories have been obliged to work under loss, Mysore Sugar was able to report a sizable profit, large enough to enable it to maintain the dividend at 20 per cent. An amount of Rs 1.58 lakhs (Rs 38.77 lakhs) has been set aside for the development rebate reserve. The general reserve got Rs 19 lakhs (Rs 15.83 lakhs).

Champan Sugar

Sales of sugar and molasses of Champan Sugar Co Ltd, Kanpur, for the year ended June 30, 1970 have increased to Rs 3.39 crores from Rs 2.68 crores in the previous year. After providing Rs 9.14 lakhs (Rs 6.58 lakhs) for depreciation and nil (Rs 4.75 lakhs) for taxation, the company has suffered a loss of Rs 14.62 lakhs (profit of Rs 2.58 lakhs). During the year under review total cane crushed was 27.11 lakh quintals (21.89 lakh quintals). Total sugar manufactured was 2.43 lakh quintals (2.10 lakh quintals). In the wake of a bumper crop of sugarcane and all-time highest production of more than 42 lakh tonnes of sugar in the country, there was considerable rise in the production of this company also. The recoveries have been lower due to pests and diseases.

G. Claridge

Sales of G. Claridge and Co Ltd, Bombay, for the year ended December 31, 1970 have increased to Rs 81.13 lakhs from Rs 71.84 lakhs in the previous year. The net profit, after providing Rs 4.16 lakhs (Rs 4.75 lakhs) for depreciation, amounted to Rs 18,699 (loss of Rs 2.84 lakhs). The

dividend for the year was 5 per cent (nil). In spite of keen competition prevailing in the printing industry and some unforeseen circumstances, the results of the printing division of the company was quite satisfactory. The company's paper pulp packaging plant at Poona, exported a sizable quantity of its egg trays and filler flats, although at very low prices. In the latter half of the year, the company was able to increase its production and sales. With renewed efforts, it could import a fluorescent tube light die, which has since been installed. The total cost incurred on this die was Rs 1.28 lakhs.

Vulcan-Laval

The total sales turnover of Vulcan-Laval Ltd, Bombay, for the year ended December 31, 1970, have increased to Rs 3.25 crores from Rs 2.76 crores in the previous year. Gross profit improved to Rs 34.46 lakhs from Rs 23.62 lakhs. Depreciation claimed Rs 12.64 lakhs (Rs 8.34 lakhs). After necessary adjustments, the net profit amounted to Rs 17.51

lakhs (Rs 11.30 lakhs). The company is paying a maiden dividend of 6 per cent for the year. Spray dryers of anhydro design invoiced in 1970 has contributed to the improved results for the year under review. The company intends to diversify its activities further by undertaking manufacture of cigarillo machines in technical collaboration with Arencos AB., a Swedish firm, subject to the approval of the Government. Production of packaging machinery for food and other consumer industries in technical collaboration with the same Swedish firm is also being contemplated. As on February 28, 1971 the company has on hand orders worth Rs 2.17 crores and expects an increase of 10 per cent in the turnover during the current year.

Uttar Pradesh Hotels

The total turnover of Uttar Pradesh Hotels and Restaurants Ltd, Varanasi, for the year ended September 30, 1970 was Rs 50.20 lakhs against Rs 38.08 lakhs in the previous year. The net profit, after provid-

ing Rs 4.05 lakhs (Rs 3.83 lakhs) for depreciation and Rs 4.15 lakhs (Nil) for taxation, amounted to Rs 9.51 lakhs (Rs 7.93 lakhs). The ordinary dividend was stepped up to 10 per cent from 7 per cent. The development rebate reserve claimed Rs 69,000 (Rs 2.56 lakhs). The general reserve got Rs 7.70 lakhs (Rs 2.80 lakhs). The progress of Hotel Clarks Avadh at Lucknow is well maintained and it is expected that before the end of the next financial year the hotel will start operating. The construction of the Jaipur Hotel Clarks Amer will start from early May and it will be completed by March 1972. The total outlay on these two projects is estimated at Rs 2 crores, which will be financed by borrowing Rs 1.35 crores from Hotel Loan Development Board and banking sources. The balance amount of Rs 65 lakhs will be met out of the new issue 1970 of share capital of Rs 42.50 lakhs made in December, internal resources of Rs 7.50 lakhs and rental advance of Rs 15 lakhs. The new issue of share capital of Rs 42.50 lakhs was oversubscribed by the public. Loans totalling Rs 1.20 crores from Hotel Loan Development Board have been sanctioned.

New Commercial Mills

Sales of the New Commercial Mills Co Ltd, Ahmedabad, for the year ended March 31, 1970 have more than doubled to Rs 3.41 crores from Rs 1.63 crores in the previous year. The company has earned a profit of Rs 23.84 lakhs against a loss of Rs 86.99 lakhs in the previous year. The dividends for the year have been skipped. The development rebate reserve claimed Rs 4.24 lakhs (nil). No provision has, however, been made for the depreciation in the current year. There are still arrears of depreciation for the years 1967-68, 1968-69 and 1969-70 amounting to Rs 35.37 lakhs. A scheme of compromise and/or arrangement between the company and its creditors and members was sanctioned by the High Court of Gujarat on May 2, 1969. As per the scheme, the capital of the company, both preference and ordinary, was reduced.

Preliminaries

Nocil

The performance of the National Organic Chemical Industries Ltd, Bombay, for the year ended December 31, 1970 was highly encouraging. The company's sales have jumped to Rs 23.52 crores from Rs 15.95 crores in the previous year. After providing Rs 3.33 crores (Rs 3.30 crores) for depreciation and transferring Rs 3.78 lakhs (Rs 82.08 lakhs) to capital expenditure, the company has earned a profit of Rs 1.91 crores against a loss of Rs 1.33 crores in the previous year. After deducting this profit from the previous year's accumulated loss, the net loss carried forward is Rs 2.81 crores. In the year under review, manufacturing costs have been affected unfavourably due to rise in prices of naphtha, drums and a higher duty on fuel. In the first quarter of 1970, production was restricted as a result of the scheduled biennial shutdown of all plants for a period of four weeks and for a further period due to mechanical problems encountered in March 1970. Subsequently, production has improved and all plants have been operating satisfactorily.

EQUITIES

Wait-and-see tendency

BOMBAY, March 31

FIRST reactions to the interim Budget were generally favourable, for the market thought that an anticipated deficit of Rs 240 crores was not large enough to warrant heavy taxation but the support tapered off as the Finance Minister began to suggest that the country had better prepare itself for a stiff dose. Developments in East Pakistan also acted as a deterrent; revolution across the borders is scarcely conducive to a good market. Selling, however, was not heavy. Operators preferred to await definite hints about the measure of taxation and whether it was going to hurt industry and capital formation. They will support the market if the corporate sector is spared additional burden.

Textiles were in a rather bad way particularly after Mr Neville Wadia warned that current year's performance of the industry may not be as good as 1970. The leaders—Century, Standard and Kohinoor—were marked down. Bombay Dyeing was quiet. Selling in Standard, despite a higher dividend, was apparently due to receding hopes of a bonus issue. Century Enka, among rayons, was also subdued. At the end of the week, Century was mentioned at Rs 849 against Rs 854, Standard at Rs 655 against Rs 688 and Kohinoor at Rs 245 against Rs 251.

A notable counter was United Commercial in the banks section which came in for wide fluctuations on contradictory assessments of the usefulness of its reported merger with Aul. Against its last week's quotation of Rs 96, the scrip was bid up to its week's high of Rs 110 and was quoted at Rs 100 at the end. Scindia among shippings attracted some support on talk that it would make a bid to acquire Jayanti Shipping. The quotation at the end of the week was Rs 21.60.

Engineerings were generally well held under the lead of Telco particularly after its merger scheme with Central Bank was upheld by the High Court. Voltas held its ground. Others were dull but generally steady to quiet. Bayer and Herdellia were also in demand, on ideas that both were well on their way to an impressive show. Price movements in Synthetics and Chemicals were wide on alternating reports about the dividend which is due to be announced any moment. Indian Dyestuff and Tata Chemicals were quietly steady.

Steels were dull but quietly steady. Miscellaneous issues were bought and sold on individual merits. Motors attracted scattered support.

COMMODITIES

Spot cotton forges ahead

BOMBAY, March 31

On keen spinner demand cotton prices during the past week ruled firm, the gain over the week ranging from Rs 125 to Rs 350 per candy in quite a few cases. Strangely enough, one or two varieties showed losses ranging from Rs 75 to Rs 175 following temporary withdrawal of support by the mills. The sentiment has been mainly influenced by the prospects of cotton yarn exports to Burma in the wake of the recent deal involving the Cotton Textiles Export Promotion Council, Bombay, and its counterpart in Burma.

Meanwhile, trade circles in Bombay are perturbed by the statement made by the Union Minister for Foreign Trade regarding the eventual take-over of all cotton imports. There is also apprehension over the possible action that the Government of Maharashtra would take in respect of its much-talked-about procurement scheme.

The following has been the trend of prices of some of the leading varieties:

	(Rs. per candy)	For the week ended March 31	For the week ended March 24
Khandesh ..	2,725	2,725	2,725
Berar AK ..	2,550	2,550	2,200-2,300
Digvijay Dabhoi ..	3,000-3,025	3,100	
Berar L 147 ..	2,750-2,800	2,600-2,600	
Kalyan 797 ..	2,300-2,325	2,425-2,450	
Manavadar CO2 ..	2,925	3,000	

In the import section, two instalments of global quota, which had been released

earlier, were mainly responsible for the fresh interest evinced by the mills and importers for the Sudanese and African cotton. The Cotton Corporation of India has also been keen in finding out suppliers of global cotton on terms and conditions prescribed by it.

On the export front, very little development of note took place during the week. Bengal Deshi registered for export as on March 20 is placed at 118,348 bales against 180,632 bales during the corresponding period last year. Actual exports during the season, as on March 6, have been only 70,722 bales against 112,088 bales.

YARNS SUBDUED

BOMBAY, March 31

Trading was dull in the yarns market during the past week. The prices of art silk yarns which were firm during the past one month receded during the week under review due to improved arrivals from spinners. The slack offtake from upcountry centres also imparted weakness. Staple fibre yarns also followed suit and declined on slack offtake. Cotton yarns were subdued with little price variations.

In the art silk silk yarns section, 150D National Rayon eased by 28 paise to Rs 17.09 and 120D by a like amount to Rs 19.29. 150D Bright Century receded by 26 paise to Rs 16.80. 120D lost 22 paise to Rs 19. 100D Bright South India declined by 16 paise to

Rs 23.15. Staple fibre yarns (2x34 nF) spot Kiran was subdued by 22 paise to Rs 11.62.

TOUGH TIME FOR OILCAKES

BOMBAY, March 31

Exports of groundnut extractions will face rough weather in view of the recent Geeda delegation to Japan having reportedly conceded the demand for aflatoxin survey. The survey will be done at ports of shipment but by Japanese surveyors. The aflatoxin dispute has been there for quite some time and latest reports confirm earlier fears that Japan will henceforward prove a difficult market.

Market men say that the 10 per cent fibre clause (instead of 12 per cent) might lead to the exclusion of the whole of Gujarat which account for more than 60 per cent of the country's exports of groundnut extractions. Britain has been extremely dull and no large inquiries are expected from that country in the foreseeable future.

Reports also say that socialist countries have been allowed by the conference lines a concessional rate of \$23 per metric tonne while Indian exporters are asked to pay \$31.05. Responsible men in the market have expressed their indignation about this and particularly so in view of recent reports that these countries are dumping Indian goods on hard currency areas which have been India's traditional markets. They also want to know what have Indian shipping interests been doing in the matter.

Another disappointing news is the decision of the Government of India discontinuing the export incentive of 12.5 per cent on f.o.b. value available against exports of decorticated cottonseed extractions. Exports made from April onwards would not qualify for any cash incentive making overseas business extremely difficult. Recently Yugoslavia bought about 8,000 tonnes and outstanding commitments are estimated at around the same quantity.

COMMERCE

YEAR BOOK OF PUBLIC SECTOR 1970

A reference annual of the public sector in India compiled by

Commerce Research Bureau

- Investments and returns of Central Government undertakings
- Basic information about Central and State Government undertakings
- Profiles of major public sector companies
- The history of the public sector—a chronological survey of important events in the development of public sector in India
- Specially processed, exhaustive statistical information
- A comprehensive bibliography of selected reading for those who want to further their studies about the public sector
- And, for the first time a comprehensive

Who's Who of Public Sector Executives

This authoritative reference volume is indispensable for all those interested in the Indian economy

LABOUR GAZETTE

Started in 1921, the *Labour Gazette*, issued monthly, is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. It contains statistical and other information on consumer price index numbers for working class, industrial disputes, absenteeism, trade unions, industrial relations, cases under labour laws, glimpses of industrial awards, labour legislation, etc. Special articles on matters connected with labour and industrial relations are published from time to time.

33, BROADWAY, MADRAS-1

A dream today, a reality tomorrow

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

INDIA STEAMSHIP CO., LTD.
"INDIA STEAMSHIP HOUSE", 21, OLD COURT HOUSE STREET, CALCUTTA-1

Groundnut oil and seeds remained quiet owing to heavy summer crop arrivals at the terminal centres but castor and linseeds maintained a firm tone on sustained bull support. In view of the sizable premiums which spot material is commanding, tenders in the maturing contracts are expected to be very small, if at all goods are going to be tendered. Arrivals have been small but exporters are actively supporting the spot oil market. Recent developments in Pakistan have been influencing the market bullishly.

Comparative prices in rupees were:

Item	24-3-1971	31-3-1971
Castor April ..	138.50	144.50
Castor June ..	135.00	140.00
Linseeds April ..	155.25	162.50
Linseeds July ..	154.25	167.50

Linseeds Bold ..	156.00	166.00
Linseed oil ..	36.50	37.50

FOODGRAINS RECEDE

BOMBAY, March 30

The prices of foodgrains in the local grains market generally declined during the week under review. Among coarse grains,

the prices of bajra (superior) declined by Rs 3 to Rs 62-72 per quintal owing to the slack demand. The daily arrivals were around 390 bags. Maize at Rs 63 per quintal remained unchanged. The inflow was nominal. In pulses, gram (Punjab), receded by Rs 3 to Rs 84-85 per quintal. This fall was attributed to slack demand in the face of satisfactory arrivals. Urad (Khandesh new) moved up by Rs 8-10 to Rs 148-155 per quintal on account of good demand and poor inflow. Tur (Berar White) at Rs 112-113 per quintal showed a modest fall of Rs 2-3 due to heavy arrivals from producing centres and slack demand. The daily arrivals were around 300 bags. Activity in tur was moderate. Moong (Chinal) remained steady at the week-end price level of Rs 170-200 per quintal.

SUGAR MOVES UP

BOMBAY, March 30

The prices of sugar (C-30) in the local sugar market showed an up trend during the week under review. The prices of sugar (C-30) moved up by Rs 2-4 to Rs 188-190 per quintal. This rise was attributed to the lower allocation of levy sugar quota to the State. Besides, there was heavy festive demand for sugar. Today, tenders of 8,000 bags were disposed of by the co-operative sugar factories at higher rates of Rs 182.50-183 and Rs 184-186 for 'D' and 'C' grades, respectively.

FOODGRAINS EASY

HAPUR, March 29

Foodgrain prices ruled easy during the week under review. Beginning of arrivals of new rabi grains in the markets and selling pressure of old stocks were the main influencing factors. Wheat, rice and coarse grains prices sought lower levels and prices in the pulses section were also subdued with the arrivals of new peas gradually mounting.

Wheat average was quoted at Rs 72.50 to Rs 77.50 and superior farm at Rs 85 to Rs 90 per quintal as against Rs 78.75 to Rs 82.50 and Rs 92.50 to Rs 105 respectively quoted last week-end and red mexican variety which was quoted at Rs 75 a quintal last week-end was quoted at Rs 70 a quintal. Arrivals of new wheat in very small quantity was reported at the week-end but arrivals of old stuff mounted to an average of 1,000 to 1,250 mds a day.

Among coarse grains gram prices drifted lower as new crop was reaching the markets in east UP. Demand was reported slack. Stocks of barley and bejhar were sparse and new crop was yet to reach the markets.

SUGAR ADVANCES

HAPUR, March 29

Sugar prices displayed a rising trend during the past week on brisk demand in the face of hesitant offerings by the millers. The release of the monthly quota failed to check the upward trend. Seasonal demand revived during the week and good enquiries from Assam, Rajasthan, Punjab, Haryana and parts of UP were reported. Rumours of likely increase in levy sugar prices also led to speculative buying and as a result spot sugar prices advanced sharply to Rs 180 to Rs 195 a quintal. Retail prices were quoted at Rs 1.95 to Rs 2 a kilogram.

As a result of sharp rise in gur and khandasari prices supplies of cane to sugar factories at their cane purchasing centres

declined but was still reported adequate to meet the day-to-day needs and feed sugar factories.

Despite unusually daily heavy arrivals at this time of the year at an average of 5,000 maunds, gur prices recorded sizable gains during the earlier part of the week on around brisk buying support but prices recorded at the week-end a sagging trend due to loading restrictions.

KIPS STEADY

MADRAS, March 27

Arrivals of stocks from the tanning centres have been on the usual scale and off-take kept pace with the arrivals. Prices remained steady to firm. Overseas inquiries were persistent for cow hides inferior fifths in light and medium weights and stocks offered were readily booked. For cowcalf, exceptionally good demand was in evidence at improved prices. In buffcalf, inferior selections were freely cleared.

Lower ends in goat skins 8/9 lbs average were in good demand, while higher selections elicited little inquiries. Prime sheep and wool sheep skins were firm.

BULLION WEAK

BOMBAY, March 31

A week sentiment characterised trading in the bullion market during the past week. Silver which was firm last week lost ground during the week due to increased inflow in the absence of upcountry demand. The weak overseas sentiment also imparted weakness. Gold which touched new highs last week receded to the background as the rumour of the demonetisation was officially denied. The increased inflow also imparted weakness.

Silver (.996 fineness) began the week Rs 3 higher at Rs 588.50 but lost ground in the following sessions. It declined further in the subsequent sessions and moved at between Rs 588 and Rs 586 before closing still lower at Rs 585 today, the net loss over the week being Rs 3. The weekly delivery was mentioned at between Rs 588 and Rs 586. The weekly average arrivals and off-take of silver aggregated 26 bars and 13 bars respectively.

Primary gold in unofficial trading commenced Rs 2 higher at Rs 195 but declined in the following sessions. It receded further and closed the week at Rs 185 today, the net loss over the week being Rs. 8. Standard gold in official trading opened fifty paise at Rs 197 and declined in the subsequent sessions. It wound up at Rs 193 today, the net loss over the week being Rs 4. Sovereign was done at Rs 173.

CALL RATE EASES

BOMBAY, March 31

Stringent conditions continued to prevail in Bombay's short-term money market in the past week. However, the call rate eased by one per cent to 10 per cent.

In Calcutta renewals were done at 10½ per cent.

During the week ended March 19, foreign exchange reserves of the Reserve Bank of India declined by Rs 0.99 crores to Rs 370.50 crores. While foreign securities rose by Rs 5 crores to Rs 288.42 crores, balances held abroad came down by Rs 5.99 crores to Rs 102.08 crores. Notes in circulation decreased by Rs 29.25 crores to Rs 4,255.31 crores. Loans and advances to scheduled commercial banks rose to Rs 442.82 crores from Rs 395.67 crores.

Week ended March 19 marked an increase of Rs 23.09 crores at Rs 4,663.96 crores in the total credit made available by scheduled commercial banks. Aggregate deposits declined by Rs 17.81 crores to Rs 5,842.37 crores. Borrowings from Reserve Bank were higher at Rs 442.82 crores (Rs 395.67 crores).

Notices

ALBRIGHT, MORARJI AND PANDIT LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FIFTH Annual General Meeting of the Shareholders of the Company will be held at Walchand Hirachand Memorial Hall, 76, Veer Nariman Road, Bombay-20 (BR) on Thursday, the 22nd April, 1971 at 4.00 P.M. HMT ELECTRICALLY CONTROLLED MILLING MACHINE EM3. REDESIGNED AND READY FOR YOUR UNCONDITIONAL APPROVAL

Based on the experience of customers with our F3 model, we have modified it to bring you the redesigned HMT EM3 version.

Feed box is much stronger and more powerful to take up heavier feeds. There are five electro-magnetic clutches. And a composite feed selector switch unit.

Feeds are up to 24. The feed range: 8 - 1600 mm/min.

The table has had its share of excitement too. Vibration dampers. Balance weight. And 20 mm. more thickness. To make the machine vastly improved in strength and stability.

Then the coolant return. We've devised a short return for it. It now returns directly from the table to the base plate through a connecting hose pipe. You know what it means. The coolant won't ever enter the knee, even if the covers are loose. Clogging? Never.

In other words, the EM3 is far more versatile and accurate now.

We can also provide special cycles to suit your components, using the "Progmato" multi-station (20) programme control unit. Your machining time is down. Productivity is up. Accuracy is unfailing. And rejects cut to the minimum!

Tell us your precise milling requirements. We'll tool up the EM3 to suit them.

New approach to industrial growth?

THE Government of India seems to be still debating over the socio-economic programme to realise the objectives so vociferously announced by the Congress (R) during the elections and after. There were many occasions for the Government to give clear indication of the programme if it was ready even in bare outline. The debate on the Motion of Thanks to the President's Address to the two Houses of Parliament, the debate on the interim budget and the AICC (R) session at New Delhi provided the occasions quite important for the announcement of such a programme. The leaders of the Government and the party, however, confined themselves to generalisations and exhortations. Mr Y. B. Chavan moved the resolution on "Pledge to the People" at the AICC (R) session. His main theme was that the election results had cast a heavy responsibility on the Congress (R) and if it failed to honour the pledges given to the people, history would not forgive it. This was also the burden of the speech of Mr Jagjivan Ram who piloted the resolution on "Tasks before the Party" at the session. Not only the leadership but even the more radical elements in the party confined themselves to old slogans of abolishing privy purses, fixation of ceilings and of restoring the supremacy of Parliament in amending the fundamental rights chapter of the Constitution. Even if one has to concede that from the point of view of ideology these demands have some substance, it is difficult to imagine how their implementation can help in the realisation of the main objective on which the election was fought, namely the abolition of poverty in the country.

Of all the speeches delivered in Parliament and at the AICC (R) session Mrs Indira Gandhi's alone appeared to show some conception of the dimensions of the tasks that lie ahead. In her reply to the debate on the President's Address she cautioned the people that the path to progress was hazardous and the progress would be necessarily slow because of the gigantic nature of the problem.

In another speech in the Rajya Sabha she said that production, prices and employment were inter-linked. Increased production could stabilise prices and create more employment. This clearly shows that in her opinion the crux of the matter lies in stepping up the rate of investment in the economy. This investment has to be employment-oriented and should be directed to those sectors of the economy that can produce goods in short supply today. Here is a formula which if properly implemented can go some way in the direction of the realisation of the aspirations of the people.

The problem is how to generate investible funds in the economy which can be canalised into employment-oriented units of production. The hurdle in this programme is clearly the present industrial licensing policy of the Government. It is said that the main objective of this policy is to ensure that there is no concentration of economic power in a few hands. Granting the desirability of such an objective it remains to be examined whether a fresh appraisal of the policy designed to achieve the end should not be undertaken. When the Monopolies and Restrictive Trade Practices Act was originally framed the banks had not been nationalised and therefore the Government had to depend upon physical control in order to achieve the desired results. After the bank nationalisation, however, it is possible for the Government to manage the bulk of the money in the country in a manner it considers best. Once this powerful tool is in the hands of the Government licensing loses much of its significance.

Again, it is a point worth considering whether a complete embargo on the larger industrial houses participating in employment-oriented activities is desirable. Theoretically there could be some justification in the argument that these houses should concentrate on sophisticated industries requiring huge capital investment. The question, however, needs to be asked whether under the present economic climate in the country the industrial houses

would be in a mood to undertake this kind of investment. Unless there is a sufficiently large market for the products of sophisticated industries no experienced entrepreneur would think of locking up his funds in these industries. We thus face the worst of both the worlds. On the one hand investible funds are lying idle with the larger industrial houses and, on the other hand, there is a great dearth of such funds for activities which have been given priority by Government policy-makers. Such a state of affairs should end. There are some indications that the Government is having second thoughts on these policies. Replying to a question in Parliament, Mr Moinul Huq Choudhury defended the recent issue of licences to larger industrial houses on the plea that they were meant for establishing industrial units in the backward areas. If this really means a change in the thinking of the Government it has to be welcomed. If a serious thought is given to the subject the Government would realise that there is no danger in allowing the larger industrial houses to establish employment-oriented units of production. This will serve the very purpose which the Prime Minister has been emphasising recently.

Of course, this is only a part of the solution. It is mainly the responsibility of the banking system to induce people to save. Fiscal measures can be of considerable help in this direction. The concessions so far given in the matter of taxation have not produced the desired results. Perhaps a time has come when there should be a clearer distinction between consumption and saving for the purposes of taxation. It must be worth the income receiver's while to forego his present consumption in order to reap better benefits later. This presupposes the maintenance of the value of the rupee over a period and also sufficient yield on savings to induce postponement of spending. Mr R. K. Talwar, Chairman of the State Bank of India, in a recent speech has advocated larger interest on deposits. This suggestion needs to be considered. There is also the larger question of credit planning so as to serve the needs of the economy. There is nothing new in these suggestions. But unless these problems are tackled on a priority basis, there would be loss of time which the Government leaders want to avoid. Now that we have a stable Government at the Centre, it is the duty of this Government to take decisions on all these matters at an early date and to stick to them for some time. This will be possible only if policies are formulated in the context of the realities of the situation as also of the objectives sought to be achieved.

Link-up for ancillaries

GOVERNMENT spokesmen have often lamented the slow growth of ancillary units in the country. The general charge has also been levied that large-scale units have shown little interest in the development of this sector which has carved for itself an important role in the industrial structure of the advanced countries such as the United States, Japan, West Germany and France. But there has been practically no attempt to go into the causes of the lag in the growth of ancillary industries and the lack of proper relationship between these units and the large-scale industrial sector. The recent conference on ancillary industries in Maharashtra, organised by the Maharashtra Economic Development Council, was thus of significance even though the area of its investigation was limited to only one State. The problems of the ancillary units in Maharashtra may not be identical to those of units in other parts of the country, but because of its industrial growth the State does serve as a representative unit for appreciation of the issues involved. With over 1,100 large-scale and 261 medium-scale enterprises and 12 public sector undertakings, Maharashtra offers large scope for the development of ancillaries. Such units have sprung up in the field of automobiles, industrial machine building, radio and electronics, oil engines and agricultural equipment industries, but they are mostly concentrated in four or five places including Bombay and Poona and produce goods worth not more than Rs 3 crores per year and employ only 20,000 persons. Also, just a little over 200 large-scale undertakings are served by them. These figures by themselves indicate the unexplored areas.

Surprisingly at the conference, entrepreneurs associated with ancillary units voiced no particular grievances against the large-scale units on the issue of building a relationship with them. They appear to be more concerned with the difficulties in securing raw materials and finance and the locking up of large funds in credits to buyers. There was the same haziness in their ideas about this relationship as with the large industrial undertakings in regard to the concrete measures that they can profitably devise to ensure the production of a large number of parts and components in the ancillary sector, assure a more or less stable market for the ancillary products, evolve procedures of standardisation and quality control and make available technical expertise at various levels. As a report by the Council based on a survey of about 100 ancillary industrial units in Bombay brings out, the large-scale parent units almost stop at making grievances against ancillary units in respect of irregular delivery schedules, lack of technical competence and non-adherence to standards, specifications and quality. The ancillary units on their part feel that there is no regularity or stability in the placement of orders by the parent units and that in negotiations more consideration is given to the price advantage than to the technical complexities of the job and the cost of production involved. Their complaint is that the parent units with a few notable exceptions are not willing to provide raw materials and technical assistance when the need for these is keenly felt by them. On top of this, they have to face financial difficulties because the large-scale units do not promptly clear the bills. Interestingly, as many as 41 of the 100 units surveyed said that each one of them had funds to the tune of more than Rs 1 lakh locked up in credits to the parent companies for up to two and three months.

In a large measure, the pace of development of ancillaries will be dictated by the link that they develop with the large-scale sector. This has been particularly evident in Japan where ancillary industries have been fostered by large-scale manufacturers who help them with guidance in management, technical know-how and also capital. It may be that such relationship is facilitated when there is mass-scale production, but this is not a necessary pre-requisite, and in France, for instance, the system of sub-contracting is adopted by all business enterprises regardless of the size of the units. What is essential to be acknowledged by the large-scale manufacturers is that the development of ancillaries is mutually advantageous. At the Bombay conference mention was made of Tata Engineering and Locomotive Co (Telco) and Kirloskar Oil Engines taking the initiative in helping 600 ancillaries to grow and of Escorts and Enfield India establishing industrial estates for captive ancillary units. Reference was also made to the efforts of 12 major public sector undertakings, including Hindustan Machine Tools, Bharat Electronics and Heavy Electricals, to develop ancillary industries. Such examples need to be multiplied and our large-scale units could even profitably take up the development of the existing ancillaries and help in the establishment of new ones by guaranteeing a definite and regular market for their products.

The Bombay conference also drew attention to two other hurdles in the way of growth of the ancillaries. By and large, the various institutions established by the Central and State Governments for promoting the small-scale sector would appear to have failed to help these units. There is widespread dissatisfaction over the way these institutions function, which suggests an urgent need for reorganisation of these institutions. There is also the feeling that the banking system, even after the nationalisation of 14 major banks, has not been particularly helpful to the small-scale sector. There may be an element of exaggeration in this and it could also be that the small-scale units do not measure up to the rigorous financial discipline which the banks expect them to follow. Essentially this is a problem of management, and the Bombay conference had proposed the creation of a separate organisation to render co-ordinated services to the small-scale entrepreneur. Whether this is a feasible proposition remains doubtful. More beneficial perhaps would be for the ancillaries to seek guidance from the parent organisations with which they are associated.

EVERY time I hear that the Annual Plan outlay would be stepped up, I remain unimpressed. This is a story of unfulfilled promises. This unfulfilment has two elements: one which a layman can easily understand and the other which remains usually beyond his comprehension. As for the first, what happens is that when a big figure is indicated as the Annual Plan outlay in the budget estimates, actual expenditure is much less than budgeted. While no one knows what exactly has been the Plan expenditure during the fiscal year 1970-71, it has been officially admitted that there was a shortfall in the expenditure. A significant part of the budgeted expenditure remains unspent because of the usual delays in the formulation and implementation of the Plan schemes. The other element is related to inflation. In money terms, the outlay in a particular year may be higher than that in the preceding year. But because of the gradual erosion of the real value of rupee, the increase is not as large as it appears in terms of the usual budgetary data which are always at current prices. This can be clearly seen from the following table:

(Rs in crores)

	At current prices	At 1965-66 prices
1965-66	2,291	2,291
1966-67	2,137	1,876
1967-68	2,205	1,735
1968-69	2,361	1,878
1969-70	2,270	1,741
1970-71	2,822	2,051

Thus for the fiscal year which has just ended, the budgeted Plan outlay was Rs 2,822 crores. On the face of it, this seemed to be 23 per cent above the 1965-66 level. But if we take into account the important fact that between 1965-66 and 1970-71 the prices increased by 38 per cent, it would appear that valued at 1965-66 prices, the 1970-71 Plan outlay would be only Rs 2,051 crores, i.e. 10.5 per cent less than the 1965-66 level of outlay. It is high time the Government took notice of this phenomenon. The least it could do is to stabilise prices so that the real value of the Plan outlay is not eroded by the shrinking real value of rupee. In the meanwhile, all figures of Plan outlay published in the Government documents should be in terms of prices of a base year, say 1965-66. This will give a real and objective picture of the Plan outlay year by year and put an end to the time-honoured dishonesty in regard to the exact magnitude of the Plan outlay.

★

The rich industrialised societies today are debating the issue whether the exclusive pursuit of economic growth is in tune with the quality of life. It is also asked whether the rise in national income is of any benefit to the weaker sections of Western societies. Growth also leads to pollution and other problems. So it is suggested that the yardstick of growth might have to be abandoned in favour of other life-enhancing considerations. The OECD Secretary-General has also participated in this debate. I found his following observations stimulating:

(1) *First of all, the increase of production (and of income), while it is not an end in itself, is an essential means for satisfying man's needs in many fields. To escape from poverty, from under-nourishment, to give everybody a job, a home, a proper education, and better medical attention—these are priority social aims which can be*

satisfied only by increased national wealth. Moreover, because of growing population, a rising GNP will be needed merely to sustain present living standards and to avoid a decline in social well-being. (2) Secondly, even if it were somehow possible to limit growth, it does not follow that this would automatically restore a good physical environment. We would still be faced with current levels of air and water pollution, noise, crowding and congestion; at most we might succeed in arresting the process of further degradation. The solution, I believe, is not to abandon growth but to encourage growth of the right kind by wisely allocating our limited resources; not to curtail production but to create new mechanisms and institutions which would more effectively cope with the "externalities" which presently are not taken into account in the framework of our market mechanisms.

Talking with a knowledgeable banker the other day, I came to know about some unorthodox methods that the Chinese are adopting to promote exports. Having learnt that Bleeding Madras is very popular in West Asia, the Chinese started printing similar designs. For textiles in general, their price quotations were put down in a simple formula—5 per cent less than the Indian quotation. And finally, in a bid to earn the maximum possible foreign exchange, they started taking shiploads of consumer goods to the West Asian countries and auctioning the goods on the spot in the port towns. Whether one approves of these methods or not, the net result has been that the Chinese are gaining in these markets at the expense of India. One should not complain about the Chinese method. They are promoting their own national interests. I would, however, certainly complain that we are not promoting our national interests with the same vigour and resourcefulness. Despite all this fanfare of export promotion, we have lost a good part of our exports because of our policy of drift. My banker friend made two suggestions about promoting our exports in the West Asian countries. First, we should open a large number of warehouses in these countries. If we did this, we can sell our goods on the spot. Secondly, we should open a chain of branches of Indian banks to promote our exports to these countries. Of course, there is no substitute for an aggressive salesmanship on the spot in these markets. But if these two facilities are provided, aggressive salesmanship can give us quick and spectacular results and it is only then that we can fully reap the two advantages that we potentially enjoy in these markets, viz geographical proximity and consequent smaller transport cost.

Is industrial research in the United States being reoriented to the needs of the balance-sheet? The American business magazine *Fortune* reports that after the boom in industrial research which resulted in a four-fold increase in the corporate spending on basic and applied research during the period 1955-70, it is changing its direction. Business executives are engaged in tackling the baffling job of improving research management. A few pro-

grammes of fundamental research are being dropped and the focus on research is now tied more closely to corporate goals. There is a definite retreat from basic research. Now the slogan is more applied research for quick profits. *Fortune* is concerned about this tendency because of the fact that the Federal Government of the United States is also drastically reducing its research efforts. This trend is considered disturbing because there may not be enough fundamental work in the seventies to provide the base for applied research—new products and profits—in the eighties. It is no coincidence that industries which had a dismal record in research such as rail roads, steels and textiles are now asking for governmental help to overcome their weaknesses in their markets.

Fortune also makes the following observation about the management of scientific personnel:

One of the trickier problems facing managers of industrial research is handling the people who do it. It isn't that researchers are otherworldly tinkers indifferent to the profit motive. But workers at the laboratory bench are different from their counterparts in sales, finance or production. . . . Scientists tend to resist the usual rules on appearance as a trivial and unnecessary infringement of their personal freedom. Theodore Cairns, the assistant director of Du Pont's central lab, advises: "Don't worry about the time your researchers come to work or whether they were sneakers. That's about as much I know about management." Research specialists also balk at taking detailed directions from non-scientists and demand that they be judged professionally only by their peers. While they are rigorously systematic in their investigative methods, they tend to be highly informal in professional relationships. The most valuable information exchange among these bright minds frequently takes place across the lunch table or over a game of chess. . . .

The crash of Rolls-Royce shook the British people as much as some defeat in a theatre of war. Rolls-Royce was a symbol of British excellence. The word Rolls-Royce was therefore as great as Union Jack and the English Monarchy. The racist Conservative leader, Mr Enoch Powell who is also an unorthodox thinker has made some perceptive comments on the crash of Rolls-Royce. He said that the belief that prestige can be separated from success was one of the symptoms of Britain's decline. Mr Powell then made these stimulating observations:

Above all, the confusion between patriotism and profit, between sentiment and business—if you like between the nation's hobbies and the nation's work. Thus the truth was perilously forgotten that it is as harmful to do a job too well as to do it too badly, but there is no more virtue in craftsmanship, for its own sake, than in slovenliness for its own sake; that the best job is the job that yields the best return, and he who does more is depriving himself and his fellows as surely as he who does less; that there is no argument in favour of pursuing an old calling if the same resources will earn more profit in new ones.

MARKET GOSSIP

New image for FICCI?

THERE is an undercurrent of anxiety among some businessmen in Bombay as the date for the election to the 60-member executive committee of the Federation of Indian Chambers of Commerce and Industry due next week draws nearer. It is recognised that the Prime Minister and the Ruling Congress have emerged stronger after receiving the mandate in the general elections. In the changed circumstances, trade and industry has to establish a new rapport with the decision-makers in Delhi who are committed to certain economic programmes. Some wonder to what extent the FICCI would be able to achieve this task. This is because some of the leading lights of the Federation were associated with political groups with whom the Prime Minister had waged a bitter struggle in the past. Fears are entertained in Bombay that the association of such elements with the policy-making body of the FICCI may not be helpful for the cause of trade and industry in any future dialogue with the Government. The Finance Minister, Mr Y. B. Chavan's outburst at an election victory meeting in Bombay against industrialists who had supported an independent candidate against the Congress is also thought of as an indication of the way the wind may blow in future. The businessmen are, therefore, debating whether it would be advisable to elect persons whose political leanings in the past may cause needless friction between the industry and the Government.

The elections are being held on the basis of an amended constitution. The FICCI has 220 associations of trade and industry as its members. They have to elect 20 members representing trade sector and 20 to represent industries. There are also over 400 associate members with a voting strength varying from one to three each who elect 20 members of the executive committee. These are mostly representatives of the major industry houses that are still remaining with the FICCI. A section of businessmen thinks that if the Federation continues to be dominated by some groups it would affect its representative character.

Another look at licensing

THE new Minister for Industrial Development, Mr Moinul Haq Choudhury, has talked of a "flexible approach" towards implementing the Government's industrial licensing policy. The Prime Minister has also talked in terms which would suggest that the Government would like to follow a pragmatic policy in regard to industrial growth. Reports have it that Mrs Gandhi believes that some improvements could be brought about in the licensing policy. She is said to have asked the well-known economist, Prof P. N. Dhar, to go into the origin and development of the licensing policy and make recommendations to remove the hardships associated with it. Prof Dhar is said to be already engaged in this task and is busy going round the various Ministries concerned in the fulfilment of the assignment given to him.

Whether Prof Dhar's report will help inject a flexible and pragmatic approach into the industrial licensing policy, in the search of which Mr Choudhury is engaged, remains to be seen. But the fact that the Prime Minister has thought it fit that Prof Dhar should have a look at the licensing policy suggests that the Government feels that the grievances voiced against the operation of this policy are at least worthy of being examined.

Costlier capital

THE capital market has certainly been more responsive in recent months. This is evident from the capital issued during the first three months of the current year. The amount of Rs 11.7 crores was considerably higher than the figure of Rs 9.3 crores issued during January-March last year. There is another factor which also points in the same direction. Excluding bonus shares, consents for capital issues by 29 companies aggregated Rs 21.7 crores during January-March 1971 compared to Rs 13.3 crores by 12 companies in January-March last year.

At the same time, the cost of raising capital is going up. Latest data are not available. But during 1969-70, according to the official Annual Report on the Working and Administration of the Companies Act, 1956, the cost of raising capital for an amount of Rs 43 crores, of which Rs 41.4 crores was offered to public, worked out to Rs 1.84 crores. This amount included expenses such as underwriting, commission, brokerage, advertisement expenses and legal charges incurred by the companies issuing new capital. In terms of percentages, the cost of raising capital worked out to 4.3 for the total amount issued and 4.4 for the amount offered to the public. In the previous year, issue expenses in respect of the total amount raised worked out to 3.2 per cent and for the amount offered to the public to 3.3 per cent.

A further interesting point is that it is much more costlier for the new companies to raise capital than for the old companies. Of the Rs 43 crores, total amount issued by the new companies was Rs 3.69 crores and the amount offered to the public was Rs 2.97 crores. The total issue expenses worked out to Rs 17.7 lakhs, which meant that for the new companies the cost of raising capital as a percentage of the amount offered to the public was 6 for the new companies compared to 4.5 per cent for shares and 4.3 per cent for debentures issued by the old companies. There is also the point made in this report that at least during 1969-70 the response of the public to the capital issues was not that good. Of the total amount of Rs 41.4 crores offered, only Rs 11.78 crores or 28.5 per cent were subscribed by the public, while the underwriters subscribed either as investors or underwriters Rs 29.53 crores or 71.3 per cent of the capital offered. Public response was better towards equities than towards preference shares and debentures. While equities worth Rs 7.15 crores out of the total of Rs 10.76 crores were bought by the public, in regard to preference shares the subscription

amounted to only Rs 93 lakhs towards a total of Rs 4.44 crores and that for debentures was Rs 3.70 crores against Rs 26.20 crores offered.

RBI relets

THE Reserve Bank's decision last year that commercial banks should make a commitment charge at the rate of 1 per cent per annum in respect of the unutilised portion of credit limits of Rs 10 lakhs and above was no doubt a good measure of enforcing fiscal discipline. But the stipulation that the unutilised portion of credit limit should be taken as the difference between the maximum limit of utilisation during any quarter as indicated by the borrower and the average amount utilised by him in the said quarter resulted in some difficulties. The RBI has, therefore, done well to change this stipulation and permit the borrowers to indicate their maximum requirement on a monthly basis instead of on a quarterly basis. No commitment charge will be levied by a bank if the average monthly/quarterly utilisation does not fall short of 95 per cent of the maximum monthly/quarterly requirements indicated by borrowers. The new procedure also lays down that no charge should be levied in excess where drawings by parties exceed the indicated limits by not more than 5 per cent for a period not exceeding one week. This change has been effected to bring about uniformity in the procedure for charging penal rates on excess drawings.

Declining sugar stocks

THE problem of carryover stocks has been worrying the sugar industry for the past two years. The current season began with a carryover of 20.8 lakh tonnes as against 13 lakh tonnes in 1968-69. The Government did not come to the rescue of the industry in the manner the industry had sought, namely, building up of a buffer stock. However, there are indications that much of the pressure for funds on account of stocks with the industry may decline. The despatches of sugar in the current season, from the beginning of October to February 22, indicate that nearly 15 lakh tonnes went to the domestic markets and another 1.13 lakh tonnes were absorbed by exports. Thus the despatches are higher by 3.75 lakh tonnes as compared to the corresponding period in the 1969-70 period. As it is, the stocks with the industry were 27.5 lakh tonnes as on February 22. These stocks were no doubt higher by 4.8 lakh tonnes as compared to the position a year ago. But then if the fact that stocks at the beginning of the season this year were higher by 7.8 lakh tonnes is taken into account, it would appear that sugar is moving faster out of factory godowns than during the last season. Sugar production this year may be less by about half a million tonnes as compared to that of the preceding season. With higher despatches of sugar and somewhat lower production, the size of carryover stocks is bound to decline.

Because of paper!

First halting utterances learnt at mother's knees.

First hints of knowledge. .

But later in life all what our mothers' tongue had taught us seems only a starting point.

New facts have to be learnt to live.

That is possible because of paper.

A fact which 65 million new literates in India learnt between 1961 and 1970.

And West Coast Paper is fulfilling the need of more, and better, writing and printing paper.

Paper that promises social and economic progress. .

West Coast Paper

SURVEY

DEFECTIONS TO SAFE HAVEN

THE developments in a number of States after the mid-term elections seem to suggest that we are yet far away from stable government, at the State level. Before the elections defections were either due to lure of position or, in some cases, it is alleged lure of money. After the elections, however, the motivations for defections have changed. Some of the politicians seem to think that they were in a wrong camp and if they wanted to advance in their political career they could do so only by joining hands with forces that have a popular appeal today. To be more frank, they want to leave the ship which they think is sinking and want to take refuge in a safe haven. Given the logic of political activity, this desire is understandable. But these aspirants to power and position at any cost have to reckon with the resistance of those who already occupy a vantage position. This seems to have happened in Mysore and perhaps also in Gujarat. At the moment the Congress (O) is back in power in Gujarat. This has been made possible by a few of its members who had defected returning to its fold. It remains to be seen whether the present strength of the ruling party will stabilise at 81 in the House of 164. If there are defections again it will be necessary to appeal to the electorate and to get its verdict not only on policies but also on people who might have vacillated too long. Reports on Wednesday have suggested that Congress (R) might form a Government in Mysore. But, as in Gujarat, it remains to be seen whether stability will be restored there or a fresh election will have to be held. It is unlikely that a poll, even if essential, will be held before 1972. The picture there, too, thus still remains unclear. []

MORE OF JANATA CLOTH

THE Government's concern for ensuring cloth at reasonable prices to the lower strata of the community can be appreciated. But whether this will be best achieved by increasing steeply the production of controlled varieties of coarse and medium varieties of cloth is doubtful. The Foreign Trade Minister, Mr. L. N. Mishra, has announced that the reserved quota for such varieties will be raised from the present 25 per cent of a mill's capacity to 40 or 50 per cent and that, in order to ensure that the mills fulfil their obligation, the penalty for non-fulfilment of the reserved quota will be increased from 6 paise to as much as 25 paise per metre. For one, such a proposal assumes that the market for coarse and medium cloth is much larger than what is being met at present. This assumption itself rests on slippery ground. Increasingly the mills have been producing finer varieties of cloth and these are being absorbed despite their higher prices because the consumer tastes have changed. The growing share of the costly man-made fibres in the textiles market would go only to confirm this. There is also the fact that many of the mills are finding that their best cus-

tomers for quality cloth are the rural areas in the country which have benefited by the green revolution.

This apart, Mr. Mishra seems to have overlooked the economics of the textile industry which, under the new policy, will have to devote almost half of its production to cloth, the prices of which have been pegged to the 1968 levels. Mr. Mishra has himself admitted in Parliament that the prices of raw cotton have shot up recently and has said that the Government had devised measures to arrest this rise in prices. In fact, he listed in the Lok Sabha some seven steps planned by the Government, including import of 10 lakh bales of cotton and 1.5 lakh bales of staple fibre, to control the prices of the fibre. Higher prices of cotton should mean higher costs of production for cloth. And yet, Mr. Mishra believes that the mill industry should produce more of controlled cloth without being compensated for the higher costs of production. Such a development could only mean that the Government expects the mills to recover their losses on the controlled cloth from uncontrolled varieties, the prices of which, according to Mr. Mishra himself, have risen in some cases by nearly 26 per cent between last December and February this year. Further loading of prices of these varieties could only result in a decline in their consumption which, together with the losses suffered by the industry on controlled cloth, would ultimately find a reflection in the employment provided by the industry. Mr. Mishra could at least make sure that production of coarse and medium cloth, equivalent to half the capacity of the cotton mills industry, will be absorbed by the market before going ahead with his plans. []

A BUDGET FOR COMPANIES

THE deficit Budget of Mr. Anthony Barber, Chancellor of the Exchequer, placed before the British Parliament on March 30 was generally welcomed by both the Conservatives and Labour. The Budget included what was described by Mr. Barber as "the most comprehensive and far-reaching reform of the tax system of the century". The measures announced by Mr. Barber reflected some cautious deflationary approach to tackle the vexed problem of cost inflation and high rising unemployment. According to Mr. Barber, the broad aim of the Budget should be an addition to demand which would be adequate to raise the rate of expansion of output to the rate of growth of productive potential of about 3 per cent per annum. He argued that the Budget alone could not provide the answer to cost inflation and justified his budgetary strategy of tax reliefs for companies and the better-off. The counter-inflationary measures proposed by him were based on the belief that, instead of aids at present to lower further the pressure of demand, the need was for greater confidence in the future progress of the economy. While concessions and reductions announced one after another were received by the treasury benches with great applause, they took much of the wind out of the sails of the

Opposition Labour leaders. In fact, the confidence and the refreshingly new style of the Budget of Mr. Barber stunned the Opposition. Mr. Wilson, the Opposition Leader, however, maintained that Britain was sliding down into a deep recession and the Budget had nothing to arrest this.

Some of the important concessions announced by Mr. Barber were (i) concessions to tax-payers with two children, (ii) increase in old age pension, (iii) old persons tax exemptions, and (iv) a higher limit for estate duty; reduction in selective employment tax and corporation tax; abolition of stamp duty on mortgages and short-term capital gains tax. There were other proposals envisaging the abolition of the longer-term selective employment tax and purchase tax which were to be replaced by a value-added tax and sur-tax phased out to replace the graduated income-tax. These proposals will also have the effect of bringing Britain's tax arrangements more into line with those of the European Common Market, of which she may be a member by 1973. Among the more radical reforms announced by the Chancellor is the complete elimination of the selective employment tax from April 1973. This tax, together with purchase tax which is levied on a restricted range of commodities at the point of sale, will be replaced by the value-added tax, which will bring Britain into line with most other West European countries. Yet, another "root and branch" reform introduced is in the personal direct taxation which will bring about considerable administrative savings and offer more incentive to the individual tax-payer. The changes proposed in the company taxation are expected to remove the tax discrimination existing under the present structure of the corporation tax against distributed profits.

The trade unionist, Mr. Victor Feather, conceded that it was a courageous Budget but regretted that it offered "precious little" to lower income groups. He feared that the Budget gave scope for diversion of the tax concessions given to industry to increasing dividends and profits instead of stimulating the needed growth and increasing demand which was the best incentive to invest. The Budget, however, left a big deficit of £600 million and in terms of public sector spending it is £1,200 million. The measures announced by Mr. Barber will make a cut in revenue of £546 million in 1971-72 and about £680 million in a full year. The treasury estimated that the proposals would add £250 million to demand by the end of 1971-72 and secondary influences would raise this to £350 million. []

STATE BUDGETS

Tamil Nadu

MR. M. Karunanidhi, the Chief Minister of Tamil Nadu, who is also holding the Finance Portfolio, presented the interim budget for 1971-72 to the State Assembly on March 25, 1971. The revenue receipts

are estimated at Rs 338.70 crores and the revenue expenditure at Rs 349.60 crores. The revenue account shows an overall deficit of Rs 10.90 crores. After taking into account the capital receipts and disbursements, the overall position shows a deficit of Rs 12.25 crores. The Chief Minister has not proposed any new taxes to cover the deficit. The important provisions in the interim budget are an expenditure of Rs 79.11 crores on education; Rs 20.53 crores for medical aid; Rs 8.48 crores for irrigation; Rs 14.65 crores for water supply schemes (including the Veeranam scheme) and Rs 31.51 crores for power development. The Planning Commission had proposed an outlay of Rs 80 crores for the 1971-72 Annual Plan of the State, but the State Government had insisted on a minimum outlay of Rs 100 crores. The budget, however, provides for a Plan outlay of Rs 91.1 crores in the State sector and Rs 11.7 crores in the Central sector.

Madhya Pradesh

THE Chief Minister, Mr S. C. Shukla, who also holds the Finance portfolio, presented a taxless deficit budget for 1971-72 to the State Assembly on March 22. The revenue receipts are placed at Rs 257.10 crores and the expenditure at Rs 238.55 crores. Thus, the revenue account shows a surplus of Rs 18.55 crores which is offset by the deficit of Rs 28.60 crores on capital account. The Chief Minister pointed out that the big deficit on capital account is the result of larger Plan spending. As a result, the overall deficit will be Rs 10.05 crores. The Chief Minister has, however, made no proposals for fresh taxation. The overall deficit will be further pushed up by Rs 6.65 crores to Rs 16.70 crores on account of the interim relief granted to the State Government employees. The 1971-72 Annual Plan outlay has been fixed at Rs 91 crores, implying a 21 per cent increase over the anticipated plan expenditure of Rs 75 crores in 1970-71.

Assam

THE budget for 1971-72, presented to the State Assembly by the Finance Minister, Mr K. P. Tripathy, reveals an overall deficit of Rs 30.26 crores. The revenue receipts are placed at Rs 114.36 crores and the revenue expenditure at Rs 120.31 crores, showing a deficit of Rs 5.95 crores. The capital account with receipts at Rs 117.19 crores and expenditure at Rs 131.50 crores shows a deficit of Rs 14.31 crores. No new taxes have been proposed and the entire deficit of Rs 20.26 crores has been left uncovered. The Finance Minister said that in view of the industrial backwardness of the State there is hardly any scope for additional taxation. "The Government would, however, endeavour to step up realisation of arrears, and to restrict unproductive expenditure. Nevertheless, the deficit would not be reduced to any appreciable extent. The Finance Minister hoped that the Central Government would render more assistance. The Annual Plan outlay for 1971-72 has been fixed at Rs 42.21 crores for the State which is higher only by 5 per cent than the current Annual Plan's anticipated expenditure. Top priority has been given to irrigation and power for which Rs 13.44 crores have been provided. A sum of Rs 6.44 crores has been provided for the development of the hill areas.

- While estimating foreign exchange reserves, SDRs transactions that might have taken place after January 1, 1971 have not been taken into account.
- The figures indicate percentage change during the current calendar year upto the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

MR. Hitendra Desai was sworn in by the Governor, Mr. Shriman Narayan, on April 7 as Chief Minister of Gujarat. This was made possible by the support of 14 Swatantra MLAs, 1 Jana Sangh and 3 independent members, to the 81-strong Congress (O) Legislature Party. Earlier the Leader of the Opposition, Mr. Kantilal Ghia, gave up attempts to form a government saying the Congress (R) had not acquired an absolute majority in the House.

Fighting continued during the week in Bangla Desh between the supporters of Sheikh Mujibur Rahman and the West Pakistani army. Meanwhile, the Soviet President, Mr. Nikolai Podgorny, sent a message on April 4 to the Pakistani President, Gen. Yahya Khan, appealing for urgent measures to "stop the blood shed and repression against the people of East Pakistan". This appeal was promptly turned down by the Pakistani President.

Mr. D. Sanjivayya was unanimously elected President of the Ruling Congress at the AICC session on April 3 in New Delhi.

A 25-member non-Marxist coalition Ministry headed by the Bangla Congress President, Mr. Ajoy Kumar Mukherjee, was sworn in on April 2 in West Bengal.

A 7-member Congress (R) Cabinet headed by Mr. Kamalapati Tripathi, was sworn in on April 4 in Uttar Pradesh.

A 14-member United Front coalition Ministry headed by Mr. Biswanath Das, former Governor of Uttar Pradesh, was sworn in on April 3 in Orissa.

Mr. M. R. Masani resigned on April 3 as President of the Swatantra Party.

Dr. Hemchandra Gupte of Shiv Sena was elected Mayor of Bombay with the support of the Congress (O) on April 2.

The Ministry of Company Affairs decided on April 6 to allow under the Monopolies and Restrictive Trade Practices Act vertical mergers of companies which result in greater efficiency in industry and lead to reduction in cost of production.

An agreement was signed on April 3 by the Indian Oil Corporation with Sojuznefteexport, the Soviet oil export organisation, for the import of 400,000 tonnes of kerosene from the Soviet Union till December this year.

A contract was signed in Bombay on April 6 between the Shipping Corporation of India and Hindustan Shipyard, Visakhapatnam, for five cargo liners of 13,400 dwt each for a total value of over Rs 20 crores.

A fast 18 knot cargo liner propelled by an M.A.N. supercharged diesel engine of 13,596 dwt m.v. Jalamanagala was delivered to the Scindia Steam Navigation Co Ltd by the builders VEB Warnowwerft, Warnemunde, GDR, on March 26.

A new PL 480 agreement was signed on April 1 between India and the US for the supply of 1.57 million tonnes of wheat, 250,000 bales of cotton and 75,000 tonnes of vegetable oil valued at \$150 million (Rs 112.5 crores).

An agreement was signed by India with the Soviet Union in New Delhi on April 5 for the import of one lakh bales

of cotton which would be converted into textiles and re-exported to the Soviet Union.

The Reserve Bank of India modified with effect from April 1 the procedures governing levy of commitment charge by scheduled commercial banks in respect of unutilised portions of credit limits. The modified procedure allows banks to permit borrowers to indicate their maximum requirements on a monthly basis instead of on a quarterly basis. No commitment charges will be levied by the banks if the average monthly or quarterly utilisation does not fall short of 95 per cent of the maximum monthly or quarterly requirements indicated by borrowers.

The Bombay High Court stayed on April 2 an order of the City Civil Court invalidating the election of Mr. L. C. Kapadia and Mr. N. C. Kapadia to the Board of National Rayon Corporation. The High Court while admitting an appeal against the City Civil Court order allowed Kapadia to continue to act as directors of NRC.

The Japan-Arabian and Persian Gulf-Japan Conference has deferred its proposed freight hike on India's exports. The Conference which originally notified an increase of 15 per cent effective from April 1 has decided to reduce it to 12.5 per cent effective from June 1.

The Spanish Bank rate was reduced from 6.25 per cent to 6 per cent on April 3.

The Dutch Bank rate was cut on April 2 from 6 per cent to 5.5 per cent.

The Italian Bank rate was cut from 5.5 per cent to 5 per cent with effect from April 5.

The Argentine peso was devalued on April 5 by 1 per cent as a "crawling peg adjustment" to keep it in line with other currencies.

In Parliament

The Lok Sabha adjourned *sine die* on April 2.

The Minister for Industrial Development, Mr. Moinul Haq Choudhury, clarified

on April 5 in the Rajya Sabha that he did not propose to make any changes in the industrial licensing policy.

The Rajya Sabha adjourned *sine die* on April 7.

Money unchanged

Conditions were tight in the short-term money market as of Tuesday. Demand for funds was maintained and interest rates closed firm. In the inter-bank call section, both renewals and fresh money were reported at 10 per cent. In the Calcutta market also the rate ruled at 10 per cent.

Price index down

During the week ended March 20, 1971, the Index Number of Wholesale Prices showed a seasonal decline of 0.8 per cent. However, at this level, the price index was 2.7 per cent higher than its level a year ago.

PEOPLE

MR. B. N. Adarkar, Custodian of Central Bank of India, has been elected Chairman of the Indian Banks Association for 1971. Mr. M. G. Parikh, Custodian of Bank of Baroda, and Mr. K. P. J. Prabhu, Custodian of Canara Bank, have been elected Deputy Chairmen. Mr. C. V. Joag, Custodian of Bank of Maharashtra, will be the Hon. Secretary.

Mr. Laldas Jamnadas and Mr. Rasiklal Maneklal have been elected President and Vice-President, respectively, of the Bombay Stock Exchange.

Mr. N. A. Palkhivala has been elected President of the Income-tax Appellate Tribunal Bar Association for 1971-72. Mr. S. P. Mehta and Dr. R. C. Cooper have been elected Vice-Presidents.

Rear Admiral B. A. Samson (Retd) and Mr. Bharat G. Doshi have been elected Chairman and Deputy Chairman respectively of the Indian Engineering Association (Western Region) for 1971-72.

Mr. A. Ramaswamy Mudaliar has been elected President of the newly-formed Association of Shipping Interests in Calcutta.

50 years ago

According to Mr. Austen Chamberlain, in a memorandum presented by the Board of Inland Revenue to the Committee on War Wealth, the national possessions increased by £4,000,000,000 between 1914 and 1919. This practically approximates to half of the war debt. The Board of Revenue is of opinion that a great part of this new wealth can be got from the individuals who possess it; but the Board does not underrate the difficulties of the process. It is suggested that the most stringent penalties are necessary against invasion. It is also stated that the levy on fortunes must be limited to above £5,000, legitimate savings made in the five years of the war being exempt. It has also been suggested that a national contribution of gold ornaments should be asked for, and that failing a ready response from the

possessors, a levy should be made. The House of Commons recently considered this matter on a question raised by Viscount Curzon; but Mr. Chamberlain said he had come to the conclusion that the disadvantages attached to the proposal would outweigh any possible benefit that could be expected although the serious financial position would seem to authorise the advisability of a levy upon plate, trinkets and other articles made of gold and silver, with a view to restoring credit by the redemption either by voluntary subscriptions or by a forced levy. This method of raising the wind, the proposed introduction of which discloses the gravity of the situation, would be impossible in India, although the hoarded wealth in this country is incredible and probably transcends the British wealth tenfold.

COMMERCE

April 8, 1921

THE TWA HOSTESS

Personality/Attitude:

Distinctly and charmingly individual. However, all TWA hostesses possess one desirable quality in common: A desire to make you so comfortable and so happy, you'll be very glad you flew TWA.

The Brain:

5 weeks of intensive training enables brain to immediately transmit raw data of passenger's wishes into actuality.

The Heart:

Abnormally large. Often overrules brain's direction thereby increasing passenger's pleasure.

The Eyes:

Bright and clear with lively twinkle. Able to ferret out uncomfortable passenger immediately. Somber look then appears. Only when hostess makes passenger happy will eyes twinkle again.

The Smile:

Warm and spontaneous. Complimentary remarks by passenger result in more brilliant smiles, though accompanied by flushed cheeks.

The Arms:

Primary function: support the duties of the hands. Should be strong enough to drape blankets and coats over.

The Hands:

To bring your stereo ear phones.
To place pillow gently behind your head.
To serve you Eastern or Western cuisine.
To soothe your fevered brow.

The Legs:

Supportive of the entire structure. Designed to flash quickly up and down, aisle obeying passenger's wishes.

The Feet:

Dainty yet fleet. Works closely with legs. You can test the feet's stamina by asking hostess for that extra something. (Not recommended on non-stop round the world flights.)

TWA. WORLD'S LARGEST AIRLINE SERVING ASIA.

Offices in Bombay • Calcutta • Delhi • Madras • Ahmedabad

Based on average passenger miles in the free world.

AICC (R) SESSION

A firm attitude on East Bengal?

NEW DELHI

AS expected the grim developments in East Bengal cast their shadow over the two-day AICC (R) session in New Delhi last week-end. The lack of interest of the members of the AICC in the first day's proceedings, which were confined to domestic and party matters, was primarily because they were exercised over the terrible happenings in East Bengal. This became evident the following day when the resolution on the situation in East Bengal, moved by Mr Swaran Singh, gave them an opportunity to voice their heart-felt pain and indignation over the brutal killing of the people of East Bengal by Pakistan's armed forces. The debate on this matter was marked by highly emotional speeches, the recurring refrain of which was that the Government should not delay any longer the recognition of Bangla Desh as a sovereign State. Thus the session which began on a subdued note became emotionally surcharged towards the end.

Though the resolution adopted on East Bengal was the same as that passed by Parliament a few days earlier, it acquired a telling aspect because of the absence of the cautious note that is generally associated with Mr Swaran Singh's speeches on international problems and the effective prologue of the Prime Minister to the debate on the resolution. Both counselled patience so far as recognition of Bangla Desh was concerned pointing out that the timing of such action was crucial not only to India but the people of Bangla Desh also. Mr Swaran Singh said the matter was before the Government but for every action there was an appropriate time. He added that by hastening the pace the main purpose of such action would be defeated. Mrs Gandhi, who spoke after the resolution on East Bengal had been adopted, said more or less the same thing on the question of recognition but went a step further than in Parliament when she declared that "it would be neither proper nor possible" for India to keep quiet about the happenings in East Bengal. She dismissed the charge of interference in the internal affairs of Pakistan and justified India's interest in East Bengal developments because of their impact on this country and her desire to help the people there as both Hindus and Muslims were the sufferers.

Apparently Mrs Gandhi had been encouraged to take this firm stand by some success that has attended India's efforts to mobilise world opinion against the atrocities perpetrated by the Pakistani military regime against the people of East Bengal. The strongly-worded appeal of the Soviet President, Mr Podgorny, to President Yahya Khan to stop the bloodshed and persecution of the people of East Bengal and seek a political settlement of the problem is a significant and timely gesture in that it may induce other major powers to

take a less legalistic view of the developments in East Bengal. If that happens, the scale of brutalities that are being perpetrated by the military junta in East Bengal might be reduced and India thereby would have rendered some service to the people there.

As stated earlier, the other resolutions evoked little interest among the members of the AICC. After a day-long debate on the first day three resolutions were adopted—one on pledge to the people, the other on tasks before the party and the third on Harijan welfare. Normally the AICC used to adopt some specific economic and political resolutions but it made a departure this time because, as Mr Y. B. Chavan, who moved the resolution on pledge to the people put it, the Congress party manifesto which had been supported by a large majority of people constituted its political and economic resolution. It assured the people that the Government at the Centre and in the States would carry out various legislative, administrative and constitutional measures for implementing the programmes set out in the manifesto. The word "constitutional" was incorporated in the resolution through an amendment by Mr Mohan Daria in response to the demand from several members that constitutional amendments should be made without delay to remove the obstacles in the way of removing

poverty and reducing disparities in wealth and income.

The debate on the resolution revealed that delegates were not inclined to criticise the leadership or find fault with the Government. The dominant theme of all speeches was that a heavy responsibility had been cast on the party and any complacency would be harmful. The people who have given the party a popular mandate expected quick results and their hopes and expectations must be fulfilled. Therefore positive action had to come. The resolution on tasks before the party, moved by Mr Jagjivan Ram, authorised the new Congress (R) President, Mr D. Sanjeeviah, to set up a committee to bring about necessary changes in the party constitution to make the organisation an effective instrument for the fulfilment of the aspiration of the people. It laid down a six-point programme to tone up the party machinery at all levels.

The resolution, among other things, called upon the district congress committees to organise rallies of the party workers and supporters in every constituency. Further, a month-long congress membership enrolment campaign is to be launched by every DCC to mobilise those elements who had come nearer to the party during the elections. Congressmen have been asked to ensure that allocations for programmes of social transformation are properly utilised. The third resolution on Harijan welfare resolved that 1972 should be declared as the removal of social disabilities year and a country-wide programme should be undertaken to remove the evil of untouchability. □

WEST BENGAL

New Ministry's fight against lawlessness

CALCUTTA.

AS was expected, the Democratic Coalition Ministry in West Bengal has given the first priority to the law and order problem. After taking office, the Chief Minister, Mr Ajoy Mukherjee, lost little time in holding consultations with his Cabinet colleagues and later with the administrative and police chiefs on how to tackle lawlessness the quickest way. The Chief Minister has issued instructions to the police to deal with rowdies and miscreants with utmost ruthlessness. Since the mid-term elections, and particularly since the assumption of office by the new Ministry, one can see the return of confidence among people and the streets even late in the evening look more crowded. Some cinema houses have resumed late shows also. This is remarkable considering the fact that violence is still taking odd toll of some lives including policemen everyday. The latest incident involves a High Court judge who was shot at but escaped death. Rooting out lawlessness, political or criminal, will prove a most challenging task for the Ministry but this task the Ministry has to tackle with all the means at its command.

The business circles who are keenly watching the developments are, however, inclined to take a little more optimistic view. The backing of the strong Central Government for the West Bengal Ministry is rated as one of the encouraging factors. Other encouraging factors include the announcement of the constitution of the Industrial Reconstruction Corporation with headquarters in Calcutta which is going to concentrate on West Bengal's major industries like jute, cotton and engineering. Altogether 400 units remain closed till this day. The engineering units revival committee has already gone into the cases of a substantial number and has suggested concrete remedies for reopening the closed units. The Industrial Reconstruction Corporation's operations will considerably facilitate the work of engineering units revival committee. Greater attention to Calcutta's development with more adequate financial provisions for undertaking the various schemes is taken as another hopeful pointer.

Moreover, the Democratic Coalition Ministry is holding the view that the full

economic recovery of the State is possible only with substantial private investment. Happenings across the border have prevented the Ministry from making any definite policy pronouncements. But the Commerce and Industry Ministry has reportedly prepared a scheme for initiating measures to promote the recovery. The Ministry's scheme has already been circulated among Ministers of the Ministries concerned. Soon the Cabinet is expected to come to grips with the problems and announce specific measures for fighting the pressing problems such as the educated unemployment, rising prices and urban housing.

A thought is being given simultaneously to rural problems such as complete abolition of land revenue and speedier land reforms. The idea of the Minister concerned is to take to Punjab model and do away with land revenue altogether but at the same time raise the agricultural income-tax suitably. This should prove easy but the Ministry is likely to run into difficulties on labour policy. The members of the Communist Party of India who support the Government from outside insist that the police should not be used to curb the legitimate trade union movements. Against the background of lawlessness it will be difficult to separate trade union movements from the law and order question altogether. The Ministry will have to think hard to produce a set of guidelines for the police force without, at the same time, offending the Communist partners who obviously hold the balance. □

PUNJAB

Joint sector is the answer

CHANDIGARH.

JUDGED by the contribution of industry and mining to the per capita income and the workers engaged in registered factories, Punjab is an industrially backward State. It looks as if the Government of India has not considered the State suitable for the location of large-scale public sector industrial units. Of the Rs 3,400 crore worth units established by the Centre in various States till the end of 1969, Punjab had only a Rs 32-crore fertiliser factory. The State provides excellent opportunities for the growth of large-scale industries. Its fine road and transport systems, availability of skilled labour and an expanding market for consumer goods invest it with great potentialities.

In view of this situation, the Punjab Industrial Development Corporation has launched more than 2 dozen projects involving a total capital outlay of Rs 75 crores. Most of the projects are in the joint sector—in collaboration with the private sector—and the Corporation will contribute only 10 per cent of the capital. On completion, these industrial units will have an annual production capacity of Rs 300 crores which will give Rs 18 crores a year as sales-tax alone to the State exchequer.

Three industrial units—an export-oriented footwear factory, a tannery and a plant for pre-stressed concrete poles—have already gone into production. The footwear factory, in the first six months,

has exported 20,000 pairs of shoes and supplied 8,000 pairs to the Punjab and Haryana Home Guards. The pole plant is producing 100 poles a day and is to supply 60,000 poles to the Punjab Electricity Board by June.

The Corporation is finalising its plans to manufacture Swaraj tractor—the first tractor with hundred per cent Indian technical know-how and components—developed by the Central Mechanical Engineering Research Institute, Durgapur. A technical team of the Institute is busy working here. The plant is being set up on the outskirts of Chandigarh at Mohali. The first phase will cost Rs 2.5 crores and will produce 3,600 tractors a year. The plant will, later, be expanded at a cost of Rs 2 crores to raise its annual production to 12,000 tractors.

Next door to Ludhiana, at Dhandari, work is in progress to house a large brewery in the joint sector. The Punjab Breweries Ltd was incorporated in April last year. Its authorised capital is Rs 1.25 crores. It will produce 50,000 hecto-litres of beer per year. It is scheduled to go into production in August next year. Another project for which the blueprint is ready is

a glass-bottle plant to be established at Ludhiana to manufacture 12,000 tonnes of glass-bottle a year.

A letter of intent has been issued to the Corporation to set up a factory to manufacture three-lakh tyres and tubes for all types of vehicles. The Corporation has sought foreign know-how for it. A Rs 1.20 crore cottonseed processing plant is fast coming up at Gidderbaha in Ferozepur district. It is scheduled to be completed by March 1972. The plant will have a daily processing capacity of 100 tonnes of cottonseed. The products—lint, oil and deoiled cake—have a ready market. But the most ambitious project of the Corporation is the Rs 12-crore polyester staple fibre plant, which will have an annual capacity to produce 6,100 tonnes of this fibre. It will be in the joint sector and the Corporation is looking for suitable collaborators, both for finances and technical know-how. The Corporation's blueprint for a Rs 43-crore fertiliser plant is also ready. The plan is to produce three-lakh tonnes of urea from low sulphur heavy stock (LSHS)—a surplus product easily available in ample quantities from refineries. □

You can ensure Bumper crops —Bigger profits with Agricultural Chemicals from NOCIL

Protect your crops with

ENDREX*, ALDREX*, NEMAGON*,

BLADEX*, DIELDREX*,

VAPONA*, AZODRIN*, BIRLANE* and GARDONA*.

These pesticides are strongly recommended by

BURMA

Emergence of planned economy

RANGOON.

A SOCIALIST economy without planning is something of a rarity, but it is exactly what Burma has had these last nine years. The Revolutionary Government, which launched the country on the road to "Burmese" socialism in 1962, has done everything to socialise the economy, but little to put the socialised economy on a properly planned basis. All through these years, the Government has contented itself with carrying out with varying de-

grees of success (or failure) the *ad hoc* economic programmes of its various departments and agencies.

The consequences of this plan-less socialism have been most unhappy. The absence of clearly defined objectives, priorities and production targets has led to faulty allocation of scarce resources, and to general apathy and inefficiency of labour and management. By 1969-70, the economy had come to suffer from the worst trade deficit, the lowest foreign exchange reserves and

the highest currency in circulation since 1961-62.

But now the economy is going to be managed according to plan. The Burma Socialist Programme Party of General Ne Win has recently released a document entitled "Guide to Economic Planning", giving guidelines for a 20-year long-term economic Plan starting from 1971-72. This Plan, according to the Guide, is to be split into five four-year short-term Plans, the first covering the period 1971-72 to 1974-75. First priority is to be given to expansion of production in the agricultural, animal and fish breeding, and forestry sectors in order to be able to export more of the products of these sectors. Second priority is to be given to the establishment of industries based on these three sectors for the production of import-substituting consumer-goods. The third priority will be mining of minerals for setting up heavy industries in the future.

The Guide also lays down production targets for different sectors of the economy for the first Four-year Plan. The GNP is to increase by 19 per cent, and the *per capita* income and consumption by 8 per cent and 9 per cent, respectively, by 1974-75, taking 1970-71 as the base year. Sector-wise targets are: 16 per cent increase in agriculture, 40 per cent in meat and fish, 11 per cent in teak, 52 per cent in oil, 36 per cent in minerals and 20 per cent in industrial production. No specific targets are fixed for power, construction, transport and trade sectors, but a general indication is given of what should be done to improve efficiency, avoid wastage, suppress corruption, and increase production.

An interesting part of the Guide is the delimitation of the sphere of private enterprise. State organisations and co-operatives are the main agencies for carrying out the economic Plans, but private enterprise will be permitted to a limited extent in the fields of agriculture, animal husbandry, petty industries, transport, housing and the retail trade. It will not be allowed in the fishing industry, mining, chemical industries, power production, financing and credit, foreign trade and wholesale distribution.

The Guide, evidently, is not the Plan, but pending the formulation of a detailed national economic plan, presumably by or under the aegis of the newly reconstituted BSP Party Economic Planning Committee headed by General Ne Win himself, it will serve as the basis for all economic measures to be taken by the Government in the coming years. The targets it has set may or may not be achieved, for even the best laid plans of most advanced countries often go awry. But in having these targets, the country will have something meaningful to work for, and the Government a standard by which to assess the efficiency of State and co-operative enterprises and to re-examine the wisdom or validity of its cherished socialist policies. □

ZENITH INDUSTRIAL KNIVES

Made to the most exacting specifications

Name your cutting job. And get a Zenith Knife exactly to suit it. Zenith Knives meet the most rigid specifications. They are made of high-grade tool steel, scientifically heat-treated for tough edge-holding properties. Each knife is ground to close tolerances. A perfect finish and perfect parallelism ensure clean, burr-free cuts.

Get the best for your industry. Get Zenith Knives. For the toughest cutting jobs.

SINO-JAPANESE TIES

Using lever of trade
for recognition

TOKYO.

AS the semi-official Japanese trade delegation returned home after a gruelling fortnight of tough bargaining, it became once more clear that Peking would use trade as a lever to put pressure on the Sato Government not to separate trade from diplomacy. The delegation had to accept more and harsher conditions for Sino-Japanese trade and put its signature to a communique denouncing its own Government in much stronger terms than last April's communique which took six weeks to finalise.

The delegation was led this time by the President of Japan's internal Nippon airlines, Mr Kaheita Okazaki, and included a leading member of Mr Sato's ruling Liberal Democratic Party, Mr Yoshimi Furui, who headed last year's delegation. To strengthen the mission's hands and lend it greater credibility in Peking, the Japanese sent Mr Aichihiro Fujiyama, a former Foreign Minister, and a strong advocate of diplomatic ties with China, to Peking with the delegation. The Trade agreement does not generate much trade by itself. Last year out of the record figure of Sino-Japanese trade of US \$620 million, the trade under the agreement was only \$69 million. The same figure would be kept this year. But without its framework, the Chinese perhaps would not permit any trade at all.

Some Japanese and western observers say China needs Japan more than Japan needs her. This is true to a considerable extent in the sense that Japanese prices, delivery dates and physical proximity are advantages not enjoyed by other suppliers from Europe (mainly Western Europe). Japan also lifts sizable quantities of China's agricultural commodities, although trade remains heavily balanced in Tokyo's favour. This, however, is only a part of the story. The shrewd Japanese businessmen are aware of the immense potentialities of the market next door of 700 million people and would not want their position to be undermined by the increasing number of rivals such as Canada and West European nations which have diplomatic ties with China.

It is because of this realisation that some steel manufacturers and several other Japanese firms are cutting their Taiwan and South Korean connections to maintain their acceptance in Peking. Pressure at the popular and political level is growing in Japan for diplomatic ties with China. Last month a national congress was set up in Tokyo to work for the recognition of Peking. This comes after the formation of a League of Japanese Dietmen for the same purpose last year, with the support of a majority of Japanese parliamentarians. No wonder, Mr Sato spoke early this year of the "People's Republic of China" instead of using the usual name "Communist China" or "Mainland China". He even expressed readiness to have US-style diplomatic talks in a neutral capital, which China has turned down. The Japanese envoys have been told to be more

than usually polite and courteous to their Chinese counter-parts. Foreign Minister Aichi has even said that he would be prepared to go to Peking if this could help improve relations.

China is not falling for any of such concessions. In the latest communique signed in Peking with the trade agreement team, the Peking authorities have extracted a high price. In addition to the previously enforced condition that there would be no trade with the Japanese firms having large investments in Taiwan and South Korea, three new conditions have been imposed. (1) No trade with firms helping the Chiang-Kai Shek Government in Taiwan to stage a comeback to the mainland, or helping the South Korean Government to "intrude" into North Korea; (2) no truck with firms supplying arms and ammunition to the Americans for the war in Indo-China and (3) with US-Japanese joint enterprises and subsidiaries of American companies in Japan. The conditions are apart from the reiteration of the three poli-

tical principles that Japan should not carry on a two-China policy, should not obstruct normalisation of relations with China and not pursue a hostile policy towards Peking. The Okazaki delegation also supported China's stand that the Senkaku islands in East China sea are Chinese, and Japan's plans to exploit the resources of the shallow seas, off the islands, are an encroachment on China's sovereignty.

The hopes of those American firms which were planning to trade with China, after the Nixon administration relaxed the trade embargo permitting trade through third countries, have thus been dashed. The result of the new conditions imposed by China would be to strengthen those forces in Japan which are endeavouring to bring about diplomatic ties with Peking by applying economic pressure. The Sato Government will, however, not be easily persuaded to amend its policy so radically as to recognise China in the near future. How it can avoid this for a long time to come is difficult to see. □

The inheritors

...or the betrayed?

A shadow darkens the future of over 60% of India's children—yet not many people even know its name: protein malnutrition.

What it means

Protein is the element in food that builds both body and mind. If children between 6 months and 5 years do not get enough protein they become physically stunted. Worse, their mental development may be affected. And protein later on cannot repair this damage. It lasts a lifetime.

What it forebodes

- Economic ills—Adults below par, prone to illness, mean low productivity, wasted manhours.
- Population problems—Malnutrition is the major single cause of infant deaths. High infant mortality encourages larger families.
- Social injustice—When over two-thirds of the younger

generation could be handicapped by malnutrition, how can we talk of equal opportunity for all?

Help.

Malnutrition is a hidden famine...and so more dangerous. We must fight it on all fronts.

DEVELOPMENT PLANNERS must recognise that nutrition is an important pre-requisite to socio-economic development.

PRIVATE INDUSTRY must fulfil its social responsibility—low-cost nutritious foods are urgently needed.

- GOVERNMENT, BOTH CENTRAL AND LOCAL, must
 - *initiate developmental research
 - *rationalise distribution of scarce protein foods
 - *encourage the food industry with rational laws and licensing policies
 - *organise mass-scale relief programmes
 - *extend fortification of basic foods
 - *use mass communication for nutrition education

Inserted in the public interest by the Protein Foods Association of India

BUSINESS REPORT

From Our Own Correspondents

INDIA-UAR TRADE

Crude oil holds the key

CAIRO.

MUCH to the discomfort of both India and the UAR, the rupee trade plan between the two countries for July 1970 to June 1971 has run into unexpected difficulties. The situation promises to improve in the remaining three months of the annual trade plan period, but during the course of the year certain issues have been thrown up which need to be tackled in order that the future course of the two-way trade on rupee account basis runs smoothly. Basically the issues are related to the mechanics of rupee trade and they have their own significance in the wider context of similar arrangements that India has with the socialist countries.

India's exports to the UAR have been steadily growing and from Rs 21.50 crores in 1967-68 they rose to Rs 34.63 crores in 1969-70. Her imports from the UAR have shown some wide fluctuations and the figures for the corresponding three years were Rs 26.90 crores, Rs 41.41 crores and Rs 23.76 crores. The 1970-71 trade plan provides for exports of Rs 40 crores to Rs 43.5 crores against imports of Rs 37 crores to Rs 39 crores. This itself means an in-built imbalance of about Rs 3 crores though the rupee trade generally proceeds on the basis of a balanced account at the end of the year. The trade plan does not stop at giving the overall figure for imports and exports, but it also goes on to fix individual targets for India's exports which mainly consist of jute products, tea, spices, steel and engineering goods and imports which consist almost wholly of Egyptian cotton, rock phosphate and rice. The current difficulties have arisen partly because India's exports have moved faster than imports and perhaps more because in the field of engineering goods contracts entered into by Egyptian importers have been of a much higher order than the targets laid down in the trade plan.

The mechanism of the rupee trade provides for the creation of a rupee account in the name of the Central Bank of the UAR, the management of which is with the State Bank of India. In this account flow the resources generated by imports of Egyptian goods and it is also backed up by technical credit from the Government of India which is used to finance Indian exporters whenever there is an overdraft on this account. But it is not an unlimited nor revolving credit. New Delhi has fixed a certain amount beyond which the State Bank cannot turn to this technical credit for helping the exporters.

The account operates smoothly so long as there is a continuous flow of imports and exports. But this year, unfortunately, imports of cotton were hampered because of the dispute between the Cotton Corporation of India and private importers that delayed the issuance of import licences by nearly six weeks to two months. The re-

sult was that cotton arrivals had not begun till March while exports had been moving continuously. The State Bank apparently found it difficult to help exporters since no assistance was forthcoming from the technical credit and many of the exporters, particularly of engineering goods, found they could not ship their goods. Such companies as Kirloskars and Larsen and Toubro had their goods held up after they were packed and ready to be shipped.

There was the other issue involved in the exports of engineering goods. It was not merely the shortage of resources in the rupee account that had held them up. The contracts entered into, as pointed out earlier, were far in excess of the targets laid down in the trade plan. Apparently, this situation arose because of developments unanticipated by the Egyptian importers. In the past, their experience had been that the actual imports during the course of the year were less than contracted for, but this year they found that everything they said they wanted to purchase was forthcoming. In the reverse direction, exports of Egyptian cotton were hampered both because of the delay in the issuance of import licences by New Delhi and because of the shipping difficulties in Egyptian ports.

Perhaps, there would not have been this bottleneck if the UAR had agreed to pay in free foreign exchange for the goods to be imported in excess of individual targets laid down, as the Government of India believes should be the case. Its argument is that in the case of imports, for instance, such as of cotton, it exercises a discipline and the same could be done by the UAR in regard to its imports. Whatever the validity of this argument, the UAR is certainly not in a mood to pay in foreign exchange for what she can obtain under rupee trade and apparently she believes that it is for the Indian Government to exercise a control on its exports. This would be a tough task for New Delhi since exporters of engineering goods number many. But it should be possible for Indian exporters at least to exercise a discipline as far as prices are concerned and avoid a cut-throat competition. In Cairo, this correspondent was told of even such firms as Kirloskars and Mahindras entering into a competition between themselves, which perplexed even the Egyptians.

New Delhi apparently does not want to be strict in regard to enforcing export targets for individual engineering goods. This can be appreciated since, in the long run, it would be profitable for India to establish a foothold for as many items as possible in the Egyptian market. But if exports are to increase, imports will have also to expand since the rupee trade has to be balanced. That, however, means that the UAR must be in a position to diversify her exports to India. In the trade plan

the UAR did indicate that she was keen on exporting refrigerators, air-conditioners, bicycles, scooters, sewing machines, liquid petroleum gas appliances, special grades of textiles, television sets, metallic furniture and crude oil. None of these items except crude oil interests India at present.

In fact, if India can get crude oil from Egypt that is suitable for processing in the existing refineries, it would be a welcome development, particularly if this is available at a price lower than what India is paying for the current imports. Actually, the Indian Oil Corporation has obtained samples of El Morgan crude for studying the possibility of processing it at Indian refineries, but the conclusion is not yet known. As it is, because of the agreements with the private foreign refineries and other agreements for the supply of crude to Cochin and Madras refineries, which are to run for some time, the possibility of using this crude, provided it is suitable, is limited to one or two refineries. But this would mean either the expansion of the Gujarat refinery or making arrangements for transport of crude to Barauni, where there is an idle capacity of one million tonnes, from Calcutta. Whether the question has been examined from all these aspects is not yet known.

The Government of India is apparently willing to strike a deal on crude oil. If this can be done, New Delhi may be even willing to advance a credit of Rs 25 crores to Rs 30 crores to the UAR in return for the latter's agreeing to supply crude at a price which would be lower than, say, Saudi Arabian or Iranian crude. Such credit could also help in getting over the difficulties into which the trade plan has just run. The question is whether the UAR would be inclined to ask for such a credit and also supply crude at a lower price than what the OPEC members demand.

The UAR has its own ambitions in developing her oil industry and over the next five years she does hope to produce over 40 million tons of crude, for the transport of which a pipe line is being planned. International companies will be involved in the development of this pipe line and its use. Once that involvement is deep, they are sure to bring pressure on the UAR to ensure that India does not get cheaper crude. This is why it is necessary that India and the UAR should move quickly if an oil deal is to be reached. □

INSURANCE

A 26 per cent rise in LIC's business

BOMBAY.

THE Life Insurance Corporation has done indeed remarkably well during 1970-71. Its total new business has been of the order of Rs 1,303 crores as against Rs 1,036 crores in 1969-70. In other words, the increase in the business has been of the order of 25.8 per cent over the preced-

ing year compared to the annual variation of minus 3.4 per cent to plus 13.8 per cent during the past five years. In terms of policies there was an increase of 2.21 lakhs over the 1969-70 figure of 14.01 lakhs.

With this higher business has gone higher investment by the LIC in its socio-economic role. Its total investments for 1970-71 exceeded Rs 268 crores, an increase of over Rs 40 crores over the preceding year. The Corporation's contributions to the Central and State government loans were of the order of Rs 86 crores and Rs 41.5 crores respectively, an aggregate increase of Rs 33.5 crores over the previous year. Disbursal of loans to municipalities and zilla parishads for water supply and sewage schemes were almost doubled from Rs 5.5 crores to nearly Rs 11 crores and for the first time the LIC also advanced loans to zilla parishads for the rural water supply schemes. The State electricity boards received as much as Rs 48 crores as against Rs 32.50 crores during 1969-70, in addition to the investment of Rs 20 crores in the bonds of the State electricity boards which was maintained at the same level during the year. Advances for housing loans amounted to over Rs 33.5 crores excluding the loans given under mortgage schemes like the "Own Your Home" which, when taken into account, would bring this total to over Rs 40 crores. Together with the loan commitments made to Housing and Urban Development Finance Corporation, the State housing boards, the apex co-operative housing societies and other agencies, the LIC's contribution to housing during 1970-71 would be about Rs 75 crores.

The Chairman of the Corporation, Mr T. A. Pai, is undoubtedly happy with the performance during the year but he believes his organisation could do still better. For instance, the rural offices were bringing in more business but the increase in business in what may be termed as "green areas" was not proportionately higher than in those parts where the green revolution had not made such an impact. It is these green areas which will be taken up for "intensive development" by the Corporation during the current year and the divisions concerned are being re-organised for the purpose. What is particularly comforting to Mr Pai is that the 1970-71 increase in business of Rs 267 crores has come mainly because of the higher productivity shown by the staff. He is hopeful that last year's results would show that the expense ratio was even lower than the maximum permitted statutorily, which would mean a reversal of the trend witnessed in the earlier years.

The growing business, of course, means more resources at the disposal of the LIC. Even today over Rs 300 crores of the LIC's funds pass through the banking system, and this amount would increase as the LIC steps up its activities. Mr Pai is therefore keen that there should be a better management of the LIC's funds. At a Press conference he emphasised that this aspect should be taken into account in understanding the LIC's position in the controversy that has developed with its entry into the call money market. True, in the past LIC's liquid funds were deposited in current accounts in the banking system without getting any return, but there is no reason why the banking system should

Paper famine

MR Harish Mahindra, President, Indian Merchants' Chamber, says that the current "paper famine" stems from the Government's policy of not allowing the expansion of big manufacturing units under the plea of preventing concentration of economic power and growth of monopolies. It is certainly not in the best interest of the economy to pursue a policy of curbing productive activities in those areas where acute shortages of essential supplies are clearly notified. Quick increase in production in a capital-intensive industry like paper could be possible only if larger units are allowed to expand. A number of applications from the large-scale sector of the paper industry are pending before the Government for more than a year and the inordinate delay in taking decisions in this matter is one of the contributing factors to the present shortage. At the same time such activities of the paper industry as switching the production over to more remunerative varieties at the cost of writing and printing paper and the frequent price hikes without any corresponding improvement in the quality of the product malalign the image of the business community in the eyes of the consuming public.

Industrial licensing policy

Mr B. Mitter, President of the Associated Chamber of Commerce, says that the industrial licensing policy requires an overhaul because, being openly biased against large business houses, it acts as a constraint on the growth potential of the economy. By restricting the growth of larger industrial enterprises, it also limits their ability to compete successfully in international markets and to increase India's export earnings. The policy is thus self-defeating. Another fetter on the operation of industry is the Monopolies and Restrictive Trade Practices Act which bristles with "complexities and ambiguities". The prosperity of large-scale industry and of small-scale industry is one and indivisible and experience shows that small undertakings flourish most healthily when their larger counterparts are also doing well. According to Mr Mitter, small-scale industry is unlikely to develop in a vigorous way by merely being insulated behind special privileges or by the imposition of artificial restrictions on the manufacturing activity of others.

Industry's R & D problems

Rear Admiral B. A. Samson (Retd), Chairman, Indian Engineering Association (Western Region), says that an important objective of the R and D programme in Indian industry should be to improve the manufacturing efficiency of conventional goods. Their improvement does not depend much on new R and D but on good design and efficient manufacturing methods. Agricultural equipment and implements, simple tools, bicycle and automobiles are some such products where improvement in performance, reliability and low price rather greater novelty is required. An

BUSINESS OPINION

equally important problem is the need for an assurance to industrial undertakings that they would be allowed to exploit commercially the fruits of their research and development. Under our present industrial policy there is no such guarantee that the larger companies which have the men, money and equipment and can undertake a meaningful research would be allowed to enjoy the fruits of their labour.

Export prices

Mr K. Eswaran, Director of Easun Engineering, Madras, says that the present system of taking into account the premium value of incentive import licences for purposes of calculating export prices should be done away with. The f.o.b. prices should cover the overheads of production. According to Mr Eswaran, no incentive import licences should be sold or transferred except for the purposes of importing what is needed by the exporting units.

New projects in West Bengal

Mr R. P. Goenka, President, Indian Chamber of Commerce, Calcutta, says that the Union Government should take an early decision to locate some major projects in West Bengal such as a petrochemical complex, a shipbuilding yard and a free trade zone. Haldia, according to Mr Goenka, is ideally suited for such projects. During the President's rule in the State, difficulties of the industries were identified and it was time for effective implementation of policies based on these studies.

Coffee Board depots

The All-India Coffee Merchants' Association says that the opening of more and more depots for sale of coffee in India by the Coffee Board is deplorable as coffee is sold in these depots at prices 2.5 per cent lower than the open auction pool prices. According to the Association, this is a serious encroachment on the normal trade facilities as 80 per cent of the coffee is distributed by small traders. The opening of depots by the Coffee Board affects adversely the small trader.

Octroi abolition

The Indian Merchants' Chamber, Bombay, says that while the Chamber welcomes the suggestion for the abolition of octroi, the multi-point turnover tax scheme recommended by the study group appointed by the Maharashtra Government would cause heavy burden on the trade and industry. If the study team's recommendations on textile, sugar and tobacco are implemented, it would defeat the very object of imposing additional excise duty in lieu of sales tax. The proposed scheme of multi-point turnover tax would bring almost all commodities within its purview and would affect all dealers irrespective of the size of their turnover.

consider the LIC funds as part of its own resources. If the LIC had been offered by the banking system a return, say, of even $4\frac{1}{2}$ per cent on its standing accounts, the situation would have been different. But with no such scheme, it is essential that the LIC devise ways and means to earn some return on its liquid funds which in recent days were of the order of Rs. 25 crores at any time, apart from the money invested in the call money market. And Mr Pai had this question to ask: Why should it be called an inter-bank call money market when the banks themselves had no money to lend in this market? Of about Rs 22 crores lent in this market in the recent period over Rs 20 crores alone had come from the LIC and the Unit Trust. Further, if the LIC earned 11 per cent to 12 per cent on its lendings when the money market was extremely tight, it was not the case when it entered the market first. The Corporation then earned hardly 4 per cent on its lendings. He had also the argument

to advance that if the LIC had not lent its funds, some of the banks would have been forced to borrow money from the Reserve Bank at a very high penal rate.

There was the further point made by Mr Pai that there was no reason why the LIC funds should receive a different treatment than that accorded to other depositors. In a hurry the banking system took a decision not to pay any interest on the current account. But when it found that this would prove a handicap in mobilising resources in the rural areas, the depositors there were permitted to open savings bank accounts which had all the facilities of current accounts while bringing an interest of $3\frac{1}{2}$ per cent. In the urban areas, Mr Pai said, big current account holders were encouraged by banks to lend money in the call money market in order that they should earn some money (such investments have to be for a minimum of 15 days and earn $1\frac{1}{2}$ per cent). Then why not allow the LIC to get an adequate return on its own funds?

This was Mr Pai's reply to the State Bank Chairman, Mr R. K. Talwar, who had recently argued that on considerations of fairness and wider issues of investments, individuals and institutions should be put on an equal footing in the matter of return on surplus funds. His case was that funds offered in the call money market by the LIC and the UTI would in any case have been mostly with the banking system and the operation of these institutions in the inter-bank call money market did not improve the liquidity of the banking system. Basically, Mr Talwar's argument was that if the LIC or the UTI have to be ensured a higher return on the surplus funds, there is no reason why the individual depositor should not also be given a similar benefit. Such an incentive could help in drawing more funds in the banking system and improve its liquidity. □

SAVINGS

Insurance incentive for depositors

BOMBAY.

THE recent schemes proposed by some banks, the Unit Trust of India and the Life Insurance Corporation for covering life risk of savings banks depositors and unit holders aim at linking savings with insurance. They will have a double advantage of providing incentives to savers as well of spreading insurance consciousness.

Under its deposits-linked insurance scheme, the LIC offers insurance cover to all savings bank depositors between the age of 18 and 49 under a one-year renewable group term insurance plan. For depositors upto 40 years the sum assured will be twice the average amount of deposit during the calendar half-year concerned. The sum assured will be equal to the average amount of deposit for depositors between 41-49. The depositor will be eligible for insurance benefits if he maintains a minimum average balance of Rs 1,000 and the amount of cover will be a maximum of Rs 10,000 and Rs 5,000 in the two age groups respectively. The premium for the insurance cover will be at the rate of $1\frac{1}{2}$ per cent per annum and will be charged on the deposit balance on which interest is paid by banks.

The cost of insurance premium is to be borne by the depositor, but some banks are reported to have agreed to bear the full cost. Another bank is reported to have agreed to lower the minimum cover limit to Rs 500. These banks have rightly taken the view that the cost of insurance premia is within their usual rate structure. Although the interest rate on one year fixed deposits is, 6 per cent per annum, banks are paying only 4 per cent on monthly minimum balances in savings accounts. With the stipulation about the minimum amount requirement for insurance cover, the savings bank account balance becomes a virtual fixed deposit. It is encouraging to note that banks are taking a liberal view and promoting both savings and insurance.

There is a proposal to share profits between LIC and banks under this scheme. This gives yet another incentive to banks to bear the cost of the premia. But there is one factor which the banks must consider. The premia will be paid on the

deposits earning half-yearly savings interest if it is above the minimum limit of Rs 1,000 or Rs 500 as the case may be. But the insurance cover will lapse if the balance falls below the minimum required at the time the claim arises. Although some of it will come back to banks through profit sharing, a way should be worked out to ensure that lapses of this type are the minimum possible.

The unit-insurance linked is yet to be finalised. But LIC has proposed a cover up to Rs 12,000 to all unit holders up to the

age of 45, if they plan to invest in units in monthly investment of Rs 100 for 10 years. The plan will be under a Decreasing Temporary Assurance Policy. The premia will be paid by the Unit Trust under a master policy issued by the LIC to it for the first seven years. In case of premature death of the unit holder, the LIC will pay the balance of uninvested instalments. There is no medical examination but insurance cover in the initial period is restricted (as shown in the next column).

Duration since entry into scheme

<i>Duration since entry into scheme</i>	<i>Benefit on death</i>
Less than one year . . .	Refund of premium paid.
1-1½ years . . .	25 per cent of sum assured.
1½-2 years . . .	50 per cent of sum assured.
2 years and above . . .	Full amount.

These restrictions would not however apply in case of accidental death.

It is not clear who will bear the cost of premia, but it would be reasonable to expect the UTI to bear it in consideration of the 10-year regular savings agreement with the investor. □

Garibi hatao: How to go about it

By A Special Correspondent

REPORTS on serious academic discussions of current problems have a way of getting crowded out of our newspapers. Last month the country was in the grip of election fever. Also the discussions at the seminar on Income Distribution in India, organised by the Planning Unit of the Indian Statistical Institute at Delhi on February 25-26 were not open to the press. Even if this were not so, it is unlikely that its proceedings would have received adequate or authentic coverage.

There could be no denying, however, that two most relevant discussions on programmes and policies pointing to the way Mrs Gandhi can redeem her election pledges were held in Delhi last month. The first topic, discussed by the Planning Commission with economists, was unemployment; it came as a sequel to the Dantwala Committee's report on Unemployment Estimates. This second seminar set out to map the extent of poverty and to explore the ways of blunting its edge through some speedy and effective works programme, such as advocated by V. M. Dandekar and N. Rath in the *Economic and Political Weekly* (now republished by the journal as *Poverty in India* for Indian School of Political Economy, Poona, Rs 5).

In India the cry for socialism is loud and clear, but the demand for equality is neither widespread nor insistent. We are a caste-ridden, class-conscious people, happy in our unequal groupings and keen on preserving our status if not also the higher standards of living enjoyed by a minority. Yet the slogans on eradicating poverty have been accepted as their own by all the political parties. Perhaps the hope that Mrs Gandhi was more earnest and determined about a radical programme was uppermost in the minds of the millions who voted for her candidates. Our unemployment is the result of our widespread poverty. Lack of opportunities for increasing the incomes of the poor is a major impediment in ensuring a minimum level of living to all who now are condemned to eke out their existence below the poverty line. The ISI seminar took up both the levels of income and the welfare measures in its stride.

Empirical studies

Inaugurating the seminar, K. N. Raj touched first upon the problems of data on income distribution, consumption patterns and the spread and depth of poverty. There was need for many more empirical studies on the nature, extent and causes of poverty. At present we were content to live with so much folklore on saving, unemployment and penury. How do these behave over time? How far are the data reliable? How do we assess and interpret the data? If the all-India data were difficult to establish and to interpret, Raj said, it might be better to disaggregate—State-wise, soil-wise, on some basis of homogeneity. It would then be easier to analyse the factors behind the facts of poverty and unemployment. A study of the factors influencing income distribution was essential to any prescription of policy.

Without amplifying his preferences as between the various policy instruments, Raj led the discussions in a practical direction by referring to the three broad approaches to corrective programmes. One lies in the direction of a more rapid growth of output and income. Raj had his own reservations on the one-time high hopes about fast rates of growth to be achieved between 1960 and 1975. The second line of approach was through works programme—roads and other infrastructure, irrigation and soil conservation, afforestation and productive activities taken up as an integrated programme for areas where poverty and unemployment are acute. The third approach to the problem lay in examining the scope for land redistribution, in extending the area of public ownership and in increasing taxation of income and wealth as the common means of reducing income inequalities.

Basing his findings on the *per capita* private consumer expenditure, Dandekar suggested that over the past decade this expenditure had increased by half a per cent per annum. Even this small gain was not distributed equitably among all the sections of the population. The condition of the bottom 20 per cent rural poor has remained more or less stagnant and of the bottom 20 per cent of the urban poor has deteriorated. For another 20 per cent of the urban population, it again was stagnant. Placing the numbers of those below the minimum level of living in 1961 at more than one half the total population in that year, Bardhan pointed out how there has been a "significant rise" in the percentage of the people below the minimum level. According to Bardhan, these percentages for rural and urban population were 38 and 32 in 1960-61, 45 and 37 in 1964-65 and 54 and 41 per cent in 1968-69. At the end of 1960s, the absolute number of people below the poverty line was nearly 300 million.

On policies to redress inequalities of income and living standards, the seminar attracted no fewer than seven papers—from Raj Krishna, Sanyal (land redistribution), H. K. Paranjape (public investment for altering the pattern of inequalities) and Ashok Mitra (role of differential interest rates on bank credit to expand productive opportunities of the poor).

On land policy, one recommendation was tenancy reform and the other a better distribution of land holdings, since land is the primary means of production and a major source of livelihood for the majority of the population. Tenancy reform had been uneven over different parts of the country and in most States neither adequate nor effective. A more stringent policy on land ceilings was likely to run into serious difficulties. Dandekar's conclusions are:

(a) To provide a modest minimum size of holding (ranging from 0.5 acre to 3.5 acres according to conditions in different States) only to landless workers will call for drastic reduction in the existing level of ceiling in all States; (b) Such a lowering of ceilings will be necessary even if the objective of redistribution was just to raise the small holdings to a viable size; (c) In

practice, since claims of the landless cannot for political reasons be ignored, a drastic policy on ceiling would lead to a vast increase in uneconomic, non-viable holdings; (d) Many of the larger holdings consist of inferior land. Its development is more likely if left with large farmers who have greater resources for investment; (e) A lowering of ceilings will not in any case be acceptable politically, because "thanks to technological advances in agriculture made during the decade, owner-cultivation on sizable farms has become distinctly profitable. The entire course of future agricultural development now depends on this impetus". Dandekar concludes that lowering of ceilings cannot be a major instrument for alleviating rural poverty and suggests that the immediate object should be to enforce existing ceilings effectively.

The fleeting references that the economists made to differential interest rates and use of public ownership were a measure of their scant relevance to a more egalitarian income distribution. The smallness of the public sector limits its direct influence in bringing about a more egalitarian structure of wages and salaries. There was no impact whatever on the private sector of the public sector policy of providing housing and other amenities or of lowering the salaries of top executives. Paranjape's emphasis on indirect effects on the distribution of wealth and incomes and on the concentration of economic power were more pertinent.

Important ingredient

A vigorous, expanding and efficient public sector has been such an important ingredient of the strategy to achieve social justice within the framework of a mixed economy that it is worth recounting the projected role of the public sector. Instead of nationalising existing wealth, the Indian emphasis is on public ownership over a major part of new investments. This would, over a period of time, bring much of the capital stock within government's ownership and control. The share of privately-owned wealth will correspondingly decline. Inequalities in income, to the extent they are derived from wealth inequalities, will be reduced. The essential condition for this to happen is that publicly-owned wealth is used efficiently and generates large surpluses. Other incidental benefits of progressive public ownership include the possibility of direct command over an increasing proportion of investible surpluses and capital gains, control over key sectors which could be used to influence the rest of the economy and a reduced concentration of economic power.

Such at any rate is the theory. The public sector's share in national capital has certainly increased and increased appreciably. But whether this has led to any significant improvement in income inequalities is doubtful, mainly because of the low profits earned by public enterprises. The record is by no means uniformly bad. There are many enterprises earning decent profits. But taken as a whole, the rate of

return on public investment is well below what obtains in the private sector. This reflects poor utilisation of capacity in some areas. But it is also sometimes sought to be justified on the ground that public enterprises sell their products cheap and pay their employees well. Paranjape questioned their legitimacy. The issue, Paranjape pointed out, is not whether products are cheap or workers paid better but whether the benefits of these policies flow to those who deserve most. In many cases the benefits do not flow to the poor and the dispossessed, the most glaring example being irrigation projects. If the policies do not benefit the poor and the handicapped and result in a lower surplus, they mean slower growth which in turn makes the prospects for the poor more bleak.

To summarise the discussions at the first three sessions may not be as difficult as telling how many angels can stand on the head of a needle. But when the facts relating to income, its distribution and changes in *per capita* consumption expenditure over the past ten years are not clear, much could be—and was—said from all the sides. The National Sample Surveys are the basic source material. Their data naturally became the bed-rock of a debate. Dandekar and Bardhan drew their conclusions and these were rebutted with equal force by those who did not think that the numbers of those below the poverty line had gone up significantly and that the penury of those below the line had increased either in the cities or in the country-side.

The lay listener of the learned discussions found himself in the legendary predicament of the American President who was being advised by Keynesian, non-Keynesian and anti-Keynesian economists on how to pull the United States out of the great depression. The President is reported to have said to his friends that when the economists talked of prune-pumping and of increasing government expenditure in order to revive the economy, he felt they were right. But when others came and suggested that public outlay should be cut down, he could find no reasons to differ from them. What then most confused the American President (and now this lay listener) were the damned dots.

Among the causes of poverty and uneven distribution of incomes, ownership of wealth and especially of land was important. As for *per capita* consumption, the size of the family was a determining factor. An equally important factor was the number of days the landless labourers and others were employed, and their wage rates. Yet, it was a partial picture to see poverty only in the rural areas and among the landless. Many land-owning but large families and the urban classes contributed their fair share to the numbers of the poorest.

Works programme

Perhaps the most lively discussion at the ISI seminar on Income Distribution took place on the role of the works programme. There were economists like Mrs Dharma Kumar who pointed to the waste tolerated in the implementation of industrial programmes—the inability to keep within budgeted outlays and time schedules. She asked why the double standard of a more rigorous cost-benefit expectation

should be attracted by the rural works programme. Vaidyanathan was quick to say how unhelpful it is to compound one waste with another.

Even if employment was accepted as the overriding objective of planning, how does one give employment-orientation to the Fourth Plan? In what essential respects would such a plan have a different approach? The ultimate question is of what to produce, when, where, in what way and for whom? The existing bottlenecks and constraints cannot be wished away overnight. The different balances will have to be maintained.

In fact rural works can be made an integrated part of the development programme, since they consist of roads, school buildings, soil conservation, minor irrigation and so on. Is this effort to add to job opportunities in the relatively backward areas something alien to the thinking which goes into the formulation of our Plans? Do our planning procedures and mechanisms stand in need of any changes? What is at the heart of the difficulties which, it is assumed, prevent us from enlarging and extending labour-intensive programmes in the Plan?

Productive use

It was obvious that there was all the difference in the world between government's promise to give work in each district to about 1,000 able-bodied persons for some 300 days in a year at the cost of Rs 50 crores a year and the rural works programme outlined by the economists at the seminar. This was calculated to siphon off the surplus population and put it to productive use in a manner hard to distinguish from the labour camps dear to feudal or authoritarian regimes. One was a pre-election promise of a liberal democratic party and the other resembles a communal-like organisation for national development.

But to revert to the main theme and summarise Dandekar's propositions on the massive supplementary rural works plan: 1. The problem of under-employment is basically one of poverty and it is possible to measure both. Dandekar calculates that 40 per cent of the rural and 50 per cent of urban population are under-employed. His plan aims at providing full-time employment (300 days a year) at a daily wage rate of Rs 2.50 for an adult male and Rs 1.60 for a female labourer. 2. In order to raise the poor to the minimum standard of living, additional incomes of the order of Rs 800 crores need to be provided in the rural areas. Dandekar assumes that if the rural areas are taken care of, the urban problem will be solved. 3. These incomes can be provided through massive works programmes designed to utilise unskilled labour. They do not require scarce inputs, such as cement and steel. There is no dearth of projects ready to be taken up. "Long lists of such projects are lying in all block development offices". 4. The village-wise slack season-oriented works programme will not do. It is necessary to think in terms of full-time jobs. Planning should be on district or block basis. The aim is to convert as much as possible of the employment becoming available so that it can be regarded as secure and dependable. He rejects the departmental organisation of labour as well as labour co-

operatives and suggests that the system of labour contracts should be streamlined and used more extensively.

In the implementation of any such massive programme, the question of taxation is fundamental. There is no getting away from it. Unless we can effectively tax the rich, it is idle to talk of helping the poor. It is possible that the works programmes may after a few years result in a larger increase in agricultural production than contemplated. But in the transition, there is the real problem of finding extra supplies of food to meet the increased demand which would follow large-scale programmes of rural works. If inflation is to be avoided, we have either to import food or resort to procurement and rationing of necessities.

Raising the level of the poor, be it through doles or through works, means effectively taxing the rich. Dandekar's programme calls for a mobilisation of Rs 800 crores—1,000 crores a year, over and above what is implied in the Fourth Plan. Note that the much smaller effort called for by the Plan is not proving easy. How is a much bigger effort to be mounted? What type of taxes and on whom? Will the taxes on Fiat and Ambassador cars yield all that is needed? How do you ensure that the requirements of other investments and of incentives are met? It is easy to show that only a 10 per cent reduction in the richer group's consumption is needed. But how to bring it about when the top decile consists of clerks, industrial workers and middle farmers?

If we can find the will and the means to mobilise the necessary additional taxation, perhaps the mere lack of well-worked-out projects need not prevent us from using this approach, even inefficiently, for the benefit of the poor. But to do this indefinitely is not desirable or necessary. An additional taxation of Rs 800 crores over and above what is visualised in the Fourth Plan in effect means augmenting the total pool of savings. If the works programme cannot be financed by diverting resources from other schemes, additional resources will have to be mobilised. This requires sacrifices on the part of the rich.

Consumption cut

Dandekar calculates that the programme can be financed if the richest five per cent accept a 15 per cent cut and the second richest five per cent, a 7½ per cent cut in the consumption. On how exactly this is to be done, there is vagueness. In more concrete terms, it was estimated that such a rural works programme would call for a reduction in consumption of Rs 22.5 for a family of four persons spending Rs 300 a month and of Rs 75 for families with Rs 500 a month. Can economic reasoning and political lead combine to make our people ready for such sacrifices?

Also, there is the question of real resources. The problem arises from the very different consumption patterns of the rich and the poor. For instance, 35 per cent of the consumption of the richest 10 per cent consists of foodgrains while for the poor 20-40 per cent the portion is 60 per cent. Even if Rs 1,000 crores could be transferred to the

poor, we are left to live with the fact that the amount of foodgrains released by the rich is much less than what the poor will need. This situation cannot be managed except through rationing. Over time, there may be large surpluses of other things. If they can be exported, food can be imported. But this needs economic analysis.

Some economists have reservations on the quantification of under-employment in terms of poverty. Others have serious doubts about there being no dearth of projects. Which are the projects? Soil conservation, roads and minor irrigation? A substantial programme is already in the Fourth Plan. The scale of effort is much higher than in the past. R. M. Honavar and other economists feel that we are not yet geared to implement these rural works effectively. Even these simple works call for some amount of technical preparation and planning. To undertake big expansion of rural works without proper preparation can only mean wasteful use of resources and is little better than a pro-

gramme of doles. Maybe, we need to give doles. But let us not dress them up as works! If it is decided to expand the programmes manifold, we shall have to believe that well-worked out projects are available in plenty. And if projects are available and savings can be mobilised, why a supplementary works programme? Why not integrate it into the Plan?

To be productive and to provide employment in areas where poverty is most acute, rural works call for studies of the affected areas which are based on their potential. We have talked much of district and block planning but done little. There is still not enough appreciation of the technical nature of this work. It is in this context that the proposals outlined by B. S. Minhas became relevant. His emphasis is on integrated planning of development works in groups of villages by teams of experts. This planning is to become part of a policy of land consolidation. It is intended to prepare a comprehensive and integrated programme, with

concrete projects spelt out, which can be shown to be for the larger benefit of the community as a whole and not to serve the interests of the powerful few. Minhas also stresses the need for local participation, not just in organisation but in financing the programme. Without this contribution, we cannot ensure responsible participation of local communities in such a country-wide effort.

There were thus many reservations, on practical and theoretical grounds, about the rural works programmes. It was clear that the resources needed could not be obtained even with the steepest conceivable taxation on cars, cosmetics or cinema tickets. And the people in higher income brackets—not to speak of Ministers who live in rent-free bungalows located on 5-acre plots—will have to make greater sacrifices. Even if the funds were forthcoming, R. M. Honavar asked, where were the organisation and the managerial skills? There was little time to discuss a few more basic questions, such as Ashok Desai's on whether one should worry about income distribution when greater equality in consumption even through doles will end up in more uneven income distribution (since the poor will buy food and cloth produced by the rich and thus add to their profits). He therefore stressed the need for a better distribution not of incomes but of the means of earning livelihood.

Hard work

If we cannot manage efficiently our public sector industries and railways or implement the existing programmes for afforestation and for bridging the gap between irrigation potential and utilisation, what are the chances of making a success of the rural works programme? The answer seems to lie in the fact that economic development is a long, arduous and painful process which demands its price in hard work, discipline and co-operative effort which went beyond shouting slogans of equality and full employment. It remains to be seen if the new Government, no longer lacking the mandate, has the imagination and the will to call first of all upon the Ministers in the Union Cabinet to talk little, to travel less and to work harder so that each of their departments shows tangible results in a measurable period of time.

Talking of organisation, one could not praise too warmly the drive and thoughtfulness which went into the planning of the ISI seminar on Income Distribution. Helped by a few colleagues, T. N. Srinivasan got the ablest of the country's economists to write papers and give time for serious discussion. The amount of work put in by him and his co-operators has succeeded in collecting enough data and analysis as to make an excellent collection of learned papers and tracts for our time. And all this done within a matter of two months. While the seminar's volume of work is twice as much as that done by the Mahalanobis Committee on Income Distribution, the time and the expense cannot be even one hundredth. This shows what young, intelligent and determined persons can do. Economic Ministers in Mrs Gandhi's Government can do much worse than spend twice the time and the money in studying these papers and drawing the right conclusions in this trying moment of their victory. □

NEW HORIZONS ! NEW DIMENSIONS !!

FOR STARTING AN INDUSTRY

IT'S

MADHYA PRADESH

(the heart of India)

Come to Madhya Pradesh with an industrial project. You will find unprecedented facilities. M.P.'s central situation makes **TRANSPORT INVOICES THE LOWEST. PRODUCT TRAVELLING TIME HALVED.**

And a packet of very special incentives:

- * Unparalleled mineral and forest wealth.
- * Developed land at throw-away premium and annual rent.
- * Liberal financial assistance: Equity and Loans.
- * For power intensive industries, special concessional rates for power. Subsidy on merits for other industries.
- * Water at highly concessional rates.
- * For certain industries, Sales Tax subsidy upto 50%. For certain others, interest free loan equivalent to 50% of the sales tax.
- * In the case of new industries, total exemption from Octroi on plant and machinery and raw materials for certain items.
- * Reimbursement of project/feasibility study costs.

Problems and prospects

By K. M. D. Thackersey

THE clothing industry has made impressive progress in the matter of exports. Starting with just about Rs 16 lakhs in 1962, exports of clothing have now reached the impressive level of over Rs 10 crores, and this achievement is really remarkable. However, we have got to aim very much higher as our total exports of Rs 10 crores do not constitute even one per cent of the international trade in readymade garments.

The manufacture of standardised garments on a mass scale with power driven machines was unknown in India till the beginning of the last world war. During the war some garment factories were set up in the different parts of India to meet defence requirements. With the cessation of war, this industry took up the production of garments for the civilian consumption. From the small beginnings made during the last world war, it has now developed into a giant industry having over 1,200 units, small and large. It consumes around Rs 65 to 70 crores worth of fabrics of different fibres, and the total value of production exceeds Rs 100 crores. In the western countries, 60-80 per cent

of the fabric production goes into garment factories for the production of garments on a massive scale for domestic production and for exports. In India, the traditional wear being the dhoties and saris, the consumption of cloth by garment factories may not reach such high proportions. Yet the industry in India has so far been able to cater to a major part of the requirements of the urban population, leaving out the vast rural markets. Once the industry expands to cover these areas, I have no doubt that the production capacity will have to be increased. I am told that the main problem facing the industry is the marketing of the products in the rural parts of the country. By and large, I am certain that the industry will be able to work out the mechanics of operation in the backward areas of the country and that their production of garments will increase from the present level.

I am aware of the number of handicaps which come in the way of the clothing industry doing its export performance. One of these is the high price that the industry has to pay for its raw material viz cloth. Quality of cloth is also a matter of great importance. Efforts are being made by all the authorities concerned to ensure that these disadvantages of the clothing manufacturers of India are mitigated to the maximum possible.

Excerpts from the address of Mr Thackersey, Chairman of the Cotton Textiles Export Promotion Council, to the eighth annual general meeting of the Cotton Manufacturers Association of

The Government of India has

agency under its umbrella for the export promotion work of garments of different fibre fabrics. Texprocl set up the Ready-made Garments Panel in June 1970. Today, the Panel has enrolled as many as 450 members, and more and more people interested in exports of readymade garments of different fibre fabrics are joining the Panel. We expect that by the end of 1971, there will be as many as 500 members if not more. It is also encouraging to note that at least 50 or more ladies manufacturing high fashion garments have joined the Panel, and that their high fashion garments are finding a good market abroad. I am told that till 1968 or 1969, the bulk of our exports in cotton garments were in the traditional wear like shirts and slacks to the USSR. In 1970, the exports of fashion garments to the western countries have increased substantially and that out of a total export of Rs 6.3 crores

of cotton garments, about Rs 2.5 crores are in the form of fashion garments. While this is an encouraging development, it is necessary that we should try to increase our exports of traditional garments such as shirts, slacks, pyjamas and industrial clothing, if we are to step up our exports from the existing level of around Rs 11 crores to say Rs 25 crores or more.

In the context of the world trade in clothing of all fibre fabrics of the order of around 3,600 million dollars of both woven and knitted fabrics or around 2,000 million dollars or Rs 1,500 crores of woven fabric garments of all fibre fabrics, there is tremendous scope for India to increase her share in the world markets and I would venture to say that our legitimate share in the world markets should be at least 100 million dollars or Rs 75 crores of both woven and knitted fabrics garments.

Some of the western countries, like the USA, the UK the Common Market Countries of France, West Germany, Italy, Holland and Belgium have established quotas for export of cotton textiles, inclusive of readymade garments. It has been found that although the quota is distributed on the basis of free licensing even in the case of the USA, the utilisation is far from satisfactory. I would like to see the day when the entire quota in these countries is fully utilised.

New avenues for clothing manufacturers have also opened up by the increasing popularity of typically Indian garments. This is a field in which both alertness and ingenuity are very much necessary so that opportunities are not lost as they come, and on the other hand, one is not found sticking to fashions which are on the wane.

NYLOC Nylon Zippers are very much on the map of the world as they are here at home... Manufacturers, Industrialists and Exporters of every product that needs a fastener know that ease and convenience in up-to-date living call for an elegant and reliable fastener—NYLOC.

NYLOC never lets you down—because NYLOC is made from a continuous nylon filament, it is stronger, locks tightly, slides smoothly, is extremely supple. No rusting or loose teeth like metal zippers to stick or damage delicate fabrics. NYLOC's wide range of colours makes matching easy with modern fabrics.

NYLOC is quality controlled—NYLOC is subjected to a continuous running test which is longer than the normal life of a garment and a "pulling apart" test to assure NYLOC's firm grip.

Exporting readymade garments

By A Special Correspondent

THE United States of America, with a population of about 200 million, consumed about \$45.3 billion worth of ready-to-wear apparel of different fibre fabrics and blends in 1970. The consumption has been increasing at an average annual rate of 7.7 per cent during the '60s. Table 1 gives figures of consumption from 1960

Table 1: Apparel consumption 1960-70

Year	Consumption (Billion dollars)
1960	22.7
1961	23.3
1962	24.8
1963	25.7
1964	28.2
1965	30.4
1966	31.1
1967	36.0
1968	39.1
1969	42.6
1970 (estimated)	45.3

Western Europe with a population of over 300 million and with affluent conditions more or less similar to the United States consumes as much as the United States, if not more.

The international trade in ready-to-wear apparel was at about 3,600 million dollars in 1970, and the same has been rising at an annual growth rate of about 10 per cent. Of this about 70 per cent was in apparel manufactured from woven fabric and the balance knitted fabric garments. The recent trends however indicate that the consumption of apparel manufactured from knitted fabric is on the increase and that by about 1975, the consumption may reach 50 per cent of the total, because of its stretch properties.

In assessing the prospects of ready-to-wear apparel in the '70s one of the leading manufacturers in the United States says "our affluent society, both male and female will want ever changing fashion in its clothes and is willing to pay. It is not satisfied with last year's styles. Consumers want change and this means increasing sales volume in apparel".

Hong Kong, one of the leading manufacturers and exporters of apparel in the East, exported over \$680 million worth of apparel in 1970, more than 50 per cent of it in woven fabric wear and the balance in knitted fabric wear of different fibre fabrics and blends. In 1969, its exports were of the order of \$630 million, and in 1971, its exports may cross the \$700 million mark.

India's exports of apparel of all fibre fabrics and blends manufactured from woven as well as knitted fabric were of the order of about \$26 million in 1970.

Table 2 gives the figures of exports during the past nine years.

India has gone a long way in increasing its exports from a meagre \$880,000 in 1962 to \$25.70 million in 1970, an impressive increase, indeed. However, in the context of the world trade the exports are insignificant. It is more so because our bulk exports are to the rupee payment countries and particularly to the USSR. In 1970, out of a total export of Rs 1,928 lakhs, over Rs 1,300 lakhs were to the USSR. It is only during the past two years that there has been some diversification, and especially in the case of exports of apparel manufactured from cotton woven fabric, the offtake by the Western countries is almost as much as the offtake by the USSR.

In the international trade in apparel of around \$3,600 million in 1970, the USA accounts for more than \$1,200 million, Western Europe another \$1,200 million and the balance is shared by Hong Kong, Japan, China, South Korea, Taiwan, Philippines, Pakistan, Singapore and India. Recently, Ceylon has started exporting apparel manufactured from imported fabric from China and Japan, and the USSR is the main buyer.

In the context of the ever-increasing world trade in apparel, a question that arises is what should be India's legitimate share. If India is to increase the unit value realisation of textile exports, it has to rely more and more on apparel exports, and it would be reasonable to lay down a target of \$100 million or Rs 75 crores per annum, of which half will be woven fabric apparel and the other half knitted fabric apparel of all fibre fabrics.

In the case of exports of woven fabric apparel of different fibre fabrics such as cotton, wool, natural silk, synthetics and

Table 2: Exports of apparel 1962-70

Year	Woven	Knitted	Total	In million dollars
1962	22	20	42	0.88
1963	260	22	282	5.33
1964	220	30	250	5.25
1965	350	130	480	10.23
1966	358	273	631	8.41
1967	335	400	735	9.80
1968	540	622	1,162	15.49
1969	830	626	1,456	18.00
1970	1,100	828	1,928	25.70

Note: The figures for 1970 have been estimated.

blends, there is considerable scope for exports from the existing level of Rs 11 crores in 1970.

During 1970, our exports reached a level of Rs 6.50 crores which was Rs 4.37 crores in 1970. Our exports to some of the

Western countries like the USA, the UK, and the Common Market countries of France, the Federal Republic of Germany, Italy, Belgium-Luxemburg and the Netherlands are regulated by annual quotas. If only we could fully utilise the quota ear marked year by year, we could increase our exports to Rs 20 crores. Then there are the other countries like Sweden, Denmark, Norway and Finland, which are large potential importing countries. While we have achieved some good results in Sweden—from Rs 34.3 lakhs in 1969 to Rs 47 lakhs in 1970—this market alone can consume another Rs.50 lakhs or more of apparel if the market is properly nourished.

The main problem faced by the apparel manufacturers is the supply of fabric at reasonable prices. In normal times, it has been found that the price of Indian cotton fabric is at least 30/35 per cent higher than the price of the fabric in Japan or Hong Kong. In abnormal times, like at present, the Indian price is 45 to 50 per cent higher. In such circumstances it becomes extremely difficult for an apparel manufacturer to go in for exports in a big way.

It may be interesting to note that apart from exports of about Rs 341 lakhs to the USSR, out of total exports of Rs 650 lakhs to all the markets in 1970, at least 90 per cent of our exports to the other markets were in the fashion field, and hardly anything in the utilitarian field such as shirts, slacks, pyjamas, etc. In 1970, we could do hardly anything in the utilitarian wear, because in this field our prices were at least 15/20 per cent higher than the international prices. In the case of utilitarian wear, the international price is more or less established, and if our prices are higher even by a few cents, we lose the business. However, unless and until we build our trade in the bulk utilitarian wear, it is next to impossible to step up our exports.

In this respect, it is necessary that a more realistic scheme of export promotion is evolved, by which the supply of fabric to the apparel manufacturers is assured, and that there are no violent variations in prices from month to month, as has happened at present.

In this context it is encouraging to note that the Government of India has now introduced a scheme for import of cotton fabric with specialised finishes for export in the form of garments. If this scheme is properly implemented avoiding procedural delays, it may be possible to step-up exports considerably from the existing level. The scheme may also act as a break for indigenous manufacturers to keep down the prices at reasonable levels.

Natural silk manufactured on handlooms is a speciality of India, and in 1969, India's exports of natural silk textiles were of the order of Rs 1965.8 lakhs of which apparel accounted for Rs 66.8 lakhs. In 1970, the exports of fabric and all made-up items like scarves declined to Rs 1357.2 lakhs. However, the exports of apparel including neckties increased to Rs 101.6 lakhs, an increase of over 50 per cent compared to 1969. Natural silk fabric apparel exports hold considerable prospects, and it is encouraging to note that a number of ladies possessing a knack for designing have come into the field, and it seems that as in 1970, our exports in 1971 should be much higher. The exports of natural

tips to tackle the shrinkage problem

Cover up in burkha - not very flattering, unless you have some thing to hide.

Don't wash your clothes - a guaranteed 'people repellant'

Switch to paper dresses - disposables are in the news, but watch out, for the Rippers

Give up - join the naturalists.

Or let us tackle it for you. The "SANFORIZED" label assures you that shrinkage is no problem. Cottons and cotton blends bearing the label SANFORIZED, never shrink out of fit, retain their shape no matter how often they are washed. All over the world people rely on the SANFORIZED label. So should you.

Issued by Cluett, Peabody & Co. Inc. (Incorporated in the U.S.A., with limited liability) proprietor of the registered trademark "SANFORIZED". The proprietor uses this trademark or permits its use by registered users, only for the tested fabric which meets its strict residual shrinkage requirements.

silk ties in typical Indian designs have been picking up, and in 1971 the exports should reach a level of Rs 50 lakhs or more from Rs 32.25 lakhs in 1970.

Western countries are the bulk buyers of natural silk apparel, but in these countries the import tariffs for apparel are much higher than for fabric, as high as 40 per cent in some countries, whereas the import tariff on fabric is much lower. This reduces the competitive capacity of the silk apparel.

Wholly wool apparel is losing its charm, though some of the countries like the UK, Federal Republic of Germany, to some extent the USA, and Australia and New Zealand do patronise wholly wool apparel. India's exports were mainly to the USSR, during the years 1967 and 1968. However, since then the USSR more or less stopped buying woollen apparel and switched on to terry/wool apparel, particularly trousers. The exports in 1970 were not more than Rs 20 lakhs or so. The prospects for future are now considered to be bright.

In 1969, the total exports from India of apparel manufactured from rayon, synthetic and blended fabrics were of the order of Rs 326.5 lakhs, which declined to Rs 320.5 lakhs in 1970. However, this is the age of synthetics, and it is necessary that we evolve a realistic scheme for export of

apparel manufactured from blended fabrics such as polyester/wool and polyester/cotton fabric apparel. This is a field where India has to take considerable strides.

The apparel industry has been pressing the Government since 1966 for setting up a separate Export Promotion Council for all fibre fabrics. It is encouraging to note that short of a separate Council, the Government has centralised the export promotion work of all fibre fabrics apparel under the umbrella of the Cotton Textiles Export Promotion Council (TEXPROCIL). The Council set up a Readymade Garments Panel in June 1970, and by now it has enrolled about 450 firms as its members. Now the apparel export interests can look to one agency instead of different agencies charged with the responsibility for the export promotional work connected with apparel of different fibre fabrics. While this is a major development in the export promotional efforts, it is necessary that all the work including the distribution of quotas, where quotas have been established with foreign countries, is centralised in the Texprocil, which has years of experience in the administration of the quotas. At present, the quota for "India Items" in the case of the USA, is handled by the Handicrafts Board and handloom apparel quota by the Handloom Export Promotion Council. When there is a centralised agency, all

the work should be centralised in that agency instead of its being done by different agencies.

The recent decision taken by the Government in allowing imports of fabric of different fibres and blends including cotton fabric with specialised finishes for conversion and re-export in the form of garments is a major move in the right direction. If the scheme is implemented without too many procedural bottlenecks at the official level, there is no doubt that the Indian garment industry will be able to take maximum advantage of the scheme for increased exports of apparel. Hong Kong, South Korea, Taiwan, Singapore and Philippines have been able to build large exports in apparel, and one of the main reasons for this development is the easy access to imported fabric for conversion into apparel and re-export. Even countries like Pakistan and Ceylon having cheap labour have fallen in line with the other South-East Asian countries, and allow import of fabric for re-export in the form of apparel. In the case of Hong Kong, for example, it is estimated that out of \$680 million worth of exports of apparel of all fibre fabrics and blends, only about 50 per cent accounts for net foreign exchange realisation.

Apparel manufacturing machinery, especially various types of sewing machines, is undergoing day-to-day changes and various kinds of labour-saving devices are being introduced in the four leading manufacturing countries like the USA, the UK, the Federal Republic of Germany and Japan. So far as India is concerned, it has to depend upon imported machinery for the manufacture of apparel. It was recently reported that some of the leading manufacturers produce as many as 600 types of apparel manufacturing machines. Japan, for example, manufactures highly specialised sewing and other apparel manufacturing machines. But on account of major research going on in other manufacturing countries it imported about 12 to 15 thousand sewing and other machines last year. If India is to make a bold bid for increasing exports of apparel, a more simple scheme for imports of such machinery and spare parts should be introduced.

Till 1968 or so, India's exports were mainly in the utilitarian field like shirts, slacks and some industrial clothing. Like the Bleeding Madras apparel boom in 1963-65, there was a sudden demand for fashion garments of pop apparel in 1969 and 1970 and it is encouraging to note that especially in 1970, at least 40 per cent of Indian woven fabric apparel export is in the fashion field. While the fashion field is vast it is necessary that side by side, utilitarian field of classical shirts, slacks, and also the industrial field is fully exploited, so that India may fully utilise its expertise and labour to earn the maximum foreign exchange.

With regard to prospects in the '70s, one of the leading US manufacturers says that one has only to look back over the changes that have taken place in the past 10 years in the American life-style to realise that further changes are inevitable during the next decade. He says that these changes will be even broader in scope and depth than those that have taken place in the '60s. He ventures to predict that the American consumer 10 years hence will be prone to spending money on consumer goods. Here lies the scope for India.

COATS
the thread of quality
that runs through
India's textile exports

COATS, the world's leading thread makers are in a position to offer Indian manufacturers and exporters of textile goods, ready-made garments and shoes, a complete range of superior threads. Strong, wearable and readily available. COATS threads will add their international reputation to India's textile exports in competitive international markets.

Focus on 'seam pucker'

By V. CANTHASWAMY

HOW often do we notice that the small wrinkles in the collar, cuff, pocket or any other seam affect the good appearance of a garment? "Seam Pucker" is among the most commonly recurring problems in the stitching trade and it merits a satisfactory answer. Is the pucker problem capable of solution?

Experience gained over the years, both under "laboratory" conditions and on the factory floor, has pointed the way towards reduction, if not elimination, of puckering under all but the most exceptional circumstances. Advice on pucker has also been forthcoming from many other sources, but as the sewing thread appears to many users to be the chief cause of difficulties, Coats have had to study the problem not only in relation to thread but taking into account the many other factors which can have a direct bearing on seam pucker.

The most striking aspect of seam pucker which is immediately evident on closer investigation is the number of variables which may individually or in concert result in seam shrinkage or puckering. These are: Condition and type of sewing machine; needle size, number of stitches per inch, and direction of sewing; tension and stretch imparted to the thread and fabric at sewing; fabric construction and finish; and thread and fabric shrinkage.

The Machine: The mechanical condition of the sewing machine is an important consideration. A machine which is not carefully maintained and requires adjustment and oiling can produce an appreciable degree of puckering compared to the same machine working efficiently. This is perhaps elementary, but, nevertheless, important. As regards the type of machine used, it will be found in general that a chain-stitch seam will give less pucker than a lock-stitch seam. This is due to the fact that, if the top and bottom threads are balanced in a lock-stitch, the stitch knot will lie midway between the two surfaces of the fabric. In the chain-stitch formation there is no crossing or looping of the thread in the fabric, and, consequently, there is less internal bulk for each stitch formation.

Needle size and stitch size: To reduce puckering the smallest diameter of needle

possible should be used, there being less distortion of the warp and weft yarns; for the same reason, the number of stitches per inch should be kept to a minimum consistent with the end-use properties of the material. The direction of sewing will also affect the extent of distortion to the material and thus contribute to the puckering. Generally speaking, a seam running parallel to the weft is less likely to show signs of pucker than one parallel to the warp, and a seam sewn on the bias of the material still less likely. While it would certainly appear to be a happy solution to the pucker problem if all seams were to be stitched "on the cross", this is obviously far from practicable in most cases, and would certainly create vast problems for fabric designers and makers-up.

Sewing tensions and fabric feeding: It is known that the high tensions operating during sewing can play a large part in producing puckering of the seams. In any assessments which have been made of the relative importance of the variables in this problem of pucker, this aspect has emerged as perhaps the most important factor. Unfortunately, any significant reduction in the tension at sewing may result in a "gaping" seam of poor appearance and strength. The stretching of the cloth during its manipulation by the machine operator also contributes to seam shrinkage, e.g., the operator might have a tendency to push or pull the fabric into the needle area. Pucker can also be introduced in this way as a result of slippage between the feed-dog and the fabric. Careful attention to the timing and setting of the feed mechanisms of the sewing machine, plus a little judicious guidance of the material by the operator, will contribute greatly to reducing pucker in the finished seam.

Fabric construction and finish: Since puckering is frequently due to the differential shrinkage of the thread and the material, it is obvious that the nature of the material will be of considerable importance. The introduction of resin finishes for non-iron fabrics and easy-care, commonly known as "wash and wear" or "drip-dry" garments has considerably added to this problem in recent years.

Thread and seam shrinkage: A comprehensive examination of the effect of cotton thread shrinkage and seam shrinkage made in Coats Research Laboratory produced the following significant results:

The shrinking of thread in the seam is independent of the type of spool or cop from which the thread is taken. Since tensions at sewing are greater than those met in any of the final winding operations carried out by the thread manufacturer, it follows that the type of packing in which the thread is prepared can have no effect on seam shrinkage.

Seams made from threads which had been shrunk by subjecting them immediately prior to sewing to identical treatment as used in the shrinkage tests, shrink by a similar amount as seams made from threads with no pre-shrunk treatment.

The amount of seam shrinkage is less for fine counts than for coarse counts.

From this it would appear that the most significant factor in seam shrinkage or puckering is the tension applied to the thread during sewing. In other words, what is commonly referred to as "seam shrinkage" may, in fact, be the relaxation of the thread from tension applied in the stitching operation.

From time to time, there appear on the market threads which are reputedly "pre-shrunk", but, for the majority of stitching operations, these threads have little more than "gimmick" value. Since "pre-shrunk" threads must still be sewn under some degree of tension and will relax from this in the same way as an untreated thread, little advantage is likely to be gained by their use. Of course, specially "treated" threads may have a definite advantage in the rainwear trade as a counter to "after-wetting" pucker.

There is little doubt that the use of the lightest possible sewing tensions provides the major part of the solution to the pucker problem, but only insofar as it arises from the so-called "shrinkage" of thread in a seam. The choice of a suitable sewing thread is in itself a matter of considerable importance. Obviously the use of the finest size, and a suitably fine needle, will serve to minimise pucker, but thread strength is also an important factor. Strength should be synonymous with quality and a sewing thread produced from high-quality long-staple cotton and spun, twisted and processed to give a smooth, even finish, with a nicely balanced twist, will clearly give not only the resultant seam strength required but also a better sewing performance, with the minimum of drag in the tensions.

While it often tends to obscure the issue, no investigation into the cause and solution of pucker would be complete without a word on synthetic fabrics and threads and the "after-wetting" pucker problem. With the advent of "wash and wear" or "drip-dry" fabrics, the home laundering activities of the public have been greatly stimulated, and many garments which in former years would have been dry-cleaned are now being consigned to the wash-tub. This being so, it is worthwhile

considering how the thread in a seam is affected during washing and how after-wetting pucker arises. The thread, in absorbing moisture, swells, and with the increase in diameter comes a proportionate shortening in length. As a result, the yarns of the fabric become distorted, and although on drying the thread resumes its original dimensions, the fabric tends to remain cockled. A minute looseness of stitch is obviously necessary to offset this shortening in the length of the thread when wet, which bears out the recommendation to apply only the lightest possible tensions at sewing.

The many resin-treated fabrics now being marketed to provide cotton's answer to the synthetic challenge have brought additional complications in that the finish increases that density of what is already a closely woven material. Since puckering is basically a distortion of the fabric yarns, a closely woven material will be more susceptible to puckering than one which is loosely constructed. This type of resin finish is, of course, most frequently applied to light-weight cottons or poplins, and similar problems are also presented by the crease resistant finishes which have been developed for rayons and cottons.

Synthetic and blended fabrics must be sewn with threads of similar dimensional stability. So, in the end, we cannot promise that puckering can be entirely eliminated, but we hope to have shown the true nature of the problem and the way in which it can be greatly minimised.

Close attention to the correct relation of needle and thread size to fabric construction, and application of the lightest possible sewing tensions, together with careful manipulation of the material in the needle area, will go a long way towards solving pucker problems in the sewing room.

The collar with
a multiple personality
comes only on superb
cordel shirts.

The one-above-all Cordel fused collar is what makes every Cordel shirt superb. Impeccably styled, meticulously tailored as the shirt itself.

Look at it from every angle. Look different on every shirt? Naturally. Because it adapts itself to the fabric—and fits as a classic collar should.

The cuffs? Designed to complement the collar. Never wilt. Never soften.

Plus a bonus: buy a Cordel shirt for much less than you think—it gives you much more than you thought. For we make the fabric and the shirts.

COROMANDEL GARMENTS LIMITED

Problems of marketing

By R. D. BUBNA

THE readymade garments industry has to fulfil three main tasks: clothe the common man, provide protective or industrial clothing or uniforms, and earn valuable foreign exchange by exports. The pattern of this industry at present is that for clothing the common man, it has been able only to find a place among the urban population of the wealthy or higher middle class category through retail/departmental shops. For providing protective clothing or uniforms, it has adequately to meet the demand of the railways, municipalities, big industries, etc., but only with poor quality of stitching. And lastly, in the export field it is trying very hard to achieve bigger targets year after year against heavy odds, in spite of the

proclaimed Government policy and active steps to provide all assistance.

There is no denying the fact that there is vast scope for a tremendous development of this labour-intensive industry. Yet, the tragedy is that, but for a few exceptions, idle capacity exists in a majority of the organised factories, and even those which are running cannot plan for long-term, continuous production on single or two shifts even for the next six to eight months and have to continuously search for new items or markets to be able to run the show. Sometimes those units which are running feel the urgent need to expand themselves further while others remain idle. Nevertheless, they are not sure that they will be able to continue the increased production for long.

Let us now go into the difficulties in their way and the reasons for this strange phenomenon. In clothing the common man the industry suffers, from a variety of

handicaps. These can be summarised as follows:

Uncertain supply position of one quality of fabric at a fixed, reasonable price for a longer time from the same source. Either the price is increased every time or the quality is changed. The manufacturers have mostly to depend on wholesalers and semi-wholesalers of fabrics for their raw material supplies.

Lack of distribution channels in reaching the rural population. The local individual tailor in a village could still stitch a shirt or a garment at a very cheap price and with less consumption of cloth for individual requirements; though, without the unnecessary presentation materials like pins, cardboard inserts, labels and tags, collar lifters, polythene bags and cardboard boxes, etc. which are very essential for marketing and handling by the urban retail/department stores.

The evil practice of consignment basis or long-term credit sales by readymade garment factories to upcountry retailers leaves the manufacturers with mounting undisposible end-pieces, outdated designs, colours and qualities of fabrics, unsorted sizes of garments, bad debts and disputes - earned profits remaining with buyers as outstanding dues.

Apathy of the Government in the matter of allowing liberal import of latest machines, ancillary equipment and balancing and replacement machines for old machines and spares to make the domestic base sound and flexible.

Mr Bubna is Manager of the Garment Division of Todi Industries Pvt Ltd, Bombay

VERYVERY

It's got what it takes.
Like the waistband that shapes and stays.
A crotch that's comforting.
Pockets that aren't bulging.
A cut that's proportioning.
Contouring that's shaping.
Side-seamings that prevent knees-bagging.
Fold-ins that are stitched blinding.

While these difficulties are also common to the industry in regard to the production and marketing of protective clothing, the system of tendering of rates for stitching charges and the average consumption of cloth by Government, semi-Government and the civil authorities and big industries which provide their own fabrics, and the practice of awarding orders to the lowest rates and least consumption lead to the following adverse results:

The evil practice of employees returning stitched garments to the factories which give much less cloth or value of the garment in exchange.

Large orders far in excess of their capacity getting in the hands of very small contractors employing temporary piece-rate basis tailors and the resultant delay in supplies, or leading to further sub-contracts resulting in deterioration in quality.

item to another, which makes it difficult to plan long-term production.

In earning valuable foreign exchange by exports, the difficulties faced by the industry are numerous but we may cite a few basic ones here.

Local sales or fabric-form export outlook of the mills and factories producing basic fabrics as also their domination in respective export promotion councils and commodity boards.

Quality, finish and printing, etc. of Indian fabrics comparing very unfavourably pricewise with those of other countries, in the international market for traditional items of garments.

The resultant reliance only on Oriental designs of handloom and silk fabrics, etc., which could only be suitable for fast-changing seasonal fashion garments, orders for which could be only for smaller lots in a variety of colour schemes and styles and requiring deliveries at very short notice.

Miserable lack of availability of international quality trimmings and embellishments and basic fabrics for sampling purposes.

Arbitrary and impractical attitude of the postal appraising section which makes it almost impossible to get timely samples of garments from abroad to indicate style, workmanship, measurements, etc. for pre-

paring counter samples and offers. The notice of arrivals are not sent for weeks and import customs duties and penalties are levied exorbitantly.

Lack of training, education and knowledge about changing fashion trends, styles and fabric qualities and colour schemes, etc., in foreign markets, liaison between international fashion designers' clubs and Indian manufacturers being practically absent due to the very high service charges of foreign designers and trend setters, there being lack of facilities for remittance of their service charges in foreign exchange by Indian manufacturers.

There is also complete lack of details in the hands of manufacturers in India regarding quality of fabrics, styles, measurements and finish of the garments and trimmings and embellishments for such items of uniforms for which large tenders are regularly issued by Middle East and African Arab Governments and oil companies. The intimation about such tenders are also received and circulated very late, hardly leaving any time for seeking clarifications.

There is abnormally long delay in taking policy decisions for renewing, changing or starting new export promotional schemes by the Government which result in loss of orders that could be secured by timely decisions.

Even where decisions are favourably taken, cumbersome and numerous restrictive drills and procedures and formalities have been provided by excise, import and export authorities and export promotion councils and sponsoring authorities with regard to refunds and drawbacks, incentive licences and cash assistance and export quotas, etc, which result in rendering the exporting manufacturers to the mercy of scores of officials who in their zest to safeguard revenue or to follow the rules to the literal meaning or justify their existence in the office or in the department often suffer from a misuse mania and even forget the basic concept of export promotion and act inconsistently and whimsically to hinder or delay exports and as such the manufacturers take months and even years to realise the overall total benefits of export (which are too meagre). With a little slip or mistake, either the shipment is delayed, L/C is expired, order is cancelled, goods remain back with full liability of cost or the manufacturers stand to lose the export benefits--credit for which is already allowed in export prices and thus it becomes a losing proposition.

All importance is given only to the top and very few leading manufacturers in representations on foreign tours; nominations on export promotion councils, regional or advisory policy forming or licensing bodies, etc., with the result that smaller but numerous manufacturers hardly get any chance to come up, increase exports or expand their capacity or modernise their equipment.

If this labour-intensive industry, which has a very large and tremendous employment potential with minimum capital investment requirements, has to play its correct part in strengthening the economy it is necessary to adopt a very bold and unorthodox attitude and provide liberal and simple remedies to the existing ills. The promotional schemes framed must also be short and very simple and practical for implementation and should be able

A high-contrast, black and white photograph of a hand holding a small, irregularly shaped, light-colored object, possibly a piece of wood or a small animal, against a dark background. The image is grainy and has a high-contrast, almost stencil-like quality. The hand is positioned with the palm facing upwards, and the fingers are slightly curled around the object. The object itself is light-colored and has a rough, textured surface. The background is dark and indistinct.

CROP AND COMMODITY SURVEY: MARCH 1971

Marketing of wheat begins

By Commerce Research Bureau

THE marketing of wheat has begun in the major wheat producing States of Punjab, Haryana, Madhya Pradesh and Rajasthan. In Uttar Pradesh, the marketing of wheat will commence in mid-April. Reflecting this, the prices of wheat in the selected markets declined by about 7 per cent. With the pace of arrivals gathering momentum in April, the prices of wheat are expected to fall further. Already, the current prices of wheat are 26 per cent lower than the level a year ago.

On March 25, the Agricultural Prices Commission (APC) released its "Report on Price Policy for Rabi Foodgrains for the 1971-72 Season". The APC's two major recommendations are:

(1) Reduction of the procurement price for red wheat from Rs 71-74 per quintal fixed by the State governments for the 1970-71 marketing season (April-March) to a uniform price of Rs 68 for the 1971-72 marketing season and for Mexican and indigenous common wheat from Rs 76 to Rs 74 per quintal. In recommending reduction in the wheat prices the APC has stated that for a sustained growth of output, incentive has to be kept alive, but the appropriate way of doing so would be to protect the cultivators' profit margins through increases in the efficiency of cultivation and consequential reduction in the unit cost of output rather than through artificial props to prices. However, the State Chief Ministers are unlikely to accept this recommendation. On March 31, the first reaction came from the Chief Minister of Punjab, Mr Prakash Singh Badal. He said that the procurement prices for wheat as recommended by the APC are too low and demanded a higher procurement prices for wheat.

(2) A higher procurement target of four million tonnes for the 1971-72 marketing season out of the 1970-71 crop, against the

procurement target of 3.7 million tonnes and actual procurement of 3.2 million tonnes in the preceding season. It may be noted that the pace of increase of wheat procurement in recent years is not commensurate with the rise in wheat output. For instance, during the last three years (1967-68 to 1969-70), while the production of wheat increased from 16.5 million tonnes to 20 million tonnes, the procurement of wheat increased from 2.3 million tonnes to only 3.2 million tonnes. The higher procurement target proposed by the APC is justified on the following two grounds: (i) In 1970-71, the outturn of wheat is estimated to have increased by one million tonnes to 21 million tonnes. (ii) The Government has decided to stop the concessional food imports by the end of 1971.

The food balance for the public distribution system for the calendar year 1971 is estimated to be 8.5 million tonnes. Of this, the procurement of *khari* cereals accounts for 3.5 million tonnes and the proposed wheat procurement amounts to four million tonnes. The gap of one million tonnes is likely to be made up by imports. At the end of 1970, the country's buffer stocks of foodgrains stood at 34 million tonnes. On April 1, India concluded a PL 480 agreement with the US for the import of 1.57 million tonnes of wheat, 2.25 lakh bales of cotton and 75,000 tonnes of vegetable oils mainly soyabean oil. The wheat import is intended to help the country achieve its foodgrains buffer stock target of five million tonnes.

The supply and demand position of various agricultural commodities, their prices and other related developments during March are reviewed in the following paragraphs. Our State-by-State reviews appear after the commodity reviews.

Rice

The daily arrivals of rice at the up-country centres declined during March but for this particular time of the season, they were normal. The prices of rice in the Tadepalligudem market (Andhra Pradesh) showed a further rise of 7 per cent during the month under review owing to the seasonal demand. However, in the Hapur (Uttar Pradesh) and Calcutta markets, the rice prices dropped marginally. The current prices are marginally higher than the level a year ago.

Wheat

With the commencement of the marketing of new wheat crop, the supply position of wheat improved markedly in March. The APC has estimated the overall production of wheat to increase by one million tonnes to 21 million tonnes in 1970-71. Reflecting this, the prices in the selected markets declined by about 7 per cent. Significantly, the current prices are lower by about 20 per cent than the level a year ago.

Barley

The supply position of barley—a *rabi* crop—improved with the arrivals of new crop. Reflecting this, the prices of barley in the Bhatinda market (Punjab) at Rs 41.70-46.25 per quintal showed a further fall of about one per cent. The current prices in this market are about 32 per cent lower than the level a year ago.

Jowar

The new crop of *rabi* jowar has started flowing into the markets. However, the overall supply position of jowar in the country is expected to be significantly

lower than last year's level owing to the shortfall in the outturn of Maharashtra crop, a major producing State in the country. The prices of jowar in the Raichur market (Mysore) at Rs 78 per quintal showed a further sharp fall of Rs 11 per quintal. The current price is lower by about 20 per cent than the level a year ago.

Bajra

The supply position of bajra continued to be satisfactory in the country. But with the start of summer season, the demand for bajra has declined. Reflecting this, the prices of bajra (superior) in the Bombay market at Rs 62-72 per quintal showed a fall of 4 per cent. However, in the Hapur market (Uttar Pradesh), the prices ruled steady. The current prices in these two markets are lower by about 24 per cent and 48 per cent, respectively, than the levels a year ago.

Maize

After declining in the preceding month the prices of maize in the Hapur market (Uttar Pradesh) at Rs 52.50-60 per quintal moved up sharply by about 15 per cent owing to the brisk demand in the face of reduced arrivals. However, in the Bhatinda market (Punjab) the prices were steady. The current prices in these two markets are about 19 per cent lower than the levels a year ago.

Tur

The supply position of tur was satisfactory and the daily arrivals at the terminal centres were normal. In the Bombay market, the prices of tur (Berar white) at Rs 110-112 per quintal showed a fall of about Rs 9 on account of good arrivals from the producing centres. On the other

hand, the price in the Hapur market (Uttar Pradesh) at Rs 135 per quintal remained unchanged. The current prices in these two markets are significantly lower than the levels a year ago.

Gram

For gram, Uttar Pradesh, Haryana, Rajasthan and Madhya Pradesh are the important producing States. The harvesting is completed in March and the new crop has started entering the markets. Reflecting this, the prices of gram (*kahl* variety) in the Rohtak market (Haryana) dropped by 3 per cent. However, in the Botabai market, the prices of gram (Punjab variety) at Rs 84-86 per quintal showed a rise of Rs 4 owing to the festive demand. The current prices in these two markets are lower by about 24 per cent than the levels a year ago.

Cotton

For 1970-71 (September-August), the estimated production of cotton continued to be placed lower at 54 lakh bales, against 58 lakh bales during 1969-70.

With the Gujarat cotton crop in the market, the supply position of cotton continued to be easy for the second month in succession. As a result, the prices of the popular varieties in the Bombay market declined further by 2 to 3 per cent during March. Nevertheless, the current prices are about 40 per cent higher than the levels a year ago.

The data on the consumption of cotton by mills for the first quarter (September-November 1970) have now become available. According to the data, the consumption of cotton has been placed high-

er at 15.45 lakh bales during September-November 1970, against 14.96 lakh bales during the same period last year. Still, the pace of imports of cotton is slow. During the period September 1, 1970 to March 13, 1971, the imports of cotton aggregated 1.66 lakh bales, against 3.91 lakh bales during the corresponding period in the preceding season. The sales of Bengal *Deshi* cotton registered for export, from September 1, 1970 to March 27, 1971 amounted to 1.23 lakh bales, against 1.81 lakh bales during the comparable period of last year.

The Union Government in consultation with the State governments concerned has finalised details of an Intensive Agricultural Development Programme (IADP) for boosting cotton production. This programme will be initiated in nine States covering an area of 5.8 lakh hectares initially, which will be gradually extended to 13.5 lakh hectares during the course of the next three years. The districts selected for this programme are:

Bhatinda (Punjab), Hissar (Haryana), Ganganagar (Rajasthan), Khargone and West Nimmar (Madhya Pradesh), Baroda (Gujarat), Yeotmal (Maharashtra), Kur-nool (Andhra Pradesh), Karwar (Mysore) and Tirunelveli (Tamil Nadu).

Jute

The production estimate of jute and mesta for 1970-71 (July-June) continued to be placed lower at 62 lakh bales, against 67.50 lakh bales in 1969-70. Even then, the overall supply position of raw jute continued to be satisfactory in March also. In fact, the jute mills have satisfactory stocks of raw jute with them.

In the Calcutta market, the daily arrivals of raw jute declined from 40,000 maunds in February to 35,000 maunds in March. However, these arrivals were normal. Owing to rather sharp rise in prices of jute goods section, the price of Assam Bottoms in the Calcutta market, after declining in the preceding month, moved up sharply by about 18 per cent. The uptrend

in jute market is likely to continue for some more weeks on account of stoppage of jute supplies, both raw and finished, in the world market from East Pakistan. The current price is higher by about 13 per cent than the level a year ago.

In the meantime, sowing of jute was in progress in West Bengal, Assam, Bihar and Orissa. The acreage under jute is expected to be more during 1971-72 season.

Oilseeds

During 1970-71, the outturn of groundnut (nuts-in-shell) in the country is expected to reach a record level of 62 lakh tonnes, against 54.55 lakh tonnes in 1969-70. Harvesting of the *rabi* oilseeds—rapeseed and mustard, linseed and castorseed—began in March and the marketing of these oilseeds has commenced. During 1970-71, the production of five major oilseeds is expected to be higher than that in 1969-70. Already, the daily arrivals of castorseed in Gujarat and Andhra Pradesh have amounted to 6,000 bags and 1,500 bags, respectively, during the last week of March. This indicates that the outturn of this crop will be better than last year. The arrivals of rapeseed and mustard and linseed are picking up.

In Tamil Nadu and Andhra Pradesh, the marketing of summer groundnut crop has started. This has improved the supply position further. In Madras market, flow of daily groundnut arrivals increased from 25-30 tonnes during the last week of February to 160 tonnes towards the close of March. Further, in Saurashtra markets, the farmers have started unloading their stocks. As a result, the prices of groundnut fell in all the major oilseeds markets. But the fall was particularly sharp in the Madras market (10 per cent). The current prices of groundnut are significantly lower by about 13 per cent than the level a year ago. On April 1, the Government has signed an agreement with the US for the import of 75,000 tonnes of vegetable oil, mainly soyabean oil. This will keep the groundnut oil prices in check.

Sugarcane

About three-fourths of the sugarcane crop of 1970-71 has been cleared from the fields. Of this, about half the sugarcane supplies have gone for the manufacture of gur, one-third for the manufacture of sugar and the rest for the manufacture of *khandasari* and chewing and planting purposes. The planting of sugarcane for 1971-72 season was in progress in Uttar Pradesh, Maharashtra, Bihar, Tamil Nadu and Andhra Pradesh. The planting is expected to be normal.

Sugar

The production of sugar during the period October 1, 1970 to March 7, 1971 of the current season (October 1970-September 1971) was marginally higher at 25.90 lakh tonnes, against 25.30 lakh tonnes in the corresponding period of the preceding season. At this rate, the production of sugar during 1970-71 may reach the last year's record level of 42.60 lakh tonnes.

The stocks of sugar with the sugar factories are now enormous. However, owing to the seasonal demand, the prices of sugar (C-30) in the Bombay market at Rs 189-190 per quintal showed an increase of about Rs 8 in March. The current prices are higher by about Rs 9 per quintal than the level a year ago.

Protein gap widens

IN view of the low per capita intake of meat, eggs, fish and milk, pulses are all the more important as a source of protein. Besides, pulses also help fix free nitrogen from the air and thereby enhance soil fertility. In this context, it is disturbing to note that the average output per hectare of pulses in India has been falling instead of rising. Between 1949-50 and 1968-69, the compound growth rate of the productivity of pulses showed a decline of 0.10 per cent. Thanks, however, to some increase in area, the production of pulses showed an increase of 1.16 per cent per annum during the same period. But the population increased at the rate of about 2.5 per cent per annum during this period. As a result, the per capita availability of pulses has been falling since 1958-59.

Availability of pulses

Year	Output (million tonnes)	Net availability (million tonnes)	Per capita availability (kg. per year)
1951-52	8.42	7.97	21.6
1955-56	11.05	10.23	25.6
1958-59	13.15	11.55	27.3
1960-61	12.70	10.34	26.4
1965-66	9.80	8.58	17.0
1969-70	11.69	10.23	18.6

During recent years, however, even the area has started declining. The area under pulses declined from 24.3 million hectares in 1958-59 to 21.3 million hectares in 1968-69. This has resulted in a continuous decline of production of pulses.

As irrigation is extending to formerly rainfed lands, the cultivation of pulses is being pushed out to make room for the high-yielding varieties of cereals and millets. Both in Punjab and Haryana, the area under gram has declined by about 60 per cent between 1960-61 and 1968-69.

Any further fall in the production of pulses will cause a steep rise in their

prices and pulses may cease to be the poor man's food. Already, with the year 1961-62=100, the index number of wholesale prices of pulses during the week ended February 6, 1971 stood as high as 240.4, compared to 1944 for cereals. Efforts should, therefore, be made to divert some of the lands with inadequate facilities of irrigation to the cultivation of gram, tur, moong and peas. Here the extension agencies can play an important role in educating the farmer in crop planning.

The Government is also alive to this problem. In 1965, an all India co-ordinated pulses project was initiated to undertake a nation-wide research effort on pulses at the Indian Agricultural Research Institute, two regional centres and four sub-centres. Under this project, all-India co-ordinated varietal trials have been conducted. These trials have shown that several varieties have much wider adaptation than was known before.

Experiments have shown that early-maturing (about 120-130 days) varieties of arhar such as the "Type 21" evolved in Uttar Pradesh can give, if properly fertilised, substantially increased yields even under rainfed conditions. Thus with proper inputs, this variety gave as high as 32 quintals of yield per hectare, against the average of about seven quintals for the country. A short duration variety of moong (70 days), Pusa Basakhi, gives an yield of nearly 10 quintals per hectare and can be grown as an additional crop in the intervening period between the two main seasons of *rabi* and *kharif* cereals.

Another major advance has been the development of a number of varieties of kesari dal which are virtually free of neurotoxic materials. This crop is grown in about two million hectares in the country, but the pulse is not very safe as its consumption can lead to a crippling disease. However, the new varieties will help rehabilitate kesari dal which is otherwise very nutritious.

Khandsari

Khandsari producing units are getting adequate sugarcane supplies at Rs 6 to Rs 6.25 per quintal. Hence, they are utilising their full capacity. In the Muzaffarnagar market (Uttar Pradesh), the prices of khandsari at Rs 130-170 per quintal showed a rise of about 8 per cent on account of good demand from Haryana, Punjab and Rajasthan. The current prices in this market are 19 per cent higher than the level a year ago.

Gur

In the Hapur market (Uttar Pradesh), the daily arrivals of gur were usually large at 5,000 maunds. During the period October 1970 to March 1971, gur arrivals aggregated 2.85 lakh quintals, against 2.14 lakh quintals during the corresponding period last year. Even with the larger-than-usual arrivals, the prices of gur (Pansera superior) in this market at Rs 73-75 per quintal showed a further sharp rise of 24 per cent on account of brisk demand from the southern States. The current prices in the market are about 60 per cent higher than the level a year ago.

Tea

No plucking of tea leaves was done in north-east India during February also. During February 1971, the production of tea in south India was lower at 6.2 million kg, against 6.6 million kg in February 1970. The production during January-February 1971 was also lower at 12.2 million kg, against 14.2 million kg in the corresponding months of 1970. In the Calcutta market, the average price of tea at Rs 309 per quintal showed a rise of about 45 per cent during March. The current price is lower by about 3 per cent than the level a year ago.

On March 25, the Chairman of the Tea Board, Mr B. R. Vohra, told at a press conference in Calcutta that the Tea Board's future promotional policy related to an all-out effort for stepping up the output of quality teas in north-east India and concentration on non-traditional markets such as Japan and Libya.

ANDHRA PRADESH

The food situation in this rice surplus State continued to be satisfactory in March. However, the prices of rice at the important marketing centres showed a seasonal uptrend in March. The marketing of summer groundnut has begun in the State. The high prices of cotton is compelling textile mills in the State to seek more financial assistance from the Reserve Bank as "try loans" on their finished goods and raw materials. The Food Corporation of India plans to construct one silo in the State to meet the growing needs for storage facilities for the foodgrains procured by it. The capacity of the silo would be 700 tonnes. The Union Government has issued letters of intent to United Auto Tractors of Hyderabad for the manufacture of tractors with foreign collaboration. On March 24, the State Assembly passed a bill to amend the ceiling on Agricultural Holdings Act, seeking among other things, the withdrawal of exemptions granted from the ceiling in respect of lands used as orchards, specialised dairy and cattle breeding farms, sugarcane farms maintained and operated by sugar factories and efficiently managed farms in compact blocks.

INDEX NUMBERS OF WHOLESALE PRICES

(Base: 1961-62=100)

**PRICES IN MARCH****Welcome phase of stability**

THE index number of wholesale prices (average) showed a seasonal fall of about 11 per cent in February. During the first two weeks of March, the prices forged ahead by 0.9 per cent. But, during the third week of March, the prices declined by 0.8 per cent. Though the official data on the prices are not available for the closing week of March, our study of commodity quotations for the week ended March 27, indicates that prices ruled easy. Thus, on balance, the average price level in March was about the same as in February. This phase of price stability is certainly welcome.

A more significant indication of the price movement is given by the fact that during the week ended March 20, 1971, the official index numbers of wholesale prices at 181.0 was only 2.7 per cent higher than the level a year ago. However, we should not feel complacent about the price level as the current

price index is still 10.3 per cent higher than the level two years ago, implying an average annual rate of inflation of about 5 per cent. It is unfortunate that during the current busy season so far (September 1970 to March 1971), prices have declined only by 0.8 per cent, against the declines of 3.2 per cent and 6.9 per cent during the preceding two busy seasons.

The near stability in recent weeks was the result of two opposite trends: (1) rise in prices of food articles and (2) fall in prices of industrial raw materials mainly in groundnut and cotton. It is significant to note that the prices of food articles and industrial raw materials, for the first time in recent months, are about at the same levels as a year ago. Money supply continues to increase at the ominous rate of 12 per cent per annum. Hence the price situation is to be regarded potentially none-too-satisfactory.

INDEX NUMBERS OF WHOLESALE PRICES

(Base: 1961-62=100)

ASSAM

For the cultivation of *rabi* foodgrains, the State is not important. Rice is the principal cereal in the State and the prices of rice were generally stable during March. As sowing operations of small millets, summer potatoes in hill areas, sugarcane, jute and mesta were in progress.

BIHAR

Harvesting of *rabi* foodgrains—wheat, barley and gram is almost completed. The output of these crops is expected to be satisfactory during 1970-71. The Agricultural Prices Commission has fixed a wheat procurement target of 50,000 tonnes for 1971-72 marketing season. The sowing of jute was in progress during March.

GOA

The overall food situation in this Union Territory continued to be satisfactory. The Government of Goa, Daman and Diu proposes to set up a cashew development corporation in the Union Territory. As a first step towards the eventual establishment of a cashew development corporation, an area of 720 hectares is expected to be covered by cashew plantation.

GUJARAT

During 1970-71, the State has produced of foodgrains in the State is expected to be at a record level of about 34 lakh tonnes against 32 lakh tonnes in 1969-70. The earlier peak production of foodgrains was 33.30 lakh tonnes in 1967-68. In Gujarat, new crop wheat has started flowing into the markets and is sold at the prices ranging from Rs 70 to Rs 75 per quintal. With further flow, the prices of wheat are likely to ease. The Government of Gujarat has decided to set up the proposed Agricultural University with its main campus and headquarters near the source of the Dantiwala canal and close to the dam in Banaskantha district. The State Government has taken a decision to withdraw the sales tax exemption for new oil mills coming up in the State for a period of five years.

HARYANA

During 1970-71, the State has produced a record level of *kharif* foodgrains production of 16.30 lakh tonnes, against only 9.16 lakh tonnes in 1969-70. The State has also harvested a bumper wheat crop during March. As a result, the Agricultural Prices Commission has fixed a higher wheat procurement target of 5.50 lakh tonnes for the 1971-72 marketing season, against the actual wheat procurement of 4.82 lakh tonnes during the 1970-71 marketing season.

HIMACHAL PRADESH

The State has harvested about 35 lakh tonnes of wheat during 1970-71, against three lakh tonnes in 1969-70. The aggregate output of foodgrains in the State is estimated at 11.50 lakh tonnes during 1970-71, against 10 lakh tonnes in 1969-70. The planting of sugarcane was in progress during March.

JAMMU AND KASHMIR

The share of this State in the production of *rabi* foodgrains in the country is insignificant. The State has harvested satisfactory *kharif* food crops and hence, the food situation was generally satisfac-

tory. The sowing of summer potatoes and the planting of sugarcane was in progress during March.

KERALA

The planting of sugarcane and sowing of tapioca was in progress during March. The State harvested summer rice and sweet potatoes during March. The State Government has extended financial assistance to the tune of Rs 10 lakhs to the State Cashew Corporation for taking over 12 cashew factories in various parts of the State. The State Government has decided to set up a bamboo corporation. The corporation, which will have its headquarters at Angamaly will function as a subsidiary of the Handicrafts Corporation.

MADHYA PRADESH

This surplus State in foodgrains, harvested a record level of rice crop of 36.46 lakh tonnes during 1970-71, against 32.25 lakh tonnes in 1969-70. The State has also harvested good *rabi* food crops. Reflecting this, the Agricultural Prices Commission has fixed a higher wheat procurement target of 50,000 tonnes for the 1971-72 marketing season, against the actual procurement of only 8,000 tonnes during the preceding marketing season. The planting of sugarcane was in progress during March.

MAHARASHTRA

Following the severe damage to crops owing to the drought, official sources estimate the paddy output at 19 lakh tonnes during 1970-71, against the normal yield of 31 lakh tonnes and cotton at seven lakh bales against the normal 15 lakh bales. As a result, the loss to crops in 21 out of the 26 districts has been estimated at Rs 160 crores. During March, the planting of sugarcane was in full swing in the State. Among scarcity works, preference had been given to productive schemes like soil conservation, minor irrigation and percolation tanks. The expenditure on relief works in the scarcity affected areas was estimated at Rs 33.90 crores, comprising of Rs 16.90 crores on relief measure works, Rs 5 crores on ordinary *tagai* loans, Rs 5 crores on loans for share capital to co-operative banks and Rs 7 crores on loans for fertilisers, seeds, etc.

MYSORE

During 1970-71, the production of foodgrains in the State is expected to be about 62 lakh tonnes, against about 59 lakh tonnes in 1969-70. On March 1, Mr G. Brunner, Consul-General for Switzerland in Bombay, delivered a gift of two well-drilled rigs to the Mysore Government. The use of rigs will enable to irrigate about 2,000 acres per annum, enough for two extra crops. The rigs will be operated in Koppal taluka in Raichur district.

NAGALAND

The State has harvested about 50,000 tonnes of rice during 1970-71. No *rabi* crops are grown in this State.

ORISSA

The share of *rabi* foodgrains in the State's overall foodgrains output is small. During 1970-71, the State is expected to produce about 20,000 tonnes of wheat and 15,000 tonnes of gram, against 19,000 tonnes and 14,000 tonnes, respectively, in 1969-70. The planting of sugarcane was in progress during March.

PUNJAB

According to official circles, the production of wheat during 1970-71 is expected to reach the last year's level of 48 lakh tonnes. No increase in the outturn of wheat this year is expected because of frequent cuts in power supplies for agricultural operations. The Agricultural Prices Commission has fixed a wheat procurement target of 25.50 lakh tonnes for the 1971-72 marketing season, against the actual procurement of 23.63 lakh tonnes in the 1970-71 marketing season. The World Bank has given its clearance to the Punjab Agro-Industries Corporation for inviting tenders for the import of 8,000 tractors under the World Bank credit agreement. Punjab National Bank, one of the nationalised banks, has agreed to advance Rs 50 crores for the procurement of wheat in the State. On March 24, the Punjab Cabinet took the decision to abolish land revenue on all agricultural holdings.

RAJASTHAN

The overall food production in the State during 1970-71 is expected to touch the record level of 76 lakh tonnes, against 47.32 lakh tonnes in 1969-70 and the previous peak level of 66.02 lakh tonnes achieved in 1967-68. Thus, the year 1970-71 has proved to be an exceptionally good year for agriculture in the State. The Agricultural Prices Commission has fixed the procurement target of 75,000 tonnes for wheat for the 1971-72 marketing season.

TAMIL NADU

During 1970-71, the aggregate production of foodgrains in the State is expected to be higher at 65 lakh tonnes, against 62.39 lakh tonnes in 1969-70. Sugar recovery in the State during January and February 1971 has been well over last year's average of 7.87 per cent. The 16 sugar mills in the State expect to close the season with an average recovery of around 8.3 per cent. On March 17, the State's Minister for Agriculture, Mr A. P. Dharmalingam said that the Union Government has sanctioned three small farmer's projects for Tamil Nadu. Each project is estimated to cost Rs 1.60 crores and would be implemented in blocks in South Arcot, Madurai and Tirunelveli districts. The Union Government has also sanctioned two schemes for the marginal farmers and agricultural labourers each costing about Rs one crore and would be implemented in Salem and North Arcot districts.

UTTAR PRADESH

Harvesting of wheat was in progress. During 1970-71, the output of *rabi* foodgrains in the State is expected to be higher at 10.5 million tonnes, against 10.0 million tonnes in the preceding year. The overall production of foodgrains in the State is expected to be higher than 17.5 million tonnes achieved in 1969-70. The Agricultural Prices Commission has fixed a wheat procurement target of 6.5 lakh tonnes for the 1971-72 marketing season.

WEST BENGAL

During 1970-71, the production of wheat in the State is expected to be 8.5 lakh tonnes, against only four lakh tonnes in 1969-70. This is a significant achievement as this State is traditionally a rice growing State. Only in 1967-68, the production of wheat in this State was only 71,000 tonnes. □

NOTES TO THE BALANCE SHEET AS AT 31st DECEMBER, 1970

BOMBAY, 5th April, 1970.

AMERICAN EXPRESS INTERNATIONAL BANKING CORPORATION

(Sd.) R. J. DAVIES

Resident Vice-President.

1. The Balance Sheet has been prepared in conformity with Form 'A' of the Third Schedule to the Banking Regulation Act, 1949.

2. No provision has been made in the Accounts for the present liability in respect of future payments of Gratuity under the Duesi Award, estimated to be Rs. 5,40,895—not of tax benefit (gross Rs. 18,32,893 less tax at 70 per cent).

There is also a voluntary pension scheme to which the employees may opt if they agree to forgo Gratuity. The amount of provision which is required to be made, if any, on this account has not been ascertained.

3. Inclusion in 'Advances' Rs. 25,81,92,661.54 is an amount of Rs. 7,95,422.05 due from a constituent who undertook to pay the amount in regular instalments effective from July, 1968. No amount was received until 31st December, 1969 but an amount of Rs. 1,55,703.22 was paid by the constituent during the year ended 31st December, 1970. The extent of the amount which may eventually be irrecoverable is not ascertainable at this stage and accordingly, no provision has been made in these accounts in this regard. The above amount of Rs. 7,95,422.05 has been classified as 'Debts considered

good secured by the personal liabilities of one or more parties in addition to the personal security of the debtors" in the Schedule of Particulars of Advances annexed to the Balance Sheet.

4. Guarantees include Rs. 1,30,000.00 being the amount of guarantees issued on behalf of the constituent referred to in Note 3, in respect of which certain claims have arisen. These claims are being disputed by the constituent and have been referred to a tribunal, the award of which is still pending. The extent of the Corporation's liability in this regard, is not ascertainable at this stage and accordingly no provision has been made in these accounts.

5. Certain bills received from constituents for collection on their behalf are entered in memorandum registers and are recorded in the financial ledgers only when collected. All bills for collection outstanding as at 31st December, 1970 have, however, been shown in the Balance Sheet under the relevant heads of Account.

6. In accordance with the instructions received from the Reserve Bank of India the assets and liabilities relating to Travel Department (including tax liability attributable thereto as estimated by the Corporation) have been shown under 'Other Assets' and 'Other Liabilities' respectively.

Particulars of Advances annexed to and forming part of the Balance Sheet as at 31st December, 1970

Resident Vice-President.

REPORT OF THE AUDITORS

We have audited the attached Balance Sheet of the Indian Branches of American Express International Banking Corporation as at 31st December, 1970, and also the attached Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the returns of the Calcutta Branch of the Bank and Central Money Pool, India, audited by other auditors and report that:—

- (1) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;
- (2) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books, and proper returns, adequate for the purposes of our audit have been received from the Calcutta Branch and Central Money Pool, India;
- (3) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of accounts and the audited returns;

(4) the report on the accounts of the Calcutta Branch and Central Money Pool, India, audited by other auditors has been forwarded to us and the same has been considered in preparing our report;

(5) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis, the said Balance Sheet subject to no provision having been made for (a) Gratuity (b) Advances, and (c) Claims in respect of Guarantees as indicated in notes (2), (3) and (4) gives a true and fair view of the state of affairs of the Indian Branches of the Bank as at 31st December, 1970, and the Profit and Loss Account gives a true and fair view of the Profit of the Indian Branches for the year ended on that date.

BOMBAY, 5th April, 1971.

EXPORT ANGLE

By Stevedore

Solvent extractors' worry

THE solvent extractors seem to be somewhat pessimistic about their exports during the current year. In particular they feel that the good groundnut crop during the current season may not mean higher exports of groundnut extractions. These exports normally earn us about Rs 50 crores per year. In 1970 the main buyers were East European countries (5 lakh tonnes), the United Kingdom (1.40 lakh tonnes) and Japan (1 lakh tonnes).

During the first quarter of the current calendar year shipments to the UK totalled 25,000 tonnes as against 52,000 tonnes in the corresponding period of last year. In the case of East European countries the buyers are not showing any particular interest. Some of them, according to Mr C. G. Kothari, President of the Solvent Extractors' Association of India, have stated that they have fully utilised the amount as fixed in the trade agreements with this country. Exports to Japan are still under negotiation though a delegation which has returned from that country is hopeful that exports would be resumed soon. The immediate worry with these exporters is caused by the fact that there are no buyers for April and May shipments.

The UK is generally a buyer for shipments from July to December, but the exporters find themselves in a difficult position because they are not sure of the quantum of freight that may be fixed by the Karmahom Conference which has already notified that there would be freight increases in July and October. Some relief has been announced by the conference lines in that the surcharge for imports and exports to be handled through London port has been reduced from 25 per cent to 15 per cent. But this will not mean a substantial concession. In fact, the existing freights are proving a burden and if they are to be increased further in July and October that could mean serious hurdles for the export of groundnut extractions which have to compete with goods from African countries. This is why Mr Kothari feels that their plans of exporting eight lakh tonnes of groundnut extractions during the current year may not be realised and that the actual exports might not even total seven lakh tonnes.

The Association is keen that the Government should give some sort of protection against freight increases. But such efforts in the past have yielded only limited results. The Association also wants the Government to increase the quota in the trade plans with the East European countries and permit them to buy more extractions. This plea is unlikely to be accepted by the Government. In fact, one of the major objectives behind the setting up of Groundnut Extractions Export Development Association (GEEEDA) was to ensure that exports to free currency areas were expanded. The Government has been giving all possible assistance to this organisation to fulfil this objective and New Delhi cannot be expected to suddenly reverse this policy. But the Government could profitably review the export duty of Rs 125 per tonne. A downward revision of this duty

could mean lesser rupee earnings from exports to the East European countries. But if it helps in increasing the shipments to the United Kingdom, other European countries and Japan, there could be net gain for us. □

Chances for hand tools

SOME recent inquiries received from the United States have encouraged export circles to believe that this country could emerge as an important exporter of hand tools. The United States has been for the past three or four years showing some interest in our hand tools, and shipments of hand tools, small tools and cutting tools to that market averaged about Rs 45 lakhs per year during the period 1967-68 to 1969-70. The total exports during these three years have ranged between Rs 2.15 crores and Rs 2.78 crores. It is estimated that exports during 1970-71 would be of the order of Rs 3 crores. The United States is reportedly finding Indian hand tools cheaper and the American parties concerned are also quite satisfied with the quality of the products. Exports at present consist mainly of jaw spanners, bi-hexagon spanners, pipe wrenches, screw drivers and water pump pliers. The countries which have been buying these tools include Holland, Sweden, the UK, USSR and West Germany besides the United States. □

Boost for jute?

THE intense fighting during the past few days in Bangla Desh is reported to have resulted in considerable damage to some of the jute mills as also to the jute fields. This could mean that there would be some divergence of jute goods business from Pakistan to this country. It would be difficult to hazard a guess as to the extent of this possible diversion since the picture in Bangla Desh is far from clear. But the advantage, if any, that the jute industry in this country can expect from a very unhappy situation in the neighbouring East Bengal could be only temporary unless the Government and industry take measures to improve the competitiveness of our jute goods.

Some suggestions have already been made in this connection by a survey team of the USAID. Its first recommendation was that a buffer stock of six lakh bales of raw jute and mesta be built up. But the Government found this proposal unworkable since there was not enough of production to build up such a buffer stock. Secondly, the team had suggested that the Government should review the export duty in consultation with the industry. But all that the Government has done is to say that this recommendation has been "noted". New Delhi has also dismissed as unnecessary the suggestion made by this team for the setting up of a jute bank to make available easy credit to the agricultural sector, the raw jute purchasing organisations, the manufacturing units for modernisation particularly for carding and to extend banking facilities and service to exporters of jute goods. In its opinion, the normal banking and other financial institutions will take care of this. In one particular respect, however, the Government

and the USAID team are fully agreed. The team had suggested that with a view to stabilising prices and bringing about more contacts between mills, shippers and importers, hessian should also be treated similarly to carpet backing and specialities. This meant that there should be direct sales from mills to customers and would involve closure of the hessian commodity market. The team was careful to say the implications of such a move should, therefore, be considered carefully by the Government and industry. Obviously New Delhi thinks this would be a healthy development. It has pointed out that many industrial houses have recently been setting up their own export divisions and as this tendency grows and direct contacts between the mills and the customers get established, the present structure of marketing is likely to lose its significance and the intermediaries would *ipso facto* lose their importance. □

Markets for potato seeds

FOLLOWING the success achieved in exporting luscious red and golden apples to the UK, Himachal Pradesh is trying for a breakthrough in seed potato export too. About 100 tonnes of seed potato, extensively grown in Mahasu district and other parts of the State, are now being exported to Bangkok and Kuwait through the State Trading Corporation. The State Small-scale Industries Corporation is striving to explore markets in other South-East Asian countries. Himachal Pradesh is at present supplying seed potato to almost all the potato-growing States in the country and also to Nepal.

The Himachal Pradesh Government exported in 1969 just 20 tonnes of red and golden apples to England. Encouraged by the demand the Government exported 100 tonnes of apples to England last year. The Government is now considering the export of apples to some Middle-East and South-East Asian countries during the next cropping season. Besides apples, the State Government has made a beginning in exporting apple juice, nectars and jams to the UK. Now some private parties in England have approached the State Government for the direct import of these products because of their reasonably good quality and low price.

Another important export item from the State is *sarsaon-ka-saag*, that is, mustard leaves. A private party in England has been importing this tinned and processed vegetable dish for the past couple of years. In view of the increased demand for this vegetable dish, the State Government is exploring possibilities of stepping up exports of *sarsaon-ka-saag* through the STC. Last year the State earned foreign exchange worth Rs 20 lakhs through the export of dried mushrooms grown in the higher reaches of the State. The State Government has decided to offer various incentives to the agriculturists and farmers growing these cash crops. These incentives will include low interest loans, scientific and technical know-how, quality control and a percentage of foreign exchange for importing machinery, seeds, fertilisers and other field and farm requirements.

Money

earns good,
safe interest in a
Lombard Bank
Deposit Account

A Bank Deposit Account with Lombard provides a good rate of interest, with absolute safety for your capital - leading to financial peace of mind.

7%

Deposits at 6 months' notice of withdrawal can earn 7% interest per annum, but you can withdraw up to £100 on demand during each calendar year. Interest is paid half-yearly without deduction of U.K. tax.

8 1/4%

Sums of £5,000 and over fixed for 12 months can earn a high rate of interest (currently 8 1/4%), paid without deduction of U.K. tax.

Your Deposit is supported by Capital and Reserves exceeding £14,000,000 and Lombard is a member of the National Westminster Bank Group whose Capital and Reserves exceed £344,000,000.

Opening an Account is simplicity itself, so write now to the General Manager for further details and a copy of Deposit Account Booklet No. AO.91.

HOSPET

Chairman, Mr Rajeshwara Patel's Speech

THE following is the Chairman's Speech at the 37th Annual General Meeting of the Company held at Hospet on 26th March, 1971:

DEAR SHAREHOLDERS,

I have great pleasure in welcoming you all to the 37th Annual General Meeting of the Company. The Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1970 have been with you for some time past and with your permission I shall take them as read.

Since we met last, there has been far-reaching changes in the political situation of the country. What looked from outside a mere ripple in the undivided congress session of Bangalore on the eve of the election of the President of India soon triggered off into a battle royal for winning 'Presidentship'—splitting of the congress party in parliament—loss of majority of the ruling party—increasing dependence of the Government on leftists communists and regional parties ultimately resulting in the dissolution of Lok Sabha and consequent mid-term poll. In the meantime, while the Prime Minister through various measures and slogans projected an image of progressivism and an ardent champion of the backward sections of the community including the minorities; the unsocial elements and fire-eating leftists resorted to the cult of knife and bombs, killing indiscriminately, creating all-round chaotic condition in various parts of the country; and to add to the prevailing confusion communal bodies, regional organisations once again raised their ugly heads. Charges and counter-charges were freely and openly being bandied by opposing parties through press and other media. It was under these circumstances when the integrity of the country, its peaceful existence and orderly progress all seemed threatened both from inside and outside that the country went to polls.

People's verdict at the polls is total. The Harijans, Girijans and minority communities, which nearly *en-bloc* voted against Indian National Congress in 1967 elections and brought down its majority to a bare minimum, in this mid-term poll, in the absence of an identifiable alternate leadership felt attracted to the New Congress, its new look and its profession of a fair deal. They have at once freed the new Government of the pressure of the ultra-left, the vested interests and the parochial interests. The responsibility of the Prime Minister to make good is indeed a colossal one! The coming months are expected to witness the unfolding of plans and priorities which will pull the country out of its stagnation in 80 per cent of India which is rural, establish with a firm hand peace in Industrial Sector and make for progressive liquidation of the scourge of unemployment.

We are meeting here today on the eve of a new era of hope for the people of this unfortunate country. During the

last quarter of a century of its existence as a free nation, it had a very chequered career. At the very start we bid good-bye to earlier-held concepts of Gandhijee for reorganising our country's progress in social, material and moral fields. Instead we tried to ape the West and virtually became un-Indian. We lost our identity—our culture—our heritage in the process.

The freedom-fighters had dreamt of not only winning back the place of Pride India once rightly occupied but fervently hoped to show in all humility this tormented world the path to real peace and happiness for the world community as a whole. And where do we find ourselves today? Can we make a fresh start? Will the Prime Minister of India choose the right priorities? Shall we be able to put villages before cities? Can we persuade ourselves to help build happy homes of honest workers fully employed and forget running about gigantic and so called prestigious ventures at least till we have organised infrastructure for the progress of villages and villagers.

Now, before coming to the actual business of this afternoon, I wish to place before you the various problems facing the sugar industry in the country. While the threat of nationalisation has receded on account of the appointment of High Power Committee to go into the matter, the industry is today confronted with many other pressing problems which has threatened closure of certain units particularly in the States of U.P., Bihar and Tamil Nadu. The current crushing season started with an all-time record carry-over-stock of 20.88 lakh tonnes as against 13 lakh tonnes last year. The current year's production is expected to be in the neighbourhood of 40 lakh tonnes with a consumption level at 36 lakh tonnes and export of 3.5 lakh tonnes. The industry will again carry forward about 22 lakh tonnes of sugar for the next season. With this prospect of huge carry over and the Governments disinclination to create buffer stock, the industry is plagued with problems of heavy interest charges on their Cash Credit Account which is eroding away the miserly profit margin provided in the levy price of sugar. The over production and the liberal release of free sugar have kept the free market in a perpetual depressing state and most of the factories have to sell their free sugar at below cost price. Added to these, the Government's credit squeeze policy has created further operational difficulties for the industry which is already limping on account of its uneconomic working. Although the Government is aware of the present problems of the industry, political considerations have prevented Government from taking any remedial measures. With the political climate now settling down, it is hoped that the Food Ministry will give a close look to the various problems of the industry and formulate a scientific and rational crash programme to pull it out of its present predicament. It would do well for the

Ministry to keep in mind the great importance of Sugar Industry to the economy of the country. This is the top largest agro-based industry and second largest among the manufacturing industries employing 2.5 lakh persons with a wage bill of Rs 50 crores—supporting about 20 million cultivators and producing sugar worth 600 crores of rupees. The industry contributes roughly about 200 crores by way of excise duty, cane cess and other taxes—earns foreign exchange to the tune of 15 crores besides producing important by-products which sustains chemical and other industries.

You would observe from the accounts that the performance of the company during the year is rather discouraging. You will recall that last year in my speech I had struck a pessimistic note about this year's working because of certain adverse factors prevailing at that time. The poor working results are mainly due to the considerable fall in the overall recovery of sugar and a very low and uneconomic price fixed for the levy sugar by the Central Government. The cost of production was unduly increased due to heavy interest charges which we have to pay on the accumulated stocks. Free market sugar prices also ruled very low during the period. All these factors have contributed to the bad working results of the season. This has been the feature not only of our factory, but of many other factories in the country. Under these circumstances, I regret that your Directors once again have to deprive you of the dividend on your shares.

I may point out here that at the beginning of the season 1969-70, there was not much of a disparity in the quantity of stocks held by different factories in the various zones. However, the position at the end of the season showed an entirely different picture. Not only were there wide disparities between the stocks held by different zones, but such disparities existed between factories in the same zone. This disparity has been progressively accentuated during the current season. I am informed that even today we are holding a stock of 59,537 bags of 1969-70 production. The interest charges paid by the company during the season 1969-70 works out to Rs 7.29 per quintal.

The Indian Sugar Mills Association has strongly urged the Government to see that the factories are adequately compensated on this account in the 1970-71 levy price and also to adjust the policy of release so as to reduce the existing disparities of stocks. The Sugar Directorate seems to be taking a very casual interest in the problems of the sugar industry or else what justification could the Government have in directing the sugar factories to implement the recommendations of the Second Wage Board retrospective from November 1969, and then deny the increased incidence of cost in the price of levy sugar? The industry cannot indefinitely go on absorbing the higher production cost and continuously eroding the meagre margin provided by the rigid cost schedule, the sanctity of which has been regarded almost as an article of faith by the Sugar Directorate. Even now, it is not too late for the Government to objectively examine the various submissions put forth by the sugar industry and do justice in the larger interest of the industry and the cane growers.

The current year's working results are so far quite satisfactory. We started the season on 5-11-1970 and till now we have crushed 1,66,000 tonnes with a recovery of 9.93 per cent, which is much better than last year. We have yet about 60,000 tonnes of cane to crush and the final working results would depend on how the recovery behaves during the remaining period. The overall cost of production during this season is more due to higher wages paid as per the recommendation of the Second Wage Board, high price of gunnies and other stores material and heavy interest charges on the accumulated stocks of sugar. The industry is looking forward with great hope to the revised levy price of sugar which is expected to be announced and we hope that the new levy price will take full care of all the increased elements in the cost of production.

I am happy to inform you that during the year, the distillery working has been satisfactory. There have been sizeable improvement both in total production and recovery of alcohol per tonne of molasses. There is also an increase in the offtake of our liquors in the Civilian and Defence markets. We are looking forward to successfully develop certain overseas markets for our liquors. Samples of our Rum have been sent to U.S.A., Canada and West Germany. I am happy to inform you that our liquor brands have been approved by the Indian Standards Institution for ISI marking, as they conform to ISI Standard and our Rectified Spirit is recognised as grade I of ISI Standard by the Indian Standards Institution, New Delhi.

In my last year's speech, mention was made about expansion of the crushing capacity of the factory from 1,250 tonnes of cane to 1,500 tonnes of cane per day. Steps for the implementation of the expansion scheme have been taken and orders have been placed with various machinery manufacturers.

Mention was made in my last year's report about the appointment of Shri M. R. Morarka as Managing Director of the Company for a period of five years from 1-4-1970. I am pleased to convey that we have received the approval of the Company Law Board for this appointment.

Shri M. V. Veerappa, a Director of the Mysore State Financial Corporation has joined our Board from 12-2-1971.

Now, it is my pleasant duty to thank our colleagues in the Board for all their co-operation and guidance they have been giving. I shall be failing in my duty if I were not to convey to you that the relationship and team spirit of officers and workers have been very cordial.

Lastly, I have to thank you all, shareholders, for your continued support and the confidence reposed in us in all our ventures, and now with your permission I formally move for adoption of the Directors' Report and the Balance Sheet and Profit and Loss Account.

Rajeshwara Patel
Chairman

(This does not purport to be a record of the proceedings of the Annual General Meeting.)

ARE THE VERITABLE 'FIRE-EATERS' IN CHEMICAL TECHNOLOGY

We have the capacity for taking on challenges in the manufacture of Process Chemicals for Industries.

AHURA is a research-oriented organisation. Its forte lies in its recognition of updating its research facilities to the immediate and future needs of Industries and thus be in a position to serve them in keeping with their requirements.

The name "AHURA" has become synonymous with the manufacture of Process Chemicals and today serves many industries, chiefly among them the Textile Industry.

AHURA are regarded as pioneers in the manufacture of Process Chemicals for Textiles and their facilities are increasingly used by the many branches of the Textile Industry throughout the country.

EXPANSION CONTINUES

Dunlop India fares well

DUNLOP India Ltd (Managing Director, Mr R. G. S. Nairn, Calcutta) has improved its sales for the year ended December 31, 1970 to Rs 87.7 crores from Rs 81.3 crores in the previous year. The gross profit increased to Rs 8.3 crores from Rs 8.1 crores. The net profit, after depreciation and taxation, amounted to Rs 4 crores (Rs 4.1 crores). The ordinary dividend was maintained at 20 per cent.

The company's gross profit margin works out to 9.5 per cent against 10 per cent. The ratio of net profit to net worth comes to 18.2 per cent (20.6 per cent).

The capital expenditure incurred during the year was Rs 3.20 crores (Rs 2.44 crores). In addition, commitments for capital expenditure at December 31, 1970 amounted to Rs 5.67 crores. Expenditure in 1970 includes the implementation of an industrial licence received in December 1967 to increase the company's automotive tyre and tube capacity by 135,600 units and 124,800 units per annum respectively. Also included are commitments made against a further industrial licence received in December 1969 for the manufacture of an additional 2.5 lakh automotive tyres and tubes per annum and a capital goods

During the year under review, production of automotive tyres and tubes at the Sahaganj factory remained at nearly the same level as in the previous year, although output of cycle tyres was lower. Production at the Ambattur (Madras) factory was, however, remarkably higher due to the completion of a part of expansion programmes. The implementation of the expansion licence for an additional 2.5 lakh automotive tyres and tubes at Ambattur is proceeding satisfactorily and the additional capacity will be fully effective in 1972. Production of bicycle rims, was seriously affected by the overall shortage of steel in the country. Import licences were obtained but supplies of imported steel will only become available in the current year.

During the year under review, Dunlop sales of automotive tyres and tubes were higher than in the previous year particularly to vehicle manufacturers and for defence. Sales of industrial products were also higher than in the previous year. A notable achievement was the signing of a contract valued at Rs 1.50 crores for the supply of special cotton/nylon conveyor belting to the Neyveli Lignite Corporation.

Exports in the year reached Rs 3 crores (Rs 2.8 crores). In the face of keen international competition this achievement was made possible by the development of new markets, continuous market research, the introduction of special types of tyres for bicycles and earthmoving machines and two new types of bicycle rims and the continuous assistance the company receives from its UK associates and their worldwide distribution organisation.

The major part of the expenditure incurred, and to be incurred, on the current expansion plans will be met from the company's own resources. However, additional finance of approximately Rs 2 crores will be required. In order to raise this amount, the company has submitted an application to the Controller of Capital Issues for the issue of 15 lakh ordinary shares at a premium of Rs 4 per share to the shareholders in the ratio of three new ordinary shares for every 20 ordinary shares held. Subject to the consent of the Controller of Capital Issues, the proceeds of the proposed issue will be Rs 2.1 crores, of which Rs 1.04 crores, being the amount payable by Dunlop Holdings Ltd, UK, will be met by set-off against the sterling loans made available by them.

State Bank of Patiala

INTEREST and discount earned by State Bank of Patiala (General Manager: K. Subramanian, Patiala) for the year ended December 31, 1970 have increased to Rs 3.3 crores from Rs 2.5 crores in the previous year. The net profit was Rs 2.89 lakhs

(Rs 3.73 lakhs). The dividend has been maintained at 5 per cent.

Deposits of the bank expanded to Rs 59.4 crores from Rs 55.4 crores. Advances rose to Rs 41.7 crores from Rs 37.1 crores. Investments were higher at Rs 17 crores (Rs 14.4 crores). The ratio of advances to deposits increased to 70.1 per cent from 66.9 per cent and that of investments to deposits rose to 28.6 per cent from 26 per cent.

The liberalised scheme introduced by the bank for providing agricultural finance to small farmers or groups of farmers engaged in such activities as animal husbandry, cottage industries etc was further intensified. Advances were given mostly under the "village adoption" scheme. Under these new schemes, the bank financed 3,998 farmers as on December 31, 1970 with limits totalling Rs 3.67 crores (outstandings Rs 2.81 crores).

The total credit facilities granted by the bank to small-scale industries stood at Rs 6.87 crores in terms of limits with out-

licence received in July 1969 for the manufacture of an additional 1.5 million cycle rims per annum. It is expected that these two projects will be fully implemented by the middle of 1972.

The company's foreign exchange requirements for its expansion plans are being provided partly by the Government of India out of credits and loans obtained from the UK, West Germany and France and partly by sterling loans from Dunlop Holdings Ltd, UK.

The profit and loss account of the company includes Rs 22.94 lakhs received by way of managerial remuneration. With the abolition of the managing agency system, this source of revenue will no longer be available to the company. Although efforts have already been made to intensify the other operations of the company, it will take time to recoup this considerable loss of revenue.

WHY International Airlines Choose *Standard* ELECTRIC TRACTORS?

Air-India, BOAC and I. A. C. have selected STANDARD Electric Tractors for use at Bombay's Santa Cruz Airport. And here is WHY:

■ Lower Operating costs

Direct material handling costs reduced by 20% to 90%. Maintenance costs too are negligible.

■ High performance:

It operates in one electrical charge for a whole working day under normal conditions. No noise. No fumes either.

■ Longer life:

The estimated life is over a decade—75% more than that of an I. C. engine truck.

■ Special features:

Easy manoeuvrability—strong and sturdy construction—Powered by Standard TPg Traction batteries. 3000 kg. haulage capacity.

TPg TRACTION BATTERIES exclusively manufactured by Standard Batteries Ltd., are the largest selling batteries, for use in battery powered vehicles in India.

Rs 90.78 lakhs in the previous year to Rs 22.75 lakhs in the year under review. As a result of higher provision for depreciation and taxation, the net profit declined to Rs 29 lakhs from Rs 52 lakhs. Despite lower profit, the dividend has been stepped up to 8 per cent from 6 per cent. The company's gross profit margin works out to 16.5 per cent against 24.6 per cent. The ratio of net profit to net worth comes to 11.3 per cent (22 per cent).

During the year under review, production of Cummins engines has gone up by almost 50 per cent over that of the previous year. In view of the excellent export performance of the company at a little over 20 per cent of its total production, the Engineering Export Promotion Council has recently awarded a medal of distinction and a certificate of merit recognising the company as the foremost diesel engine exporter from India.

The company's subsidiary, Cummins Diesel Sales and Service (India) Ltd has

continued to perform well. Due to increased selling expenses, the gross profits have gone down and consequently no dividend was declared by the subsidiary for its accounting year, ended June 30, 1970. Financial guarantee extended by Kirlskar Cummins to accommodate the subsidiary's bank advances continued. □

Bajaj-Tempo

BAJAJ-TEMPO Ltd (Chairman: Mr W. F. Knoedler, Poona) had higher sales for the year ended September 30, 1970 at Rs 5.4 crores against Rs 3.3 crores in the previous year. The gross profit was Rs 58 lakhs (Rs 38 lakhs). The net profit, after depreciation and taxation, amounted to Rs 39 lakhs (Rs 10 lakhs). The dividend has been doubled to 10 per cent from 5 per cent.

The company's gross profit margin works out to 10.7 per cent against 11.8 per cent. The ratio of net profit to net worth comes to 21.6 per cent (8.1 per cent).

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

TATA CHEMICALS LIMITED

In the market

Southern Trawling

SOUTHERN Trawling Co Ltd (Registered Office: 19/2, Cunningham Crescent Road, Bangalore) is offering for public subscription at par 11,000 ordinary shares of Rs 100 each of the total value of Rs 11 lakhs. The entire issue has been underwritten. The subscription list which opened on April 7 will close on April 16 or earlier at the discretion of the directors but not before April 13. Application for shares must be for a minimum of five ordinary shares or multiples thereof. An amount of Rs 25 per share is payable on application, Rs 25 on allotment and the balance in two calls of Rs 25 each.

The company was incorporated on July 18, 1969. The main object is to undertake fishing operations with the aid of medium-sized mechanised boats. The factory will be located at Hosabettu village in Mangalore. The first batch of boats is expected by July 1971. The company has already commenced its activities by arrangement with other factories and has exported frozen shrimps valued at US\$21,642. A further order valued at US\$50,000 is pending to be executed.

During the year under review, the production reached very near the sanctioned capacity. The company has submitted an application for the expansion of its manufacturing capacity to 12,000 vehicles and 6,000 diesel engines for other uses. During the year exports of vehicles and spare parts to Ceylon and the UAR totalled Rs 10.24 lakhs. There were enquiries from

Aruna Sugars

The profit and loss account of the Aruna Sugars Ltd, Madras, for the year ended September 30, 1970 shows a net

loss of Rs 7,41,883 which has been arrived at after providing Rs 10,13,239 for depreciation on straight line method. The surplus brought forward from previous year is only Rs 31,866. A total sum of Rs 14,70,057 has been transferred from the dividend equalisation reserve (Rs 6,00,000), tax provision not required written back (Rs 4,70,057) and the general reserve (Rs 4,00,000) to cover the loss and to pay dividend on preference shares for the year 1970 (Rs 1,19,983) and the dividend on equity shares at 7½ per cent for the year 1970 (Rs 6,14,532). The surplus to be carried forward to the next year is Rs 25,525. The general reserve and the development rebate reserve stand at Rs 5 lakhs and Rs 22.50 lakhs, respectively.

As on September 30, 1970, the paid-up capital of the company stands at Rs 1,02,82,062. The company has got its loan arrangements revised by vacating the charge of the Indian Bank on the block assets of the company on the full payment of Rs 750 lakhs, by reducing the mortgage rights of the Tamil Nadu Industrial Investment Corporation Ltd on the block assets of the company to Rs 25 lakhs only and by creating an equitable mortgage to the extent of Rs 60 lakhs (fresh loan of Rs 40 lakhs plus the balance of Rs 20 lakhs taken over by the Bank) in favour of Punjab National Bank.

Carew and Co

Sales of Carew & Co Ltd, Calcutta, for the year ended September 30, 1970 have increased to Rs 353 crores from Rs 314 crores in the previous year. The net profit, after providing Rs 9.18 lakhs (Rs 7.24 lakhs) for depreciation, amounted to Rs 3.21 lakhs (loss of Rs 1.65 lakhs). The development rebate reserve claimed Rs 1.51 lakhs (Rs 3.03 lakhs). The general reserve got Rs 1.02 lakhs (nil). The ordinary dividend for the year was skipped. During the year under review 1.66 lakh (1.08 lakh) tonnes of cane were crushed, and 1.34 lakh bags of sugar were produced with an average recovery of 8.04 (8.85), per cent. The statutory minimum price for cane continued at Rs 737 per quintal. There was an improvement in the supply of molasses to the Asansol distillery as a result of which it was possible to maintain the production at a satisfactory level all through the year. During the year under review, there was some improvement in the sales of Rosa distillery as suitable measures had been taken to meet the competition from sub-standard products in the market.

Sendra Coal

The Sendra Coal Co Ltd, Calcutta, has earned a net profit of Rs 1.38 lakhs for the year ended December 31, 1970 against Rs 87,054 in the previous year after providing Rs 90,829 (Rs 75,893) for taxation. The ordinary dividend has been maintained at 7 per cent. The company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of Rs 9 lakhs 7½ per cent debentures in Bird and Co (Private) Ltd. The total market value of quoted investments on December 31, 1970 amounted to Rs 6.04 lakhs.

Hindustan Construction

The Hindustan Construction Co Ltd, Bombay, is offering for public subscription 6.3 lakhs ordinary shares of Rs 10 each at Rs 15 per share (includes a premium of Rs 5

DEVELOPMENTS IN THE EAST

BALLARPUR PAPER AND STRAW BOARD MILLS LTD.

Thapar House, 124 Janpath, New Delhi

SEK/1-240

Golden Tobacco Co., Private Ltd.

has been converted into a Public Company
and the name of the Company has been changed to

GOLDEN TOBACCO COMPANY LIMITED

with effect from March 15, 1971.

Tobacco House, Vile Parle, BOMBAY-56

per share) of the total value of Rs 94.5 lakhs, in order to admit the ordinary shares of the company to cash dealings on the Bombay Stock Exchange. The application list for the shares now offered for sale will open on April 14 and will close on April 23 or earlier but not before April 17. The full amount of Rs 15 per share is payable on application. The company was established in Bombay in 1926 as a private company and was converted into a public company in 1939. It carries out heavy construction contracts of all types. It has on hand, at present, about 35 projects spread all over India. The value of the outstanding works to be executed as on July 31, 1970 was about Rs 64 crores. Since August 1970, the company has secured further new contracts of the value of over Rs 3 crores. For the year ended July 31, 1970 the company has paid dividend on ordinary shares at 12 per cent. The shares now offered will be eligible for dividend that may be declared for the year ending July 31, 1971 and thereafter.

Preliminaries

Philips India

Sales of Philips India Ltd, Calcutta, for the year ended December 31, 1970 have increased to Rs 37.68 crores from Rs 30.20 crores in the previous year. The net profit, after providing Rs 1.10 crores (Rs 0.91 crore) for depreciation and Rs 4.25 crores (Rs 3.40 crores) for taxation, amounted to Rs 2.47 crores (Rs 1.87 crores). The dividend recommended is 20 per cent (23 per cent) and is payable on the increased ordinary capital of Rs 5.46 crores. During the year under review, the paid-up capital was raised from Rs 3.64 crores to Rs 5.46 crores by the issue of bonus shares in the ratio of 1:2. The dividend will absorb Rs 1.1 crores (0.84 crores). An amount of Rs 20 lakhs (Rs 20 lakhs) has been provided for the development rebate reserve and Rs 10 lakhs (Rs 10 lakhs) for the debenture redemption reserve.

EQUITIES

THE WEEK'S PRICE RANGE

Dull trading

BOMBAY, April 6

ACTIVITY on the stock exchange during the week was restricted to a few selected scrips but the trend was fairly steady. The market will remain dull until such time as some hints about the Budget become available. A depressing factor, however, was the statement of the Foreign Trade Minister, Mr L. N. Mishra, that the Government proposed to make textile mills produce more coarse cloth than now and that the penalty for exemption would be raised. This will put the textile industry, already harassed by rising cotton prices, in an even more difficult position. Whether more coarse cloth or higher penalty, the industry will have to increase the prices of the higher varieties in order to set its earnings right but it is doubtful whether this will prove feasible. Mills have reportedly moved the Government but what the latter is going to do is anybody's guess.

It is because of this uncertainty that the investors were rather shy of textile shares. Towards the end of the week Century was a bit shaky and shed a few points. All the same the market, not only in textiles but as a whole remained fairly steady. The factor which helped sentiment was the Prime Minister's statement that production would be maximised and investment increased both in the public and private sectors. The presumption therefore was that while taxation would not be heavy, the corporate sector might be offered some incentives.

Rayons were quiet to steady with National maintained at a steady level. Century Enka was marked down to Rs 330 although it was generally believed that the company would make its maiden dividend. The scrip, however, rallied on replacement buying. ABC, Mico, Cafi and Nocil were fairly active.

Corporate reports continued to be satisfactory. Antifriction Bearings has improved upon its 1969 results and has proposed a 2 per cent rise in the dividend at 12 per cent for 1970. Modella Woollens has also stepped up the dividend from 7.5 per cent for 1969 to 10 per cent (proposed) for last year. The company had paid only 5 per cent in 1968. Delhi Cloth has received the Government's sanction for its 4:5 bonus issues.

Steels maintained a steady tone with Tata mentioned at Rs 101 and Indian Iron at Rs 11.50. Telco held its ground while Voltas attracted fresh inquiry. Chemicals were listless. Money was a bit easy with the call rate at 10 per cent. □

Spot cotton moves down

BOMBAY, April 6

A pronounced sagging trend in prices was noticed in the cotton market during the past week. Mills were reluctant buyers in a declining market. The continued tight money conditions remained an added deterrent. The sentiment was also influenced, to some extent, by the apprehensions about the Government socialistic policy in regard to textiles, with the accent on the augmentation of the production of Jamata type of cloth.

The decline was particularly marked in the case of Maharashtra cotton, some of which, like Berar AK, suffered a sharp setback in price. It is precisely to stem the rot that the Maharashtra Apex Co-operative Marketing Federation has been extending sporadic support during the last few days. The Federation has, in fact, opened 11 new cotton purchasing centres for arresting the price rise in Akola, Akot, Yeotmal, Ghatji, Vani, Arvi, Sillod, Hingoli, Khedi and Jalna. Although most of the stocks with the growers had already been sold, it would seem that there were some unsold stocks with the growers in Vidarbha and Marathwada. According to Mr M. J. Mohite, the State Minister for Co-operation, the stocks in Vidarbha, yet to be disposed off, amounted to one lakh bales and in Marathwada about 15,000 bales.

The following has been the trend of prices of some of the leading varieties.

	(Rs per candy)	For the week ended April 6	For the week ended March 31
Khandesh ..	2,500-2,700	2,725	
Berar AK ..	2,100-2,200	2,250	
Digvijay Dabhoi ..	3,000	3,000-3,025	
Berar L 147 ..	2,400-2,700	2,750-2,800	
Kalyan 797 ..	2,125	2,300-2,325	
Manavadar CO2 ..	2,700	2,825	

In the import section, interest was confined to stray lots of American cotton, the negotiations for which had been recently finalised. The Cotton Corporation of India had been busy issuing tenders calling for offers of cotton as well as staple fibre. Under the agreement signed in New Delhi between India and Russia on Monday, India will receive 20,000 tonnes of raw cotton per annum (a little over 1 lakh bales) from the Soviet Union. The cotton will be used to manufacture textiles, to be re-exported to Russia. Total imports during the current season as on March 6 amounted to 162,373 bales against 378,802 bales in the corresponding period last year.

Raw cotton registered for export during the season, as on March 23, is placed at 118,348 bales of which 87,914 bales were passed for shipment as against 180,632 bales and 119,743 bales respectively, during the corresponding period last year.

YARNS SUBDUED

BOMBAY, April 6

A dull and drab sentiment continued to prevail in the yarns market during the past week also. The turnover was restricted. Art silk yarns lost further ground during the week due to improved supply and the reduced offtake from upcountry interests. The consumers expect a cut in the rayon prices following rumours that the Tariff Commission's recommendations would be implemented soon. Staple fibre yarns also continued to be subdued. Cotton yarns were steady.

In the art silk yarns section, 150D National Rayon shed nine paise to Rs 17.02. 120D receded by 35 paise to Rs 18.94. 150D

Bright Century lost 20 paise to Rs 16.60 and 120D 26 paise to Rs 18.74. 100D Bright South India eased by 13 paise to Rs 23.02. Staple fibre yarns (2x34 nF) spot Kiran was a shade lower at Rs 11.57 against Rs 11.57 a week ago.

OILSEEDS DIVERGENT

BOMBAY, April 3

The trend in the oilseeds market was divergent. The undertone in groundnuts and groundnut oil was rather bearish and in view of the heavy arrivals of the summer crop seeds at the terminal centres of the South, there is no likelihood of the prices improving in the near future.

Arrivals at the regulated markets of North and South Arcot districts in Madras were estimated at 15,000 bags a day. Buyers were not very keen and with the reported clearance of PL 480 soyabean oil, vanaspathi interests are not eager to rush to the market.

The outlook for groundnut extractions does not seem bright. The UK has not been showing much interest and the quotation was around 1.45. East European countries have exhausted their quota and their quotations are rather low. No fresh business is expected from these markets for the time being.

Japan has become a difficult customer after the aflatoxin scare. Saurashtra is reported to be having on its hands about 50,000 to 60,000 tonnes of unsold extractions.

Castor has maintained a steady tone and no tenders have been made so far in the medium contracts. Tenders in linseed have totalled 300 tonnes. The prospects for tenders in cotton seed meal as the spot material is fetching a high premium.

Comparative prices in rupees were.

FOODGRAINS EASY

BOMBAY, April 5

An easy trend in foodgrains prices prevailed in the local foodgrains market during the week under review. Among coarse grains, the prices of bajra (superior) declined by Rs 2 to Rs 60-70 per quintal on account of poor demand. The daily arrivals were placed only 160 bags. However, the city stock was estimated at around 60,000 bags. Maize at Rs 62-63 per quintal remained unchanged during the week. Activity in maize was limited. The inflow was normal around 170 bags a day. In pulses, gram (Punjab) receded by Rs 4 to Rs 80-81 per quintal, due to heavy arrivals. Urad (Khandesh new) at Rs 148-152 per quintal showed a modest fall of Rs 3 owing to slack demand. The activity in urad was moderate. Tur (Berar white) also declined by Rs 2 to Rs 110-113 per quintal. This was attributed to good supplies in the face of poor demand and discouraging up-

country advices. Moong (Chinai) at Rs 170-200 per quintal, remained steady. The activity in moong was moderate and the city stock was placed at around 15,000 bags.

SUGAR STEADY

BOMBAY, April 5

The prices of sugar (C-30) at Rs 188-190 per quintal remained steady in the local sugar market during the past week. The current prices of sugar are higher by about Rs 10 than the level a year ago. Arrivals and off-take were more or less same at 1,000 bags. Today, about 4,000 bags of 'D' grade sugar were sold by the co-operative sugar factories at a higher rate of Rs 181 per quintal with ex-mill duty.

KIPS FIRM

MADRAS, April 3

The tempo of inquiries for hides and skins was sustained in the past week. Prices were held firm at both buying and selling ends. The demand centred on lower selections in light cow hides, and buff calf, and all grades of cow calf. Available offers were placed in moderate quantities. The importers were willing to pay slightly increased prices for lower selections. The trading in goat skins was poor. Prime sheep skins ruled very firm. There was selective sales in wool sheep while market class remained weak.

SILVER UP, GOLD EASY

BOMBAY, April 6

A divergent trend characterised trading in the bullion market during the past week. Silver gained further ground following restricted arrivals in the wake of improved demand especially from upcountry centres. Gold shed its earlier gains and closed the week on a distinctly easier tone. The increased arrivals and the weak overseas advices imparted weakness. Sovereign was fully steady at last week's levels.

Silver (996 fineness) opened at last week's closing level of Rs 585 and slightly improved in the following sessions. It wound up the week at Rs 586.50 today, the net gain over the week being Rs 1.50. The weekly delivery was mentioned at between Rs 585 and Rs 581. The weekly average arrivals and offtake aggregated 28 bars and 16 bars, respectively.

Primary gold in unofficial trading commenced Rs 2 lower at Rs 183 and remained at that level in the following sessions. It closed the week at Rs 182 today, with a net loss of Rs 3 over the week. Standard gold in official trading began a rupee lower at Rs 192 and receded further and closed the week at Rs 192.50 today with a net loss of a rupee over the week. Sovereign was fully maintained at Rs 174.

MONEY STRINGENT

BOMBAY, April 6

Stringent conditions continued to prevail in Bombay's short-term money market during the past week. The inter-bank call rate was 10 per cent. In Calcutta, renewals were done at 10 per cent.

During the week ended March 26, foreign exchange reserves of the Reserve Bank of India declined by Rs 20.07 crores to Rs 350.43 crores. While foreign securities rose by Rs 5 crores to Rs 273.42 crores, balances held abroad came down by Rs 25.07 crores to Rs 77.01 crores. Notes in circulation declined by Rs 43.54 crores to Rs 4,211.77 crores. Loans and advances to scheduled commercial banks came down to Rs 368.37 crores from Rs 442.82 crores.

Week ended March 26, recorded a rise of Rs 9.70 crores at Rs 4,673.66 crores in the total credit made available by scheduled commercial banks. Borrowings from Reserve Bank came down to Rs 368.37 crores from Rs 442.82 crores.

READY REFERENCER & GUIDE TO COMPANIES ACT

How Tatas help you all the time to live better

Sometimes it is interesting to take a look at things — a new sort of look, that makes you see them differently. For instance, look at the things around you that work by electricity.

The ceiling fan that keeps you cool ... the street lamp just outside that guides you safely home at night ... the mill that makes the cloth you wear ... the radio that keeps you in touch with the world.

You can easily think of more things. But you will agree, life would have been dull and difficult without them ... without electricity.

For half a century Tatas have been serving you and industry with this low-cost power. And every time you press a switch ...

Someone at Tatas is working for you

AIR-INDIA

announces

a drastic reduction in fares!*

Air India offers heavy reductions under our Affinity Group Travel Scheme. For many sectors, the reduction amounts to over Rs. 2000/-.

What is an affinity group?

It is an association that has been in existence for 6 months prior to travel with a common objective or activity other than travel. In case of travel to the Americas the association must be of at least two years standing.

Examples. Educational institutions like schools or colleges of Arts, Music, Science, Engineering, Medicine, Catering; professional groups like associations of lawyers, physicians, surgeons, pathologists, teachers, artists, clubs like Lions

and the Rotary Club, sports associations, gym-khanas, choirs, dramatic and musical groups etc.

Minimum requirements:

If you are a member of any of the above affinity groups for a minimum period of 6 months prior to travel you may be entitled to the reduction. You have to travel together throughout your journey and your group should not be smaller than 15 persons.

Besides the large reduction under our Affinity Group Scheme, Air-India gives you that extra something, if you haven't been abroad in the past 3 years.

* Subject to approval of all Govts.

FROM OBSCURITY TO SECURITY IN ONE DECADE

Twenty years ago, NRC came to Mohone as a trespasser from another world. Mohone was forest land with a few village huts. Then as the location of the NRC complex of industries, Mohone was stirred from its long yawn of centuries to be catapulted into turbulent industrial life. Today, Mohone

is the throbbing NRC township housing 8000 people, with hospital, school, playgrounds and gardens, and contributing in good measure to India's economic growth as well.

Sometimes a giant is made out of a forgotten little mole-hill.

THE NATIONAL RAYON CORPORATION LTD.

Building a collaborate relationship

EVEN if Mrs Gandhi's Government did not enjoy the massive mandate which the elections have renewed, the task before it would have remained simple and clear: to fulfil the aspirations of the people. No other electoral slogan expressed these aspirations better than the one which held promise of removing poverty. It is none too early to give body and shape to this election slogan. The essential ingredients of the programmes which would help the Government to make Mrs Gandhi's electoral promises good are now being mapped out by her—and none too soon. No wonder, her words are tailored to the requirements of the changing context. They are, nevertheless, addressed to audiences much larger than her immediate listeners. This is explicit in the emphasis on hard work in the Prime Minister's replies to debates on the President's address to Parliament. People's participation was again stressed by her when she inaugurated the Indian Co-operative Congress: "No Government, howsoever strong or determined, can by itself solve all the economic and social problems with which a country is beset." The social purpose of co-operatives was to enable "people to help themselves". The co-operative movement also enabled the "State to provide support and resources without inhibiting initiative and individuality".

In spite of the passing threat that the Government may have to encroach on private sector activity, industrialists who may or may not have been present at the Ficci session last Saturday can do much worse than forget the agenda for action which the Prime Minister outlined at the Co-operative Congress: "The task of Government is to supplement people's efforts, to mobilise and make

available the resources; to provide a blueprint and a plan; and to ensure that the enterprise and efforts of millions of people have a well-defined aim and that they bear fruit. In the Indian situation, Government has necessarily to perform the negative task of preventing vested interests from monopolising all the gains." Even as the Prime Minister looked forward to a "growing and collaborate relationship" between the public sector and co-operatives, the outgoing President of the Federation, Mr D. C. Kothari, was visualising between the Government and industry a similar and mutually beneficial relationship.

Yet, to maintain its leftist image, the Government must perhaps adopt a seemingly different posture in talking to the captains of industry and trade. Harking back to the anti-social aims of private enterprise must also be partly attributed to the Government's inability to give up some outdated premises. Unfortunately indeed, as Mrs Gandhi said, some co-operatives are "exclusive clubs, which shut their doors to those who do not belong to their circle and which do not adequately help the cause of the weaker sections which they claim to serve. Small farmers, tenants and Harijans are seldom members of co-operatives. It is also said that only a small number actually gets loans and assistance". This would mean that the extent to which social purpose guides the activities of co-operatives is in some areas no larger than is believed to exist in the private sector.

In order, therefore, to ensure that the performance—whether of private industry, of co-operatives or even of the public sector—

does not fall behind the expectations of the people, some kind of policing may certainly be necessary. It needs to be impressed upon them all that their image will be built up and their credibility sustained only to the extent they are moved by a sense of calling which places public good before personal or sectional greed. Before the budget session of Parliament begins in May, therefore, the Government must make up its mind on the areas in need of this police action. So far as the private sector goes, will it be the Industry Ministry itself, aided by the Monopolies Commission? Must the Monopolies Commission work in isolation from the Bureau of Costs and Prices? To what extent is there room for a separate Tariff Commission now? Is a watch on restrictive practices an inseparable activity of the Monopolies Commission? Simultaneously, let the Government turn to the public sector where performance has been by no means flattering. What is it that will help step up investment? How can steel, fertiliser, petro-chemicals and other programmes, which have shown a shortfall in the 1970-71 Plan outlay of some Rs 200 crores, be speeded up?

To the socially disruptive problem of unemployment, there is no doubt that greater entrepreneurial activity and greater accent on growth can provide an answer. If the private sector complains in this context about licensing delays, this should not be dismissed as mutual recrimination. The Government must ask which are the private sector investment programmes that have been held up because of procedural and policy obstacles. Whether or not wages get linked with productivity, the fact remains that productivity needs to be increased substantially. Unless this is done, we cannot but lose export markets in the long run. Price stabilisation is not a ruse to deprive producers like farmers or workers of legitimate gains but an insurance against "the false starts and weak endings", mentioned by the Prime Minister, which really have led the Government to "reappraisal of the planning process".

Obviously the Government still looks with suspicion upon the doings and demands of the private sector. The reason is perhaps to be found in the belief that it works for private profit and not for social gain. In her address to the Federation of Indian Chambers of Commerce and Industry, Mrs Gandhi did well to refer to "premises which are no longer relevant". Profit motive has already become in some areas corporate industrial activity a premise no longer relevant. However, efficiency, good management and bold entrepreneurship must be prized if not rewarded handsomely. It will be conceded—and nowhere so emphatically as in the responsible sections of private industrial enterprise—that it should seek its justification in its contribution to growth with social justice. Wherever there is anti-social pursuit of Mammon or the gains are being monopolised by vested interests, none would object to Government's encroaching upon the domain of the private sector. Mrs Gandhi must know that the areas which must thus attract the heavy hand of Government are also those which have burgeoned on political patronage of a most cynical and anti-social kind. Behind the political demand for decentralised licensing and State-wise allocation of foreign exchange resources, there is the same and none-too-subtle attempt to add some more patchwork to the crazy quilt of patronage held by corrupt politicians.

The Prime Minister spoke of Government's difficulties in proceeding with equal speed along the industrial front. But imbalances result because the essential inputs of one sector are not provided by the outputs of another. Here surely the Government has a positive role to play. Whether it is personnel or procedure, many changes are called for in the public sector, so that politics and bad management do not make nonsense of the larger social purposes for which the public sector was created and can be allowed to exist. Regional imbalances are more intractable. The Government is handicapped by natural constraints. These, however, should not become an *alibi* for *status quo*. In order to move away from the unsatisfactory *status quo*, the people are expecting a lead as much from the Government proper as from the co-operative, private and

public sectors. Instead of justifying past policies and holding out threats, it is to this national task of providing leadership and creating the right climate of hope and achievement to which Mrs Gandhi and her Government must address themselves.

Stemming the dollar flood

THE exchange markets in Western Europe are again in a state of turbulence. Financial experts are of the view that the crisis is still not over and the influx of dollars into European markets still continues at levels that cause concern to the central banks of the West European countries. A number of central banks have reduced their Bank rates. In Sweden, Belgium, Holland and Italy, the reduction has been of the order of 0.5 per cent, while West Germany and the UK have slashed their rate by a full one per cent. In each case the reason given is the desirability to limit the inflow of capital from the US. In Sweden and in the UK there is an additional reason for the cut. They are anxious to make credit cheaper in order to encourage massive expansion of industries. It is reported that Japan also might follow suit. Mr Tadashi Sasaki, Governor of Japan's central bank, has stressed the need to prevent further expansion of the already over-abundant foreign exchange holdings and this could be done only through the lowering of the Bank rate. Mr Sasaki has also indicated that the central bank was marking time before determining whether to relax the nation's money supply with a view to reviving the sagging domestic business operation.

It may be that some countries were contemplating the lowering of the Bank rate without having to face the influx of dollars from the US seeking higher returns on loans. But there is no doubt that the concerted action by so many central banks was the result of the decision of President Nixon to set the economy humming well before the election campaign for the presidency started next year. He has already announced that the US Administration has decided to go all-out for domestic expansion irrespective of the effects upon the balance of payments of the dollar outflow. No help is, therefore, to be expected from Washington to ease the problems of the West European central banks. The question is: what will they do in case the lowering of the Bank rate by itself does not stem the inflow?

One possible solution of the problem is to reduce the supply of Euro-dollars by forcing up Euro-dollar rates. This would be possible if the US were to increase American short-term interest rates which might stem the flow of dollars back to Europe. When the US Administration policy was one of tight money American banks had borrowed in the Euro-dollar market and these borrowings had reached a peak of over \$14,000 million in August 1969. After the sharp cuts in American interest rates the borrowings have been brought down to around \$4,000 million. The other possible solution is for the Europeans to take recourse to the special drawing rights system which might put up pressure on the Nixon Administration to be more accommodating. It remains to be seen, however, whether the International Monetary Fund would favour such a course.

If these lines of attack are not possible or fail to restrain dollar flows the West European nations and Japan might have to consider the desirability of revaluing their currencies. At the moment there are no prospects for such revaluation, partly because the dollar today is not over-valued in terms of the great majority of strong currencies in similar proportion. Nor is there any possibility of the German mark being revalued in isolation because that would affect its parity with major currencies. And this leaves only one way—to allow the exchange rates to float for some time. This would strike at the very basis on which the present international monetary system rests. All this adds up to the IMF making up its mind regarding the reforms in the international monetary system before it is too late.

INDIAN exporters who participated in the Leipzig Spring Fair last March were, by and large, a dejected community. As many as 140 enterprises were represented at this most important trade fair of the German Democratic Republic, but hardly any one of them was able to strike an export deal. "If this goes on repeating itself we shall have no interest in this fair," remarked one of them to this correspondent. He may have been exaggerating the situation considering that both India and the GDR are keen on expanding mutual trade. Nevertheless, his remark did underline the point that in participating in this fair we should be clear about our objectives.

Leipzig Fair has a tradition that goes back to over 800 years. It is truly an east-west trade fair to which a larger and larger number of developed and developing countries, besides the socialist countries, are attracted year after year. But being the fair of the GDR the general impression persists that it is a forum where business can be done with that country. This view is strengthened by the statements that are made on the occasion by official spokesmen of the GDR. This year, too, GDR's Minister for External Economic Relations, Mr Horst Solle, announced at a press conference, held on the fourth day of the fair, the several contracts which the GDR had signed during the fair. He also said that there was every evidence

The Editor is on tour. His Notebook will be resumed on his return.

that negotiations conducted by the participating socialist States, developing countries and the industrialised countries among themselves were brisk in character.

It should be obvious, however, that the GDR's business of millions of marks, the announcement of which was made on the occasion of the fair, was planned much earlier and was not the result of the negotiations at the fair. Selling goods to the GDR is not the same thing as selling goods in a free market economy where on the strength of quality and price it may be possible to enter into contracts at a trade fair or at least create sufficient interest in particular items to hold fruitful negotiations later.

In the economic philosophy adopted by the GDR—in fact by all the socialist countries—foreign trade has a definite role to play in the advancement of the economy. Be it exports or imports, these must fall within the framework of the economic plan, which means that more than the trading agencies it is the State planning agency that defines the composition, pattern and direction of the foreign trade. There is also the fact that the Comecon countries have set in motion the process of co-ordinating national plans, and this policy takes into account bilateral trade negotiations as well. This has helped to put on a firm foundation more than 70 per cent of the GDR's exports and imports.

The GDR is anxious simultaneously to strengthen her trade relations with the developing countries, and the Minister for External Economic Relations noted that

Promotional fair at Leipzig.

By D. B. Mahatme

the GDR's trade with these countries rose in 1970 by more than 12 per cent. He also said that the pattern of trade with the developing countries had in the past year been even better adapted to the requirements of the business partners and claimed that through the supply of plant, equipment and machinery the GDR was actively engaged in promoting the growth of the national economies of the developing countries while they, in their turn, found the GDR an active and safe outlet for exports of their raw materials, agricultural produce and semi-finished and finished products.

Trade figures are proof enough of the growing relations between the GDR and the developing countries. According to the official 1970 Statistical Pocket Book, GDR's exports to developing countries increased from 390.2 million settlement marks in 1962 to 793.2 million marks in 1969; imports expanded from 401.1 million marks to 646.5 million marks (currently one million marks are equivalent to about Rs 1.8 million). The trade with India is also growing as shown below (based on GDR's statistics):

	(Million marks)	1960	1965	1968	1969
Exports to India		56.8	116.5	109.9	124.1
Imports from India		69.6	122.8	115.6	114.7

The figures for 1970 are not available. But both India and the GDR have talked in terms of expanding the turn-over of trade by 10 per cent annually.

There is no doubt that the GDR is as keen on this as we are. But mere desire is not enough. First, our trade is on rupee-payment basis, which means that it has to be a balanced one. This in turn means that if our exports are to increase our imports from the GDR will also have to expand. This directly takes us to the problem of identifying the imports and exports that can be increasingly made and the mechanism to be utilised for this purpose.

It has been repeatedly said that one of the instruments for achieving this objective is the Leipzig Fair. It has been argued that the bigger our participation at Leipzig the easier it will be for the GDR to decide on what more goods it could buy from us. The limitations of this argument have not been discussed fully. It is possible for us to show the most sophisticated machinery that we manufacture in this country and yet not be able to sell anything at the Leipzig Fair to the GDR. One reason, as has been stated earlier, is that the GDR's economic plan lays down the priorities of imports and anything that we want to sell to that country must fit in with these priorities.

This was at least the experience of a manufacturer of popcorn machine who went with high hopes to the Leipzig Fair. Hundreds of East Germans used to visit his stall daily and also eat popcorn with great relish. He

sincerely believed that he had established the worth of his machine and also that there was a good market for popcorn in the GDR. Eventually, however, he was told that the East Germans did not eat popcorn and there was no possibility of the GDR importing that type of machine. To the end he remained unconvinced that the East Germans did not like popcorn and it looked to him that it was an arbitrary decision to say that his machine had no marketing possibilities in the GDR.

In a sense it was the experience of other Indian exhibitors, too. Quite considerable interest was evinced in industrial safety gloves, duplicator machines, do-it-yourself electrical kits, industrial diamonds, aluminium garden chairs and steel pipes which the Indian manufacturers had displayed. But the inquiries for these came from West Germany, the UK, Sweden, Poland, Yugoslavia, Hungary and other countries. There were some inquiries even from Aden for joint collaboration in the electrical field and detergents, but the Indian participants at the Leipzig Fair were disappointed that no one from the GDR showed any interest in any one of these items.

Some of them were reportedly told by GDR officials that there were no funds in the rupee account for the GDR to place orders for imports. This could not be immediately verified though it is true that the mechanism of the rupee trade is such that at times bottlenecks can arise in the smooth flow of trade if there are no continuous imports and exports. This has been amply demonstrated in the case of our trade with the UAR (See *Commerce*, April 10, 1971).

There were others who seemed to be under the impression that the dispute over the RS-09 tractors had something to do with the lukewarm attitude shown by the GDR towards Indian exporters. They felt that since some of these tractors were to be taken back by the GDR, the authorities there would like to have a clear picture of the monetary implications before going ahead with imports from India. Such of the GDR officials with whom this matter was discussed by this correspondent denied this. Interestingly, two views were heard on this tractor issue. Some traced this unhappy development to the "lobby" working against the GDR in this country and in particular allegations were made against West Germany. But a well-informed source, who had the opportunity to look into all the aspects of the dispute, felt that it was possible that the manufacturers of these tractors failed to take into account that this equipment might not be suitable for the climatic and soil conditions in Punjab and elsewhere though these tractors had proved a great success in the GDR Poland and in the Soviet Union. But apparently those who know

(Continued on page 726)

MARKET GOSSIP

LIC, UTI and IISCO

WHAT is behind the purchase of a large block of shares of Indian Iron and Steel Co Ltd this week by the Life Insurance Corporation and the Unit Trust of India? No clear answer will be immediately available. In any case, the purchase of 30 lakh shares of Indian Iron at a price of about Rs 3 crores by the two institutional investors on Tuesday is considered a rare event in the history of share purchases by such investors. The deal is significant in many respects. It gives the LIC and UTI a share of about 35 per cent in the 2.48 crores equity shares of the company. The price at which the deal was struck was about par and was the lowest price for the shares paid during the last seven years by the LIC. It was much lower than the price of Rs 11.30 quoted for the share on Monday. The LIC on Tuesday added 20 lakh shares to its already existing holdings of 57 lakhs giving it 31.8 per cent share in the equity capital of the company. The UTI purchased 10 lakh shares raising its share to 4 per cent.

Reportedly the shares were purchased from "weak hands" who had raised bank loans for the purchase of these shares. It has been known for some time that these large holdings in weak hands have been a drag on the market and the Bombay Stock Exchange had delisted the Indian Iron shares. Not only this. For some time there was speculation on the future of the management of this company and the last annual general meeting of IISCO did see some sort of tussle. Interestingly, a large block of 33.67 lakh shares of Indian Iron are held by a trust and the Government-appointed Public Trustee exercises the voting right on behalf of this trust. It is apparent that the LIC, the UTI and the Public Trustee together can thus have a large voice in the affairs of the company. There is speculation whether this could mean that the LIC and the UTI would participate in the management of Indian Iron. This may not be the case and the purchase of the shares by the LIC and the UTI may be pure investment. But the LIC Chairman, Mr T. A. Pai, has also been saying that the Corporation would always try to safeguard the interest of shareholders wherever it can do this. And in IISCO the LIC is in that position. □

Was the squeeze too tight?

DOES the Reserve Bank feel that the credit squeeze it enforced was too tight? It would appear so from the series of decisions announced by the RBI in recent days. The immediate results of the squeeze are apparent. Net of food procurement advances, credit expansion up to the end of March this season has been Rs 280 crores as against Rs 535 crores during the corresponding period of the last season. Although several relaxations have been made in the credit policy since the squeeze

began in January, the total credit expansion this season has been just over half of the massive expansion last year. Again, the impact of the squeeze has been felt by the borrowers only in March and that too by some of the traditionally organised borrowing industries. Furthermore, these industries were able to obtain special considerations or concessions.

The main mechanism of the credit squeeze was the curtailment of Reserve Bank refinance to banks. With their over-extended position due to lendings to the priority sectors and for food procurement, the banks had virtually no funds and were forced to freeze the lendings to their borrowers or squeeze them. The unprecedented levels of credit-deposit ratio and of inter-bank call money rates and the penal rates paid for Reserve Bank borrowings bore testimony to the tightness in the liquidity of funds of banks.

Gradual relaxation took several forms. The LIC and the Unit Trust funds relieved banks to some extent, but these funds were already within the banking system. The Reserve Bank restricted itself to a penal rate of 15 per cent and allowed special quotas for lending to textiles, sugar and engineering industries. And now further refinance estimated to total Rs 25 crores has been allowed by the Reserve Bank to banks against their food procurement advances. Hitherto, the amount of refinance provided by the Reserve Bank at Bank rate (since November 1970), irrespective of the net liquidity position of banks, was 50 per cent of the rise in food procurement advances over the level as on October 30, 1970. Now, between April 9 and June 30, 1971, banks will get 75 per cent, which will be reduced to 60 per cent during July and to 50 per cent thereafter. Simultaneously, the banks have relaxed the informal freeze on new limits and, as the UP Government has claimed, a further amount of Rs 24 crores has been promised to the sugar industry.

The relaxation will ease the liquidity position of banks to some extent, but not very much really. It is expected that food procurement advances will rise rapidly during May and June and will take away most of the liberalised refinance. Nevertheless, some easing of credit restrictions is expected. One of the reasons given for the current series of relaxations in credit squeeze is that the price situation has eased somewhat. The claim may not be entirely justified and, in any case, the prices take a downward look at this time every year with the market arrivals of agricultural products. One of the reasons why the severe credit restrictions have not caused any particular harm to many borrowers is that, during the past two years, the secular trend of credit has been rising at a very rapid pace. The return flow of funds to banks from busy season credit expansion of the last two years has been only marginal. Thus with a very large

base of outstanding credit, this year's restrictions have not made any material difference to the borrowing public. □

Mr Mishra relents

TEXTILE industry circles here have generally welcomed the outcome of their delegation's meeting with Mr L. N. Mishra, Union Minister of Foreign Trade, over the issue of production controls. It was apprehended earlier that the authorities would proceed with the implementation of the proposal to augment production of controlled varieties to 40 or 50 per cent of the total production. Any hasty step in this direction would have led to chaotic conditions and some of the units would have been obliged to close down in the process.

While the Minister has maintained his earlier stand that no further rise in the price of controlled varieties of textiles would be granted pending the cost investigation by the Bureau of Industrial Costs, he has seen the wisdom of allowing some time for the mill industry to make the necessary adjustments. As a result of the talks between the representatives of the industry and the Minister a high-level committee has been set up to work out the details of the scheme to step up the production of medium and coarse varieties of cloth. The committee will comprise representatives of the Indian Cotton Mills' Federation, the National Textiles Corporation, the Cotton Corporation of India and other interests associated with the textile industry. This means that sufficient elbow room would be given for the industry to work out the proportion of controlled varieties to the total production and one can be sure that there would not be any drastic upward revision of the reserved quota as contained in the original proposal of Mr Mishra.

The industry, on its part, should realise the changed political circumstances and take sustained measures to see that sufficient quantity of coarse and medium cloth is produced to meet the demand of the common people. It is patent from the figures given by the Minister that the industry had been lagging behind in its obligation to produce the stipulated quantum of controlled varieties. The production of these varieties came down from 13.3 per cent of the total output in the last quarter of last year to just 1.1 per cent during the last quarter. The mill industry has now given an assurance that it will not seek to get out of its obligations by agreeing to pay the penalty as it had been doing in the past. It is to be hoped that before fixing the ratio of production between controlled and non-controlled varieties, the high level committee would make a thorough study of the implications, with specific reference to the export potential. Any undue importance to the home market should be avoided in order to prevent permanent loss of the prized overseas markets which have been built up at great cost. □

ACID PLANTS?

P & D CAN SET THEM UP FOR YOU

Planning & Development Division, which has over the years developed a wide range of process know-how, offers you its experience and expertise for the setting up of

- Sulphuric Acid Plants
- Nitric Acid Plants
- Phosphoric Acid Plants

P & D is well versed in the planning, design, engineering procurement, installation and commissioning of these plants. With more than 20 years of experience in the running of such plants, and more than 10 years of experience in the design and installation of plants such as

these, it has developed the ability to locate and solve the problems of running units, speedily. This experience is passed on to the customer without any charge. Acid plants set up by P & D, therefore, assure the vital benefits of low capital investment, low operating costs, high on stream factor, high conversion efficiency and minimum foreign exchange.

It was P & D's engineers who designed and constructed the world's largest Nitric Acid Plant (1600 tpd) of its kind at Rourkela 10 years ago and since then they have never

looked back. P & D is presently engaged in the planning, design, engineering, construction and commissioning of 10 major projects involving more than 5000 million rupees.

USSR: MORE CONSUMER GOODS

THERE were no dramatic developments or pronouncements at the twenty-fourth Congress of the CPSU which has just ended in Moscow. The same collective leadership has been reinvested with the task of leading the Soviet Union between this session and the next. It was, however, decided that the Congress should be held every five years, running along the period of five-year plans of the economy, instead of every four years. This lengthening of the period between the two Congresses also reflects the absence of a major conflict at the top leadership level. In the near future, therefore, the Soviet Union is expected to continue its middle-of-the-road line. From the proceedings of the Congress it also appears that there will be greater concentration on internal as opposed to external affairs. The key-note speeches of both Mr Brezhnev and Mr Kosygin indicate that their main concern will be with the development of the economy and especially of consumer goods.

This concern is understandable. Rightly or wrongly, the leadership of the Soviet Union has staked its claim on behalf of communism on its capacity to match and surpass the economic strength of the most powerful capitalist country in the world, namely, the United States. At one time they were hoping that the rapid development of technology itself would help the Soviet Union achieve this goal. But there had to be a searching analysis of the drawbacks of the Soviet economy which resulted in the decision to change the whole management system. It was decided that the management of the individual units should enjoy greater autonomy within the constraints provided by the detailed national plan. The management was called upon to become profit-conscious and to improve the qualities of the goods produced so as to meet the requirements of the consumers. This change in the philosophy of management has resulted in greater consumer satisfaction. But it has failed to lift the productive capacity of the economy to the level of the US.

In this Congress the emphasis was slightly changed. The resolution passed at the Congress approved the economic programme for a rapid upsurge in the living standard through accelerated development of the consumer goods industry and social service. Of course, it was added that the tempo of the development of heavy industry should be maintained as it was the foundation of extended reproduction and of the technical re-equipment of the national economy and the Soviet States' defensive might. This resolution has to be read with the remarks of Mr Brezhnev. While presenting his report he openly criticised the lethargic attitude of those who accepted the deficiency of certain commodities as a fact of life. The planners, managers, retail organisations, trade unions, and local party organisations were charged with the responsibility of development of light industry and increasing the supply of consumer goods. It was stressed that this was necessary not only for raising the

standard of living but also for ensuring greater circulation of money. The Government has decided to start buying back State bonds from 1974. This would put more money in the hands of the people, and unless there is matching increase in the supply of consumer goods inflationary pressures might increase.

Mr Kosygin has promised to boost the production of consumer goods by more than 40 per cent in the next five years thereby making the life of the Soviet citizens "more prosperous, more meaningful and interesting". This might help in stepping up India's trade with the Soviet Union. There are indications that the Soviet planners are thinking in terms of utilising the processing facilities available in the Indian economy for producing consumer goods. A recent agreement has provided for the import of cotton by India from the Soviet Union to be turned into cloth for export to the Soviet Union. With the emphasis now on raising the living standards of the people of the Soviet Union, more similar agreements can be expected. □

BILLS FOR SALE

AS the deadline for the replacement of the old Bill Market Scheme under Section 17 (4) (c) of the Reserve Bank of India Act by the new Bill Rediscounting Scheme approaches, measures are being taken to popularise the new scheme and to make it workable. Banks have been requested to persuade their customers to convert part of their cash credits into bill limits. Indeed, the Reserve Bank has reported that while sizable limits have been sanctioned since November 1970 under the new scheme, actual utilisation of the limits has been meagre. The main purpose behind the scheme is that while cash credits may still be allowed for inventories and wage payments, all sales of raw materials, intermediate goods or finished products should be covered by the bills. It is unfortunate that the borrowing public has not properly understood this position. Many borrowers are afraid that the Bill Market Scheme will be utilised to curtail the credit facilities available to them. This may be so, if they were enjoying excessive credit facilities. But all genuine producing and selling activities will be covered by the cash credits and bill limits together. On the other hand, many borrowers, especially in the textiles industry, think that they would be able to get new bill limits in addition to their cash credits. It is necessary that banks take more energetic measures to popularise the Bill Market Scheme and explain its working to their borrowers.

One of the requirements of the Bill Market Scheme was that the bills must be accepted by the buyer's bank or the buyer's acceptances must be guaranteed by it before the bills became eligible for discount by a bank and rediscount by the Reserve Bank. It has now been realised that the acceptance or guarantee of the buyer's bank may be difficult to be obtained, particularly when sellers are small-scale industries. The latest relaxations to

the Bill Market Scheme have therefore extended the categories of eligible bills for discount and rediscount purposes. These will include: (i) bills drawn on the buyer and his bank jointly and accepted by them jointly; (ii) bills drawn on the buyer and accepted by him under an irrevocable letter of credit and certified to that effect by the buyer's bank; and (iii) bills drawn on and accepted by the buyer and endorsed by the seller in favour of his bank and bearing a legend signed by a licensed scheduled bank to the effect that payment of the bill would be made by that bank as an endorsee on due dates. The new Bill Market Scheme should now have a good beginning, provided banks educate their customers and publicise these facts extensively and adequately. □

PARALLEL PLANNING BODY ?

WHAT looks like a parallel planning commission has just been set up by the Tamil Nadu Government. The Chief Minister, Mr M. Karunanidhi, is its Chairman and Mr E. P. Royappa, its Deputy Chairman in the grade of the Chief Secretary. The commission will also have full-time and part-time members, a Secretary and a Deputy Secretary. As an advisory body, it will make its recommendations to the Cabinet. Assessing the State's material and human resources and formulating a plan for their most effective and balanced utilisation are its principal functions. The set-up and the functions of the State Planning Commission are thus more or less identical to those of the Central Planning Commission.

There is no mention in the Government announcement either that the State Commission would be subordinate to the Central Commission or that it would co-ordinate its activities with those of the latter. It thus seems to be intended that the former should function independently of the latter. Potential friction or conflict between the two Commissions, leading to strain in the Centre-State relations, cannot be ruled out. What should cause some anxiety, in this connection, is that the State Planning Commission has also been charged with the responsibility for indicating the factors that tend to retard economic development in the State and for determining the conditions which should be established for the successful execution of its plan. No prophetic powers are required to foretell that the Centre's powers in respect of industrial licensing, foreign exchange allocation, taxation, etc would be assailed more cogently and determinedly by the Tamil Nadu Government on the basis of its Planning Commission's findings and recommendations. □

STATE BUDGETS

W. Bengal, Mysore and Orissa

MR Vidya Charan Shukla, Minister of State for Finance, presented to the Lok Sabha on March 27, 1971, the budgets for 1971-72 of West Bengal, Mysore and Orissa which are under President's Rule.

The budget of West Bengal for 1971-72 showed an overall deficit of Rs 28.60 crores. The estimated revenue receipts were placed at Rs 299.85 crores as against the estimated revenue expenditure of Rs 320 crores, resulting in a deficit of Rs 20.15 crores on revenue account. The provision for capital disbursements has been made at Rs 36.49 crores compared with Rs 27.33 crores in the revised estimates for 1970-71. The Calcutta Metropolitan Development Authority has been provided with Rs 65.13 crores for 1971-72. The Planning Commission has placed the 1971-72 Annual Plan outlay of West Bengal at Rs 59 crores which is higher by 15.7 per cent than the likely Plan expenditure of Rs 51 crores during 1970-71. This is yet to be approved by the State authorities.

The Mysore budget for 1971-72 which also showed an overall deficit (Rs 14.46 crores) was presented to Parliament to secure a vote-on-account for the first four months—April to July 1971. The budget was presented earlier in the State Assembly on March 15, 1971 (Please see *Commerce*, March 20) but could not be passed because of a political crisis leading to President's Rule.

The Budget of Orissa for 1971-72, on the other hand, showed a nominal surplus of Rs 33 lakhs. A statement on the budget revealed revenue receipts at Rs 146.48 crores and revenue expenditure at Rs 154.08 crores. Thus, the revenue account closed with a deficit of Rs 7.60 crores. The total revenue expenditure also included Rs 13.37 crores, for State Plan schemes and Rs 9.56 crores for Centrally-sponsored schemes. The State's Annual Plan outlay for 1971-72 has been fixed at Rs 48 crores as compared with the likely expenditure of Rs 46 crores in 1970-71 which marks an increase of 4.3 per cent.

Rajasthan

THE 1971-72 budget of Rajasthan was presented by the Finance Minister, Mr Mathura Das Mathur, to the Assembly on March 27. The revenue receipts are placed at Rs 186.01 crores and expenditure at Rs 197.28 crores. Thus, the deficit on revenue account is expected to be Rs 11.27 crores. The capital account with receipts at Rs 74.82 crores and disbursements at Rs 89.06 crores shows a deficit of Rs 14.24 crores. The overall deficit estimated in the budget is Rs 25.51 crores. The Finance Minister has proposed the following important measures for additional resource mobilisation: (a) revision of sales tax on country liquor, *bhang* and *ganja* and high speed diesel oil; (b) rationalisation of Central sales tax on man-made fibres, non-ferrous metal sheets, pesticides, vanaspati, etc; (c) revision of the State sales tax on certain specified goods; (d) revision of the lump sum amount payable as goods tax under the Rajasthan Passengers and Goods Tax Act; (e) revision of land revenue rates; and (f) fees for conversion of agricultural lands into *abadi* in urban areas. All these measures are expected to yield an additional income of Rs 1.60 crores. These additional resources of Rs 1.60 crores with the additional Plan expenditure of Rs 30 lakhs will reduce the overall deficit to Rs 24.21 crores. The Finance Minister proposed to abolish the betterment levy in all medium and minor irrigation projects. The 1971-72 Annual Plan of the State is placed at Rs 65.90 crores which implies a 16 per cent increase over the estimated expenditure of Rs 56.80 crores in 1970-71.

(c) While estimating foreign exchange reserves, SDRs transactions that might have taken place February 28, 1971 have not been taken into account.

(d) The figures indicate percentage change during the current calendar year upto the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

ACCORDING to the recent census, the population of India is 547 million in 1971 as compared to 439 million in 1961 indicating a growth of 24.5 per cent during the decade. In the previous decade, the growth was 21.5 per cent. Uttar Pradesh is the most populous State with 88 million followed by Bihar (56 million) and Maharashtra (50 million). The density of population is the highest in Kerala with 548 people per sq km against the national average of 182 per sq km. Sex ratio for the nation is 932 females for every 1,000 males. A favourable sex ratio for females is only in Kerala where 1,119 females are there for every 1,000 males. As regards literacy, 29.35 per cent were literate in 1971 as against 24 per cent in 1961. Among States, Kerala has the highest literacy of 60.16 per cent while among Union Territories Delhi's first position in 1961 is now taken by Chandigarh. Poona has attained the status of a metropolitan city by its population crossing the one-million mark. The population of major cities is as follows: Calcutta and suburban areas 7 million, Greater Bombay 5.9 million and Delhi 3.6 million.

The Reserve Bank relaxed on April 10 the credit squeeze imposed three months ago by stepping up the scale of refinancing at the Bank rate for commercial banks for food procurement advances from 50 per cent to 75 per cent till the end of June. As a result of this, commercial banks are expected to have an additional Rs 25 crores besides their own resources at their disposal to meet the demand for credit. This concessional refinancing will be reduced to 60 per cent in July and to 50 per cent from August. (See Market Gossip).

The Reserve Bank has raised the ceiling on credit to sugar mills from Rs 254 crores to Rs 275 crores against stocks to enable sugar mills to clear their cane price arrears. This was announced on April 11 in Lucknow by Mr N. D. Tewari, UP Minister for Finance, after a meeting with the Union Finance Minister, Mr Y. B. Chavan.

A branch office of the Industrial Development Bank of India began functioning at Bangalore (Reserve Bank Annex Bldg. at No. 10/3/8, Nrupathunga Road, Bangalore-2), from April 15.

The Union Cabinet decided on April 14 to retain the procurement prices of wheat at about the existing level as against the recommendation of the Agricultural Prices Commission for a reduction ranging from Rs 2 to Rs 6 in regard to various categories of wheat.

Dempo Steamships signed on April 11 contracts for the purchase of two bulk carriers—a 66,000-dwt bulk carrier from Belgium to be delivered at the end of 1974 and a 21,500-dwt bulk carrier from Hindustan Shipyard to be delivered at the end of 1973.

President Giri dissolved the Mysore Legislative Assembly on April 14 on the advice of the State Governor. Elections to the Assembly are likely to be held in October or November.

A total curfew was imposed in Ceylon on April 9 for 24 hours to put down the Che Guevarist insurgency. On April 11, the Government also placed guards

around the residence in Colombo of five North Korean diplomats suspected to have instigated the insurgency. On April 15 the Ceylon Government ordered the North Korean Embassy to close down and its staff were expected to leave the island within 24 hours. North Korea was accorded diplomatic recognition only in last May after Mrs Bandaranaike's Government came to power. (See also Report the World).

A spokesman of the External Affairs Ministry, New Delhi, announced on April 14 that India had given four helicopters to Ceylon in response to the Ceylonese Government's request for help to combat the rebellion.

King Mahendra of Nepal appointed on April 14 a new seven-member Cabinet headed by Mr Kirtinidhi Bista.

The new Government of Bangla Desh was formed on April 12 with Sheikh Mujibur Rahman as President and the Awami League General Secretary, Mr Tajuddin Ahmed, as Prime Minister. Meanwhile reports from Washington indicate that the World Bank has turned down a request from Pakistan to reschedule her debt servicing charges of \$35 million to be paid before June 1971. It is also likely that the Bank may not favourably respond to another request by Rawalpindi for a standby credit of \$75 million. The US administration has in the meanwhile taken an "interim decision" to hold Pakistan "on a very tight string" in foreign aid.

Mr Leonid Brezhnev was renamed on April 9 as the General Secretary of the Soviet Communist Party at the 24th congress of the party in Moscow. The politburo was expanded from 11 to 15 which included besides Mr Brezhnev, Mr Nikolai Podgorny, Mr Alexei Kosygin, Mr Mikhail Suslov, Mr Andrei Kirilenko, Mr Arvid Pelshe, Mr Kyril Mazurov, Mr Dmitri Polyansky, Mr Pyotr Shelest, Mr Gennady Voronov, Mr Alexander Shelepin, Mr Viktor Grishin, Mr Dinmuhamed Kunayev, Mr Vladimir Shcherbitsky and Mr Fedor Kulakov.

President Nixon announced on April 14 five measures aimed at improving Sino-US relations. These include the relaxation of the US currency controls to permit

Peking to use American dollars, permission for the US oil companies to supply fuel to Chinese ships and aircraft (except for chartered carriers bound for North Vietnam, North Korea and Cuba) and freedom for US vessels and aircraft to carry Chinese cargoes between non-Chinese ports. Meanwhile, an American table tennis team is on a tour of China since April 10 on Chinese invitation. With the team are three American correspondents, the first to enter China since the communists came to power. The Chinese Premier, Mr Chou En-lai, has hailed the visit of the table tennis team as marking an "important step in the relations" between Washington and Peking.

Money unchanged

Conditions were tight in the short term money market as of Tuesday. Demands for funds maintained and interest rates closed firm. In the inter-bank call section, both renewals and fresh money were reported at 10 per cent. In the Calcutta market the rate ruled at 9 per cent.

Price index down

During the week ended March 20, 1971, the Index Number of Wholesale Prices showed a seasonal decline of 0.8 per cent. However, at this level, the price index was 2.7 per cent higher than its level a year ago.

PEOPLE

MR S. S. Kanoria and Mr Madanmohan Mangaldas have been elected President and Vice-President, respectively, of the Federation of Indian Chambers of Commerce and Industry. A standing advisory committee was constituted which includes besides Mr Kanoria and Mr Mangaldas, Mr Shriyans Prasad Jain, Dr Bharat Ram, Mr S. L. Kirloskar, Mr Ramanbhai B. Amin, Mr L. N. Birla, Mr D. C. Kothari, Mr Pravinchandra V. Gandhi, Mr Harishankar Singhania, Mr M. V. Arunachalam, Mr Harish Mahindra, Lala Charat Ram, Mr J. H. Doshi, Mr A. K. Jain and Mr K. N. Modi.

Mr B. K. Vora and Mr N. V. Nayudu have been elected directors of the Central Warehousing Corporation.

50 years ago

The agitation against the wide and wider cultivation of jute in Bengal has not yet subsided; on the contrary it has found a new ally in the Bengalee, which assumes that the present low price of jute is due to overproduction. This organ of Indian public opinion asserts that "although the total consumption of jute has decreased, it has not on that account been bringing less profits to India. . . . Now, if jute is commanding as high a price in the foreign market as it did in 1913-14, why is it that its price has fallen abnormally low so far as the cultivator is concerned?" Hence the Bengalee is led to suspect that there is overproduction and that the supply exceeds the demand. But we have it on the authority of an expert—Mr F. S.

Finlow, B.Sc., F.I.C., the fibre expert to the Government of Bengal—that the low price is really due to the dearth of good jute and a plethora of bad fibre. Quality in jute largely consists of length, strength and colour; also the proportion of the length which is free from adherent bark—known in the trade as "root" which is found at the butt end of the strand. The longer the strand of fibre, the less the proportion of "root" and the greater the value of the fibre per maund. It is true that poor quality jute is being sold on the Calcutta market at Rs 3 per maund, which certainly does not cover the cost of cultivation; but good jute, on the other hand, is being disposed of at anything between Rs 20 and Rs 25 per maund.

RURAL EMPLOYMENT

Doubts persist over crash programme

NEW DELHI

THE crash programme for rural employment by which the Centre has set much store does not seem to have evoked much enthusiasm among the Chief Secretaries of State Governments who were specially called to New Delhi early this week to be told about the imperative need to implement the programme without delay. Some of them expressed doubts about the effectiveness of the scheme. Some others sought modifications in the programme which was to have been launched

on the first of this month. All this might contribute to further delay in starting the programme.

The crash programme for which a budgetary allocation of Rs 50 crores has been made for this year envisages, in the main, the provision of jobs to 1,000 persons in each district for a period of 10 months. As far as possible, only those who belong to families which do not have any adult earning member will be employed on works to be started under the programme. An illustrative list of labour-in-

tensive works drawn by the Centre for this purpose includes road building, reclamation and development of waste land, drainage, minor irrigation, ground water development, soil conservation and afforestation. The intention of the Centre is that these works should result in durable assets and contribute to the productive capacity of the rural areas. Rural works in the past had not been enduring because they were undertaken on a "kutchha" basis. Some of them were washed out by rains and others became inoperative because of lack of maintenance. Unless these problems are taken care of, it would be futile to hope for the building up of permanent assets through the crash programme for rural employment.

Some of the Chief Secretaries doubted the wisdom of having a district as the unit for the purpose of implementing the programme. They pointed out that there were districts with a population of over one million and the creation of jobs for only a thousand persons every year will not have any impact on the unemployment problem in those areas. They felt that it would be more realistic to adopt a development block as the unit and aim at providing jobs to a hundred persons in each selected block. There is some force in this argument and it is hoped that the Centre which has promised to review the programme periodically will make this change.

There was also some difference of opinion between the Centre and the States regarding the wages to be paid to people engaged in rural works. The programme provides for a payment of Rs 100 per month or Rs 3 per day. The Chief Secretaries not only considered the monthly wage to be inadequate but also thought that the ceiling of Rs 3 per day was unrealistic in the case of certain States, especially in Punjab and Haryana where farm labour has become increasingly scarce. Since there are backward pockets not only in every State but in every district in each State efforts must be concentrated on the pockets. This again underscores the need for making the development block as the unit for implementation of the programme.

Some States were not happy over the adoption of a 10-month span for the provision of employment to people in the rural areas every year. It is true, the cropping season varies from region to region. But some adjustments in the programme can be made to suit the variation in conditions in different areas as its implementation progresses. Few programmes are free of deficiencies, to begin with. But it does not mean that they should not be given a fair trial. This is all the more relevant in the case of the unemployment problem which, if not tackled with speed and determination, will lead to deleterious social consequences. The preoccupation of the Chief Secretaries with the refinement of the programme even before it is launched betrays lack of sense of urgency on their part, which does not augur well for the programme. □

CO-OPERATIVES

Why should they be exclusive clubs?

NEW DELHI.

THE sixth Indian Co-operative Congress which recently met in New Delhi was assured by Mrs Indira Gandhi—that her Government would extend the fullest support to the co-operative movement. But the Prime Minister also stressed the need for an inquiry into the problems which faced the movement. She pinpointed the tendency in some co-operatives of developing a special kind of vested interest. She said that it was unfortunate that they were looked upon as exclusive clubs "which shut their doors to those who do not belong to their circle and which do not adequately help the cause of the weaker sections which they claim to serve." Mr Brahm Perkash, Secretary-General of the National Co-operative Movement in India, on the other hand, charged the bureaucracy in the Government and the vested interests in the private sector with deliberate efforts to denigrating the co-operative movement and tarnishing its image. He, however, admitted that an atmosphere had been built up in the country which enabled vested interests to dominate the movement making it incapable of delivering the goods. Dr D. R. Gadgil who gave the valedictory address called upon the Government not to encourage the defaulting members of agricultural co-operative societies. All these three speakers were offering their own diagnoses of the most crucial problem facing the co-operative movement.

The co-operative movement has expanded rapidly in our country. But it has not yet utilised fully its enormous potential for doing good to the maximum number of people or to kindle people's faith in the co-operative system. The reasons for this had been investigated by a number of expert committees and it is difficult to appreciate the need for one more inquiry into the problems which faced the movement. Mrs Gandhi in her inaugural address said: "I know of no other instrument so potentially powerful and full of social purpose as the co-operative movement. It helps people to help themselves. It also enables the State to provide the necessary support and resources without inhibiting their initiative and individuality." She was of the view that wherever an agricultural breakthrough was preceptible, the development had been largely facilitated by a vital co-operative structure in the area. The co-operatives could help in the revolution now going on in the agricultural sector by offering credit, material inputs and marketing and processing services.

The Congress considered these problems and suggested remedies to impart a fresh vigour to the movement at a time when people were expecting rapid change and greater social justice. It has recommended to the Government that inefficiently-run private sugar factories, instead of being nationalised, should be handed over to the growers' co-operatives. It has called for the creation of a separate export credit fund to enable the co-operatives play a more effective role in the export of agri-

cultural commodities. It has suggested that cotton producers' co-operatives should be permitted to market cotton as that would protect the growers from exploitation by middlemen. The Congress has recommended greater financial outlays for the co-operative sector in the Fourth Plan. It has regretted that, in spite of specific recommendations made at the State Chief Ministers' conferences from time to time, a number of State Governments has not allocated funds for schemes to develop co-operative marketing. The Congress has called upon the Government to so orient its licensing policy as to give preference to co-operatives for setting up agricultural processing industries.

It was left to Dr Gadgil to assess realistically the present state and possible development of the co-operative movement. He was of the view that agricultural co-operative societies should be self-reliant and that the Government's aid should go only to the viable units. We pointed to the anomaly of no efforts being made in States where the structure of the

co-operative movement was weak to strengthen it. He stressed the need for self-discipline among co-operatives. Dr Gadgil also recommended that the nationalised banks should establish a workable link with co-operative societies so that long-term interests of the banks and the beneficiaries were safeguarded.

The Congress met at a very opportune time when the Government is engaged in the task of formulating its economic policies so as to fulfil the promise it has given to the people of banishing poverty. The rapid development of agriculture that has already taken place cannot be sustained in future unless there is an underpinning of an effective and broad-based co-operative system. The best results can be achieved only by effecting a close link between the two.

In fact, the wheat revolution in Punjab and the impressive sugarcane development in Maharashtra have been facilitated by the vigorous co-operative movement in these two States. In other parts of the country where the new strategy of

Cotton made us famous

BUT

today we do much more than trade in cotton. The house of PATEL-VOLKART has extended its interests to several other fields of business described here and earned in each of them a reputation for its excellence of service.

COTTON: Suppliers of all varieties of Indian Cotton, Foreign Cotton and Cotton Waste.

SHIPPING: Representatives of renowned Shipping Companies with regular Cargo and Passenger Services.

CLEARING & FORWARDING: Clearing & Forwarding Agents at Cochin and Madras.

ROAD HAULAGE: Transporters of goods by road in Madras and South India.

TRAVEL: Travel Agency at Bombay.

agricultural development has been adopted, the pace of progress would have been nearly as rapid as in Punjab and Maharashtra had it been reinforced by an effective co-operative system. Therefore, the time has come to make serious efforts to develop co-operatives as a necessary and long-term adjunct to the agricultural economy. □

CENSUS

11 crores more Indians

NEW DELHI.

THE enumerations for the 1971 census have ended and preliminary findings have been published by the Registrar General of India, Mr A. Chandra Sekhar.

According to the provisional estimate, the population of the country was 54.69 crores in 1971 as compared to 43.9 crores in 1961. This works out to a growth rate of 24.57 per cent during the 1961-71 period as compared to the growth rate of 21.5 per cent in the previous decade. As was to be expected, the growth rate of population has been varied in different States. Nagaland has recorded an increase of 39 per cent in 10 years. One distressing fact disclosed by the census figures is that the sex ratio is unfavourable to females. There are 932 females to every 1,000 males. This is attributed to a higher mortality rate among women.

The overall rate of literacy has gone up from 24 per cent in 1961 to 29 per cent in 1971. Another interesting point revealed is that the migration of the rural folk to some of the major cities such as Bombay and Madras has not been as heavy

as was feared earlier. In spite of this, however, Bombay's population has increased by 42.87 per cent in the 10 years from 1961. This is the largest percentage of decadal growth of population in Maharashtra. The State average is 27.16 per cent. Calcutta and its surrounding areas have now a population of over 70 lakhs. Delhi has a population of 36 lakhs. Poona has attained the status of a metropolitan city with a population of 11 lakhs.

This preliminary report presented to the Government just two weeks after the end of census was made possible because of the use of computers. The Registrar General of India hopes to complete the census report within six months. It is only then that it will be possible to judge better the trends in the evolving fertility patterns, and the impact of the family planning programme on the population growth. □

THE WORLD

From Our Own Correspondents

EEC

In-built protectionism in generalised preferences

BRUSSELS.

"LIBERAL, outward-looking and conscious of its responsibilities towards the developing countries:" this, according to Professor Ralf Dahrendorf, was the impression conveyed by the EEC the day the Council of Ministers approved the details of the Community's offer on generalised preferences. Those who believe a bird in hand is worth any number on the wing will probably share his view, because since the Council's decision of March 31 it looks as if the Common Market and Japan will be the first to implement their offers to grant duty-free entry for the manufactured and semi-manufactured products exported by developing countries.

The decision to implement the Community's offer from July 1 came as something of a surprise. In view of the French reluctance to fix a firm date as long as the Americans had not backed up their offer with something more than verbal assurances, the Commission had suggested that the Six take July 1 as a "target date." But when the time came the French voted along with the others to begin implementation from July 1, whatever the sins of omission of the Americans (or any of the other major donor countries, for that matter).

The French acceptance of the implementation date seems to have been directly linked to the Council's other important decision on preferences, that relating to the beneficiary countries. From the beginning it had been taken for granted that the 91 countries that make up the Group of 77 would be among the beneficia-

ries. As a result, debate among the Six had centred mainly on whether or not to include the four developing OECD countries (Turkey, Greece, Spain and Portugal) and Taiwan, Cuba, Malta and Israel. The French opposition was directed principally against Israel and, to a lesser extent, Taiwan (in both cases for evident political reasons).

The Commission, anxious that the Six begin implementing their offer as soon as possible, proposed that the initial list of beneficiary countries be limited to the members of the Group of 77 and the dependent territories of the industrialised countries (such as Hongkong). As the Germans and Dutch favour the inclusion of Israel among the beneficiaries, the French apparently felt that the Commission's proposal offered the best means of shelving the vexed question of Israel and Taiwan for some time.

Although the exclusion of Cuba and Taiwan, neither of which is a member of the Group of 77, will be regretted by some developing countries, the Group as a whole will welcome the Six's decision to implement their offer without further delay. (For purely technical reasons the Six may be compelled to postpone implementation by a month or so. The Commission must now draft the necessary regulations for the customs administrations of the six member States, and it is possible that this and associated administrative tasks will take more than three months).

The danger arises from the fact that under the EEC's scheme imports of the so-called "sensitive" items will be shared

out among the Six. In other words, each of them will take only a limited amount of these items, the shares agreed to by the Council of Ministers being West Germany 37.5 per cent, France 27.1 per cent, Italy 20.3 per cent and Benelux 15.1 per cent.

The "sensitive" items include such goods as petroleum products, certain hides and skins, leather articles, including travel goods, certain items of footwear, wigs, crockery, glassware, costume jewellery, sewing machines, bicycles and parts, toys etc. Under the Council's decision of March 31 imports of these items into West Germany, for example, will be limited to under 40 per cent of the import ceiling for any one of them. As a result, where West Germany is the main importer at least a part of the ceiling will remain underutilised.

The EEC officials believe the danger of underutilisation to be small; in their view the prospects of duty free entry will stimulate importers in all the EEC countries to redouble their efforts. The Commission nevertheless had proposed that a part of each ceiling be set aside for the Community as a whole. If this were done, any member country that exhausted its share could continue duty-free imports by drawing on the "Community quota". (Eventually a country that was unable to import its full share could turn over a part to the "Community quota".) But this proposal was strongly opposed by all the member states, although they agreed to look at it again in two years' time.

Unfortunately for the beneficiary countries, the Council of Ministers adopted unchanged the Commission's detailed proposals as regards the method of calculating the various import ceilings, the level of the cut-off points, the lists of "sensitive" and "semi-sensitive" items, etc. These are provisions which, without exception, will act as a brake on imports from developing countries. They must therefore be regarded as strongly protectionist.

with the possible exception of the cut-off point, mechanism, which should give countries like India a chance to compete successfully against Yugoslavia and Hong-kong.

Although the Six described their decision to grant preferences as "one of the most significant since the conclusion of the Kennedy round," the fact remains that only a dozen countries at most will benefit from it—for the first few years, at any rate. Their numbers would rise if the donor countries eventually decided to include the developing OECD countries and Israel and Taiwan among the beneficiaries, but even then would never be very large.

One problem that may yet turn up to bedevil the Six is that of mainland China. According to Italian sources Peking has indicated to Rome that it would like to establish formal ties with the EEC now that the Communist regime has been recognised by the majority of the Six member States. Should China be admitted to the UN this autumn it could seek admission to the Group of 77—or ask the Six to include it among the countries eligible under their scheme. Clearly it would be virtually impossible for them to shelve a request from Peking. □

CEYLON

Mrs Bandaranaike fights Che Guevarists

COLOMBO.

THE Che Guevarist uprising that has rocked Ceylon followed a disturbing pattern that has become common in many parts of the developing world—the discontented urban, educated youth forming the nucleus of rebellion by the peasantry. Even the relatively left-oriented Government of Mrs Bandaranaike could not provide, as is now apparent, a political solution. Just as other Governments in similar situations—whether of the left or of the right—Mrs Bandaranaike's administration had to rely on the army, the navy and the air force to put down the rebellion.

Since the uprising by the so-called People's Liberation Front began on April 6, the Government had to move fast placing the entire country under curfew and handing over the administration of six districts—Galle, Matara, Hambantota, Kegalle, Kurunegala and Anuradhapura—to the army. Nearly 300 of the insurgents are reported to have been killed while no official figures are available of casualties on the Government side. Apart from the state of emergency declared earlier, the Government proclaimed stringent punishment such as death, imprisonment up to 20 years and confiscation of property for offences of conspiracy to overthrow the Government. Colombo claims that the aim of Che Guevarists was to overthrow the Government but the plan was scotched by prompt action. At week-end, the massive campaign by the army had begun to produce results and the guerillas were on the defensive. The navy had been able to smash a hide-out at Maho, 160 kilometres from Colombo, claimed to be the headquarters of the movement.

Whether the Government is able to bring back the rule of law quickly or not,

the rebellion has left a deep scar in Ceylonese politics. Apart from the theories of foreign inspiration (the name that is more often heard is that of North Korea's Kim Il Sung than of Mao tse Tung), Ceylon's economy has been fast becoming an ideal breeding ground for political rebellion. The economy has markedly slowed down since 1969 and the per capita growth in national income has fallen to 4 per cent from the pre-1969 level of 6 per cent. Unemployment has been growing fast and nearly 8 lakhs out of the total population of 130 lakhs are jobless—12,000 of them jobless graduates. The Government's policy of subsidising imported rice and other politically expedient measures are a heavy burden on the exchequer. With the fall in the price of Ceylon's two main export commodities—rubber and tea—the trade deficit of the country reached last year a record of Rs 74 crores. Mrs Bandaranaike had swept the elections with her liberal promises of

lower prices, cheap housing and "jobs for all". The Che Guevarists (membership estimate 20,000) supported Mrs Bandaranaike at the elections. They were soon to be disillusioned as the new Government could move only at the same pace as in the past.

Once rebellion broke out, Mrs Bandaranaike tried to deal with it in the normal fashion. She had to look to the UK to obtain her immediate requirements of small arms, which were airlifted from Singapore. The rebellion has also reminded her that the immediate threat to Ceylon's stability comes from the extreme left and not from the extreme right—a fact which may tempt Mrs Bandaranaike to play down her leftist policies in the coming months and years. But the real threat to stability comes from the acute unemployment situation and the stagnation in the economy. □

BUSINESS REPORT

From Our Own Correspondents

FICCI

Purposive dialogue with Government

NEW DELHI.

THE annual session of the Federation of Indian Chambers of Commerce and Industry held in New Delhi last week was notable for the absence of confrontation between the Government and industry. It is difficult to recall any previous annual session where the approach of industry to various economic problems facing the country and its ideas about solving them were not at variance with the Government policy. This is not to say that a close identity of thinking between the two on these problems has now emerged. But that they are trying to speak on the same wavelength would be a fair summation. There was enough in the speeches of the Ficci President, Mr D. C. Kothari, and the Prime Minister, who inaugurated the session, to conclude that the process of convergence of their attitudes has begun.

Mr Kothari's address was refreshingly different from the presidential speeches in the past in that he refrained from harping on old problems or airing the grievances of the business community. The tax burden on industry which his predecessors without exception made much of and thereby provided a constant irritant to the Government found no place in his speech. He set the tone for a purposive dialogue with the Government by pleading for greater rapport, and Mrs Gandhi responded by expressing the Government's anxiety for a proper understanding with the private sector. As Mr Kothari stressed, the Government, management and labour have economic and social functions to discharge and they could do so effectively only if they acted as partners in the service of the community as a whole.

For the first time the presidential speech was devoid of a familiar characteristic, namely, criticism of the public sector. On the other hand, Mr Kothari struck a hopeful note while dealing with it. He visualised the public sector's becoming a large contributor to the public exchequer in the foreseeable future and thereby reducing the need for recourse by Government to taxation to raise resources for investment. He, however, rightly urged greater autonomy for public sector undertakings if they were to function efficiently. He tried to make common cause with the public sector when he made the point that the "corporate segment both public and private" could provide critically needed funds for sustained development which alone could ensure social justice. The same spirit motivated his plea for greater professionalisation of management.

While both the Ficci President and Mrs Gandhi were agreed that the growth of production should be linked with the spread of distributive justice, the emphasis they put on the relative priorities was not the same. Mr Kothari was clear in his

mind that only by strengthening the productive apparatus the country would be able to travel faster along the road to social justice. Mrs Gandhi, on the other hand, firmly believed that increase in production and better distribution should go hand in hand. Any other path, she asserted, would ultimately lead to decline in production. In this connection she referred to the Government's decision to step up public investment in the current year which would supplement what the private sector did on its own.

Mrs Gandhi told the captains of industry: "If your accent is on growth, you will find that there will be sympathy and support from Government". She, however, held out the threat that if they hesitated the Government might have to encroach on their preserve. This sounded like a discordant note on an otherwise favourable response to industry's desire to go with the Government wholeheartedly in bringing about the economic and social transformation of the country. Apparently, Mrs Gandhi has not been able to get over the experience of the past year when investment touched a new low. But now that

the country is assured of political stability—the lack of it during the past few years had undoubtedly inhibited investment—she need not have worried overmuch about investment continuing to be shy.

But Mrs Gandhi's speech in its totality should be reassuring to industry. For instance, Mr Kothari's suggestion that a formula should be worked out in consultation with the trade unions for relating some portion of the increase in wages to productivity found acceptance at her hands. Although she complained that specific measures to hold the price line met with resistance she had no hesitation in saying that the linking of wages with productivity was an effective means of maintaining costs and prices at reasonable levels. It is a measure of the importance that the Government attached to this matter that Mrs Gandhi told the Ficci session that it would soon begin discussions with trade unions and managements as to how best linking could be done. Similarly, Mr Kothari's plea for simplifying official procedures and reducing delays evoked a ready response from the Prime Minister in the form of a promise of action as quickly as possible. Also, on the subject of controls she made the point that they would not be used to stifle industrial growth but for ensuring that such growth as was achieved gave the maximum social benefit. □

FOREIGN INVESTMENT

Mitsubishi leads the way to India?

TOKYO.

JAPANESE business has lost little time in showing how deeply it has been impressed by the massive victory of Mrs Indira Gandhi in the recent mid-term poll. A Mitsubishi economic mission is visiting India this month for two weeks from April 20 to look for opportunities for investment, joint venture and trading partnership in third countries.

In fact, the leader of this high level mission, Mr Ninichi Nakagawa, Managing Director of Mitsubishi's world-wide trading empire where the sun never sets, has frankly admitted that he is going to India within weeks of a new government having been installed in New Delhi to "take advantage of the political stability brought forth by the landslide victory of Mrs Gandhi's party".

Mr Nakagawa does have some clear idea of what he is going to seek in India. For the moment he says that the purpose of his mission is "to find ways to expand India's exports to Japan and third countries, bilaterally and multilaterally and to provide technical assistance to improve production quality and meet the technological deficiencies in India". The mission will also study the feasibility of organising export-oriented industries through joint ventures. The mission comprises nine experts drawn from three departments of

the Mitsubishi empire—Mitsubishi Shoji Kaisha (trading house), Mitsubishi Heavy Industries and Mitsubishi Electric Corporation.

Announcing the mission Mr Nakagawa said that the main imports from India now are iron ore and other raw materials. "However, we understand that, as India has been endeavouring quite successfully to develop export of manufactured goods lately, she is naturally desirous of changing the mode and pattern of trade with Japan." He noted India's valid and "logical desire" to export end-products also, such as, machine tools and parts, chemicals etc, to Japan as well as to third countries through the joint efforts of the two countries. Mr Nakagawa has further said, "Our mission is prepared to discuss with Indian officials and private industries their need for capital investment and technology to meet the existing gaps as also what Mitsubishi can do to promote joint ventures."

The Mitsubishi mission is only the first in a series of such visits to India. There is frank admission here that the stability of the Indian Government can no longer be questioned. With mounting foreign exchange reserves—over five billion dollars at the time of writing—Japan is facing the inevitable problem of prosperity: what to do with so much money. Her investment area, too narrow today

because of her cautious outlook, has to be expanded. A stable government in India is expected to clear the clouds of doubt in the investment atmosphere. Japanese capital is unlikely to go to Calcutta area—and Mr Nakagawa does not hide his opinion about West Bengal—but for States such as Maharashtra, Gujarat, Mysore, and Tamil-Nadu its enthusiasm in time might exceed all bounds.

Here is an example of possible Indo-Japanese co-operation in third country. The Japanese are trying to win the contract for constructing an airport in Mumbai. If they get it, they may associate India with the project and use Indian materials as well as consultancy service. □

STC

Good record despite lower profitability

NEW DELHI.

THE State Trading Corporation has broken new ground by presenting a comprehensive picture of its performance in 1970-71 on the last day of the financial year. Normally companies in the public and private sectors take about six months after the end of a financial year to complete their accounts for that year. Admittedly the figures announced by the STC are provisional and there is bound to be a margin of error this way or that when the final balance sheet is drawn up. Notwithstanding this, the advantage of knowing the working results well in advance lies in the fact that the organisation concerned can take action right at the beginning of a new financial year to remedy the deficiencies noticed in its performance in the previous year. This will contribute to better planning of its activities, better implementation and greater realisation of targets in every succeeding year.

Despite the decline in its profitability in 1970-71—its profit before tax dropped from Rs 10.5 crores to Rs 5.9 crores—the STC gave a good account of itself during the year. It pushed up its total sales from Rs 163.1 crores to Rs 215 crores. Its exports rose from Rs 55.1 crores to Rs 70 crores, but they fell short of the target of Rs 75 crores for 1970-71. Imports also increased from Rs 102.6 crores to Rs 140 crores. Commoditywise the export of agricultural products and textiles recorded an appreciable increase, while general products staged a recovery from the decline it suffered on account of the loss of an important component, human hair trade. Chemical exports fared well and leatherware showed a healthy upward trend, the number of shoes exported in 1970-71 rising from one million pairs to 1.5 million pairs.

The Railway Equipment Division of the Corporation, however, did not come up to expectations. In fact, there was no export of railway equipment in 1970-71, although the corporation secured an order from Yugoslavia during the year for the supply of 3,600 wagons, its largest ever contract. This will figure in the Corporation's balance sheet for 1971-72, as also the wagon exports to Hungary. But because of the absence of wagon exports in the last financial year—the STC had banked on exports of railway equipment worth

Collieries' problems

MR Rasiklal Worah, President, Indian Colliery Owners Association, Dhanbad, says that the prospects of coal mines "seem to be gloomier". The production of coal during 1970 suffered a setback, perhaps for the first time during the recent years. The overall raisings declined by 3 million tonnes and despatches by as much as 6 million tonnes. The pit-head stocks have naturally registered a phenomenal increase of about 3 million tonnes to reach 9 million tonnes at the end of October 1970, compared to the corresponding period of 1969. The main reason for this piling up at pit-heads has been the inadequacy of wagons which was the result of indiscipline among railway employees, the policy of indecision on the part of the railway administration to tackle acts of indiscipline in time and sporadic strikes.

Wagons for coal

Coal Consumers Association of India, Calcutta, says that an unprecedented situation has arisen in the country due to the steady decline in the movement of coal by wagons. This has resulted in the closure of a number of industrial units consuming coal while many other large industrial units have been forced to curtail production. Unless the situation improves immediately, many more units will have to close down. One of the reasons for the present shortage of wagons is the recent slow-down in wagon production. In terms of four-wheelers the production of wagons has come down from 34,542 in 1964-65 to 14,918 in 1969-70. Similarly, there is no inter-railway co-ordination to move priority goods and make the best use of the available wagons. The Association suggests that the present system needs to be examined thoroughly and a new procedure should be evolved for the allotment of wagons for coal movement.

Wages linked to productivity

Mr N. S. Bhat, Chairman, Employers' Federation of Southern India, says that the rising cost of living index is a matter for deep concern. The Madras city consumer price index which stood at 774 in January 1970 shot up to 833 in December 1970. The magnitude of this problem would be appreciated fully when one realises that in a single industrial unit employing 12,000 workers, the additional dearness allowance that has to be paid in 1970 solely because of the rise in the Madras city consumer price index was Rs 30.5 lakhs. It is clear that the abnormally rising prices have helped neither the employers nor the labour. There will be no solution to this problem, says Mr Bhat, unless all wages including dearness allowance are in some form or other linked to productivity.

Madhya Pradesh mills

Mr Kailash Agrawal, Chairman, Madhya Pradesh Textile Mills Association, says that the textile industry in the State is caught in a very difficult situation by the unprecedented rise in

BUSINESS OPINION

cotton prices, poor offtake of cloth, unremunerative prices and stringent credit. The situation has become so difficult that one mill could not even make payment of full wages last month. The recent rise in the margin from 20 per cent to 40 per cent on advances on cloth by banks has aggravated the difficulties of the industry. Unless necessary steps are taken immediately the industry would find it difficult to keep on working.

Biscuit industry

Mr A. C. Khanna, President, Federation of Biscuit Manufacturers of India, Delhi, says that although the industry had no difficulty in obtaining its full requirements of wheat flour and sugar, for long periods in 1970 vanaspati was either not available or available only by paying a high premium. Several price changes were announced by the Government and the average price per kg in Bombay and Calcutta rose from Rs 4.84 to Rs 5.71. Skimmed milk powder was again in short supply owing to the complete ban placed on the import of this raw material by actual users. The average price of skimmed milk powder rose from Rs 4.48 to Rs 8.83 per kg. In almost all other items like butter, condensed milk, liquid glucose, etc there was a sharp increase in prices. The worst problem, however, has been the shortage of packing material such as cellophane. The price of tins also shot up as a result of the shortfall in the supply of steel.

Calcutta customs

Mr S. N. Dalmia, President, Merchants Chamber of Commerce, Calcutta, says that at the Calcutta Customs there is abnormal delay in issuing the show-cause memos, fixing the date and time for the personal hearing and in issuing adjudication orders in cases of alleged contravention of the Customs Act. The movement of files at the Customs House is too slow and often results in inordinate delays unless they are chased at different levels by the importers or their agents. Such chasings are likely to foster and breed undesirable effects which should be avoided. In many cases the importers are asked to paste the country of origin of invoice for the items of imports although copies thereof were already pasted on the relevant bills of entry. Again, in spite of ICT items being duly recorded in the bills of entry the importers are often asked to explain the declaration, the use of the material imported and catalogues etc. Mr Dalmia says these are unnecessary harassment. The division of work between the preventive officers and the examining officers at the dock also results in delays. The works of these two groups of officers should be co-ordinated as to enable them to jointly make the clearance of export goods quickly leaving enough time for loading.

Rs 8 crores during the year—it failed to reach its export target of Rs 75 crores.

The export losses of the Corporation in 1970-71 were about Rs 5.5 crores as against the budgeted estimate of Rs 0.6 crores. This was largely due to the export of jute fabrics at a loss in order to regain the markets lost to Pakistan. The subsidisation of sugar exports also contributed to the losses. On the import side, the entire profit on soyabean oil imports was passed on to the Food and Agriculture Ministry. Besides, the Corporation was directed to maintain the price of tallow, although the world prices of this item had risen considerably. All these resulted in the lowering of its profitability during 1970-71. The STC Chairman, Mr P. L. Tandon, does not envisage any improvement in the Corporation's profitability in the current year. On the other hand, he expects the profits to decline further as the Government is likely to insist on depressing the Corporation's profit margins on imports in order to hold the price line. Consequently the gross trading profit (including commission and other receipts) this year has been estimated at

Rs 13.7 crores as against Rs 16.54 crores in 1970-71.

The STC's performance budget for 1971-72 shows that the total sales will rise further to Rs 270 crores. Exports are expected to go up by 28 per cent to Rs 90 crores and imports by 25 per cent to Rs 175 crores. The Corporation has also tried to look further ahead. It has projections for 1972-73 according to which exports are expected to be around Rs 120 crores and imports Rs 190 crores. The STC is well set to reach the best standards maintained by world trading organisations. It has risen above the weaknesses which most public sector organisations are prone to. □

INDUSTRY

Management by objectives

CALCUTTA.

MR P. R. Kamani, who heads the Kamani group of industries, has described

how the change in the attitudes, values, behaviour and relationship had given birth to a new management philosophy in his organisation. Delivering Dr K. Nath Foundation Lecture at the Indian Institute of Management here recently, Mr Kamani has said that application of group management and behavioural sciences was the key to success in an industrial organisation.

Starting from a humble beginning about three decades ago, the Kamani Group today commands assets worth Rs 30 crores with an annual turnover of Rs 35 crores and large and increasing exports. Their activities range from transmission line towers to industrial jewels and they employ directly 10,000 and indirectly a lakh of persons. In the early stages, loyalty was the criterion for recognition and promotion while accountability and efficiency were only incidental. However, under a liberal labour management policy progressive measures like provident fund, gratuity and bonus were introduced even before they became statutory obligations.

In the mid-fifties many new challenges of the post-war and post-independent period came to be faced in the country. Fulfilment of essential and core projects and saving of foreign exchange underlined the need for diversifying production. This development threw open the doors of management to newcomers and younger men who could also have a say in the conduct of affairs. According to Mr Kamani, this was the first wind of change that was to sweep throughout his organisation in the subsequent years. A swing from autocratic and unilateral practices to group responsibility for policymaking was the result. At the same time the need for associating experts in financial management, administration, law etc was recognised. The first step in this direction was the setting up of a Central Management Committee composed of working Directors and the experts to deliberate on various crucial issues of organisation and management. Consequently considerable amount of expertise was inducted into the affairs which opened the road to ever-increasing knowledge and know-how.

With the development of clear management objectives, Mr Kamani pointed out how guiding principles of human dignity, non-exploitation, freedom of expression, management by agreement, and agreement by persuasion were adopted as the pillars of a new philosophy of business management. This completed the process of change from the narrow proprietary approach to broad and dynamic group working with a built-in system of safety in which, instead of succumbing to pressures leading to series of actions, constant pressure is generated within as not to be overtaken by circumstances.

Summing up, Mr Kamani referred to some important aspects of social experimentation in his organisation such as the human approach to the problem of management and the enormity of challenge in bringing about the needed quality of transformation through the exercise of patience, humility and capability of learning from the failures and disappointments. He said that in order to wear the cap of the agents of social change, we need in equal measures, a challenge of the task, a quiet confidence born out of sense of humility, and the goodwill of those who only stand and wait.

When Indian yarn and fabrics win praise abroad, ITPT join the textile manufacturers in taking a bow!

Because leading textile manufacturers in India, like Madhva Mills, Mafatlal Group, Lalbhai Group, Century Mills, Sitalakshmi Group and Visalakshi Group, rely on ITPT paper tubes for spinning and cones for winding their yarn.

Every year nearly 100 lakh kgs. of yarn wound round ITPT cones are exported. And a great deal of the fabrics exported are made of the yarn spun on ITPT paper tubes.

And when fabrics begin with ITPT, they are bound to be the best. Because, ITPT PLASTITEX ring spinning tubes have a fine finish for smooth spinning. Excel in dimensional stability. Last longer than any other tube on the market—without warping. Because ITPT tubes are chemically treated with a special formulation to impart resistance to steam and water when conditioning yarn. They invariably outlast guaranteed performance! And ITPT cones are vibration free.

ITPT make the widest range of paper cones and tubes. 6"15" cones; 3"30" cones; Cheese tubes, Sewing thread tubes; PLASTITEX ring tubes, Spiral tubes, etc.

THE INDIAN TEXTILE PAPER TUBE COMPANY LIMITED
(in collaboration with T. P. T. LIMITED, ROMILEY, ENGLAND)
REGISTERED OFFICE AND FACTORY: NO. 19, Peral Road, Post Box No. 3, VIRUDHUNAGAR.
Selling Agents: Messrs. T. T. KRISHNAMACHARI & CO.,
Madras, Bombay, Calcutta, Delhi, Secunderabad and Coimbatore.

Economics behind Bangla revolt

By Commerce Research Bureau

EVEN when in the heat of communal frenzy East Bengal threw in its lot with Pakistan in 1947, it was economically a backward area compared to the relatively prosperous western wing of Pakistan. One of the first areas to come under the British rule and to suffer the worst of colonial and zamindari exploitation during the two centuries of British rule, East Bengal was one of the poorest areas of the undivided India. In itself, this constituted a serious fissure in the structure of Pakistan. Had the leaders of Pakistan been honest about their professed concern for the interests of Muslims, they would have taken vigorous measures to reduce the economic disparity between the two wings. This, however, was never done.

From the very beginning, the eastern wing was regarded as a semi-colonial area. The intense attachment of the people of this area to the Bengali language, their failure to be worked up to a high pitch of anger over the Kashmir issue, and above all their very poverty created among the West Pakistanis a sort of contempt for the people of the eastern wing. Even the very small physique of the Bengalis evoked contempt from the so-called martial races of West Pakistan. At the same time, the West Pakistanis have always been enjoying an undisputed control over the state apparatus and economic affairs of Pakistan. No wonder, therefore, that the neglect of the economic interest of East Pakistan and even its exploitation for the benefit of West Pakistan has always been an integral part of the polity of the Pakistani Government, irrespective of whether it was democratic or dictatorial.

This contempt of the Pakistani leaders for the people of Bangla Desh began to be expressed from the very foundation day of Pakistan. The majority of the people of Pakistan—55 per cent—lived in East Pakistan and only the remaining 45 per cent in West Pakistan. Yet, it was not Dacca but Karachi which was then made the capital of Pakistan. The majority of the people of Pakistan spoke the Bengali language. Yet, in utter disregard of their strongly expressed feelings, Urdu was declared as the national language of Pakistan. The same attitude was reflected in the economic policy of the rulers of Pakistan.

The fact of neglect and even a substantial element of exploitation stands out boldly from all the data relating to the development expenditure or plan expenditure in the two wings throughout the last twenty years. Even if one were to apportion the development outlay only in proportion to population, East Pakistan should have been allocated 55 per cent of the total outlays. If, in addition, the policy purpose had been to reduce the economic disparity between the two wings, the share of the eastern wing should have been much more than 55 per cent. Yet, in the pre-Plan years (1950-51 to 1954-55), East Pakistan received only 31 per cent of the total developmental outlay. During the First Five-Year Plan period (1955-56 to 1959-60), its share was a little lower at 30 per cent. By this time, the protest movement in the eastern wing had assumed serious proportions. Under this pressure, in the Second Plan (1960-61 to 1964-65), the share of East Pakistan in the Plan outlay was raised to 45 per cent; but even this was considerably less than the rightful share of the eastern wing. As the protest from the eastern wing grew louder, this proportion was, at least on paper, further raised to 53 per cent when the Third Plan (1965-66 to 1970-71), was drawn up. However, according to an authoritative survey by the Ecafe secretariat, "Public sector development outlay in East Pakistan fell considerably short of the Third Plan target and the shortfall in private investment was even greater."

Turning to the data on fixed investment, the share of East Pakistan was only 34 per cent in 1959-60. The share came down to 32 per cent during the Second Plan period. Even in first period of the Second Plan, the share of East Pakistan was not larger than 31 per cent.

Thus, according to the *Handbook on Government Sponsored Corporations* brought out by the Pakistan Ministry of Finance, there were in all 25 such corporations. Of these, 22 were located in West Pakistan and only three in East Pakistan. Of the total authorised capital of Rs 200 crores of these corporations, the 22 corporations in West Pakistan account for Rs 187 crores, whereas the three corporations in East Pakistan account for Rs 13 crores only. A study of a variety of indicators of investment activity shows that, on an average, the per capita investment in East Pakistan was only about half the level of West Pakistan.

Exploitation

The neglect is, however, not the whole story. There is a positive evidence of clear exploitation of East Pakistan by West Pakistan. Let us begin with the public exchequer. As shown earlier, of the total developmental expenditure of the Pakistani Government only 30 to 40 per cent was

spent in East Pakistan. However, when it came to collecting the tax revenues, year after year, more than 50 per cent of the tax revenues was collected from the relatively poor people of East Pakistan. An important resource of an economy is its foreign exchange earnings. Here, while East Pakistan has consistently earned more than half of the foreign exchange obtained by commodities export, it has all along received less than one-third of commodity imports. More than two-thirds of the imports went to West Pakistan. It has been noted by many independent Western economists that there the two provinces shared quite unequally in the inflow of foreign capital which accelerated so rapidly in the Second Plan period.

In a recent study of the economy of Pakistan, sponsored by the OECD, Prof Stephen R. Lewis notes that East Pakistan financed all of its provincial investment from provincial saving. He also notes the flow of income from East Pakistan to West Pakistan. His overall conclusion is worth quoting in full.

"In other words, the poorer province was quite possibly financing the development of the richer province. If this situation were true also of the 1950s, and the trade figures suggest that the situation

was even worse in that decade, the widening spread between income levels in the two provinces is more easily understood. These artifacts of economic performance appear to show the transfer of real resources from East to West Pakistan." (*Pakistan: Industrialisation and Trade Policies*, London, 1970, p. 147). He further adds: "The policies pursued by the Government of Pakistan in the 1950s appear to have drained resources away from East Pakistan, which was a poorer province to begin with, and widened the gap in production *per capita*. The transfer of resources that occurred in the 1950s was of primary importance in enabling the industrial sector located in Karachi to expand rapidly" (*ibid.*, p. 158). This process of exploitation could not but further impoverish the poor people of the eastern wing.

Trends in income

Expectedly, the results of this process proved disastrous for the East Pakistan economy. On the other hand, West Pakistan prospered at the cost of East Pakistan. According to the data published in 1964 by the Government of Pakistan in *Outline of*

the *Third Five-Year Plan: 1965-70*, during the 14-year period between 1949-50 to 1963-64, the *per capita* real income of East Pakistan rose by 8 per cent. During the same period, the *per capita* income of West Pakistan increased by 11 per cent. Thus, the gap between the two wings widened during this period.

Making use of more up-to-date data in the OECD study mentioned earlier, Prof Lewis concludes: "In looking at the entire 15-year period preceding 1964-65, one can see that there was little if any *per capita* gain in real product in East Pakistan, while in West Pakistan real product *per capita* rose at 1.5 per cent per year" (p. 139). He further notes differences in the price structures of the two provinces and adds that if due adjustment is made for this factor, the disparity in the real

income of the two wings would be greater than indicated by the data quoted earlier. The same conclusion was fully corroborated in a note prepared early this month by three top American experts, namely, Edward S. Mason, Robert Dorfman and Stephen Margolin.

Given the high degree of poverty and exploitation, other unfavourable features of the East Pakistan economy can be well imagined. Some of the key indicators highlighting the inter-wing disparity are presented in the accompanying table. What the figures cannot reveal, however, are many other concomitant features of a semi-colonial life. Thus, for example, just because the people of the eastern wing were ill-fed and ill-educated and above all just because they were Bengalis, they were denied opportunities of economic advancement in business, professional services, civil government services and above all, in the defence services. As is well-known, more than four-fifths of the Pakistani army is recruited from the western wing. Top military posts are always reserved exclusively for the upper-classes of the western wing. Add to all this, the more-than-average quota of unemployment, disease, illiteracy and sheer hunger and we have all the elements of an explosive situation which has recently burst into a full-fledged war of national liberation.

Destruction

All wars and civil wars are by their very nature destructive. But the destruction which is now being wrought in Bangla Desh since March 25 is truly unparalleled. The Pakistani army has launched upon a system campaign not only to kill people on a mass scale but also to destroy economic assets of the country on a wide scale. Residential buildings, educational institutions, factories, mills, radio stations are all being systematically destroyed. Destruction of economic assets on such a scale would prove grievous for any nation. It would be all the more so for the poor Bangla Desh. Since economic backwardness was the main grudge of the eastern wing, the Pakistani army is apparently trying to ensure that the Bangla Desh economy should lie prostrate for decades to come.

Immediate problems

A number of economic problems of immediate importance are developing in Bangla Desh and they are likely to assume serious proportion in the coming months.

(1) Even in normal times, the eastern wing has a deficit in foodgrains which is made up by imports. Since the beginning of the civil war, the Pakistani authorities have been reportedly diverting food ships originally meant for the Bangla Desh. Besides there has been destruction of the food crops in the current conflict. Widespread famine conditions are, therefore, likely to develop in the coming years. According to an estimate by Mr Iain MacDonald, East Bengal Relief Co-ordinator for Christian Aid, OXFAM and War on Want, about 15 lakh people are right now facing starvation in the region. Further, insofar as the current conflict continues to hamper cultivation, the next crop to be harvested in November would be correspondingly small. Thus, food shortage would be the major problem of the region.

(2) Because of mass killings and dead corpses rotting in the open, sanitation is in

a bad state. It is only a matter of time before serious epidemics develop.

(3) The economic inter-change between the cities and the villages has practically broken down. There is a similar breakdown of inter-change of agricultural commodities for industrial commodities. An acute scarcity of all types of goods—and particularly consumer goods—has already begun. It would grow more and more serious in coming weeks.

(4) With the closure of the banking business and the loss of confidence in the currency, there would be a serious shrinkage of monetised transactions. There would be a temporary relapse to a barter economy with all the implied dislocation of the functioning of the economy.

India's task

Even though the current conflict in the Bangla Desh was not asked for by India, India would have to face a number of difficult tasks in this connection. These tasks can be broadly divided under two heads. First, India would have to take up a substantial task of the relief operations. Whatever the legal framework of relief and *modus operandi*, India would have to provide large quantities of foodstuffs, medicines and other necessities of life. This would constitute a serious drain on the limited resources of the country. The task of organising the supply of these commodities would call for considerable advanced planning and organisation. Secondly, there would be the problem of refugees from Bangla Desh trekking across about 1,000 miles of the common land border.

The problem of the re-settlement and probably some repatriation at a later stage is likely to be much larger than we can imagine today. The problem is not only economic but also political. On all these a long view would have to be taken. There would have to be detailed advance planning and even the setting up of at least the nucleus organisation to tackle these and other cognate problems.

All in all, these and other related problems would be far beyond the economic capability of India. And in fairness, it would be wrong to expect that just because India has a peculiar geographical position *vis-a-vis* Bangla Desh it should take up the entire responsibility flowing from a crisis which is not all its making. Judged by any standard both these problems—providing relief to Bangla Desh and taking care of refugees from that region—are international problems. It is undoubtedly the collective responsibility of all the nations of the world.

Future of Bangla economy

Whatever the result of the struggle of Bangla Desh for its freedom, its struggle for economic regeneration is likely to be agonisingly long and difficult. Even if there had been peaceful transfer of power, the people of the Bangla Desh would have been handicapped by several unfortunate features of their economy. The first such feature is the extremely high level of poverty made all the more intractable by a lop-sided and heavily agrarian economy. Large-scale manufacturing accounts for only 8 per cent of the GNP. Even as regards agriculture, it is a mono-crop economy. Rice accounts for about 85 per cent

Indicators of disparity between East and West Pakistan

of the cropped area and jute accounts for another 5 per cent. Diversification of the agriculture is thus negligible: besides, the fields are low.

Long-term prospects of the economy of Bangla Desh would in part also be affected by the fact that the natural resources-base of the region appears to be inadequate to support an ambitious programme of industrialisation. Looked at from this point of view, the most important raw material of Bangla Desh is raw jute. But as is well-known, the world market conditions would not permit any large-scale expansion of jute industry in Bangla Desh. The next important natural resource is forest. The available forest resources would permit moderate development of paper and wood product industry.

Finally, we may mention the Sylhet gas and the hydro-potential around Chittagong. But these are very limited. There are no other sources of power; in particular, there is no commercially exploitable good quality coal. There are no known reserves of metalliferous ores; there is not even sufficient quantity of stone and lime-stone for building and cement industry. Even salt is at present imported from the far away West Pakistan. There is a vast coastline. Because of innumerable estuaries and islands, it is impossible to measure how long the coastline of Bangla Desh is. But much of the coastline is marshy and saline—good for no purpose. Reclamation of these marshy lands would need resources on a fantastic scale.

The Bangla Desh would, therefore, have to fall back upon agriculture, at least in the early stage. The soil is excellent. This is the greatest asset of Bangla Desh. In absolute terms, rainfall is more than adequate—about 80 inches on an average. But this rainfall is badly distributed. Hence, we have the tragic spectacle of devastating floods in monsoon and scarcity

of water for agriculture within a few months thereafter. This cycle is made all the more tragic by frequent visitations of cyclone from the Bay of Bengal.

Braving all these, the Bangla Desh would have to consolidate its agriculture first and then develop the resources and the market for industries, many of which would have to depend on imports so far as non-agricultural raw materials are concerned. Needless to add the cropping pattern of Bangla Desh would have to change. The market for raw jute is likely to shrink within about two decades if not one. This would rob the Bangla Desh farmer of his only cash crop and his country of most of its foreign exchange earnings. Measures would, therefore, have to be taken to bring about a gradual, planned shift to other suitable cash crops for which there is adequate demand in the world market. All this is easy to suggest but difficult to do. Yet, it would have to be done sooner or later.

Economic relations with India

Only a couple of decades ago, the economy of Bangla Desh was an integral part of the economy of India and that of the undivided Bengal in particular. Thus, the jute producing farmers of East Bengal and

jute mills of Calcutta supported each other mutually. When, following partition, both these were cut off from each other, life was hard for both of them. What was true of jute was also true of the entire economy of undivided Bengal.

During the last two decades, under administrative pressures, an artificial integration was established between Bangla Desh and the western wing of Pakistan. However, artificial and exploitative this interwing trade may have been, it formed the basis of the functioning of the economy of the eastern wing. With the disruption of the ties with West Pakistan, new trade links would have to be forged as quickly as possible. Bangla Desh exported goods worth about Rs 100 crores to the western wing—mainly tea, jute goods, paper and board and matches. It imported goods worth about Rs 150 crores a year from the western wing—mainly, cotton fabrics and yarn, raw cotton, foodgrains, oilseeds, tobacco, cement, machinery, drugs and medicines. Obviously, India would have to fill this vacuum in the external trade of Bangla Desh. Establishment of new trade links with India would be of great benefit to Bangla Desh because that would help cut the unnecessary heavy freight cost of transporting goods over the long sea route between the two wings of Pakistan.

Finally, we may note some important facets relating to world trade in jute manufactures. Production of raw jute in Bangla Desh is likely to be adversely affected in the next season. In fact, the problem is immediate because following the outbreak of the civil war, jute supplies from East Pakistan to the world market have been abruptly and completely stopped. The prices for raw jute as well as manufactures are shooting up. Of course, for the time being this means larger exports for India and better profits for jute farmers and jute mills. But it would be only short-sighted to overlook the disturbing long-term implications of the present shortage of jute. As is well-known, slowly but steadily, a process of substitution of raw jute by synthetic packaging materials has been going on for the last two decades or more. This has cast a dark shadow over the future of the entire jute industry as well as over the jute farmers. The larger the increase in prices of raw jute and jute manufactures in the coming months, the faster would be this process of substitution. In view of these serious implications of the present shortage of jute all interested parties from India and Bangla Desh would have to get together to formulate a well-thought-out strategy vis-a-vis the present supply-demand position of jute. □

The sugar industry: A survey

Need for a long-term policy

by S. K. SOMAIYA

THE sugar industry is the second largest industry in the country next in importance only to the cotton textiles industry. With its economy is closely linked the welfare of millions of cane growers particularly in the States of UP and Bihar, where sugarcane is the only cash crop. The industry provides employment to more than two lakh skilled and unskilled workers. Its contribution to the Central and State exchequers is of singular dimensions. In spite of all these, the industry's growth and development have suffered for lack of a stable and long-term Government sugar policy. This had also resulted in wide variations in production from time to time and in creating unstable conditions in the industry. No doubt, in an agro-based industry such as sugar, whose main raw material is sugarcane—a highly perishable commodity—some variation in output depending on climatic and other factors can hardly be avoided. But in the absence of a long-term sugar policy such variations had been aggravated. The efficacy of a policy, however well conceived, can only be judged over a period. Abrupt and frequent changes in the sugar policy guided by short-term considerations was not in larger interests and had undermined the long-term objectives.

Viewed against this background, continuance of the policy of partial decontrol for the current season 1970-71 is a welcome step in the right direction. The policy of partial decontrol was first initiated in the season 1967-68 and has since been continued with slight modifications in the levy and free proportions. While in the 1967-68 season the proportion of levy and free sugar was 60:40, in the 1968-69 and 1969-70 seasons it was changed to 70:30. Again for the current season, 1970-71 levy and free proportion has been changed to 60:40. These minor modifications apart, basically the policy of partial decontrol remains the same and it has been now continued consecutively for the past four seasons. Hence, this will provide the much-needed continuity and stability in the Govern-

ment's policy. However, the policy should have been re-enforced in the light of the experience gained about its working in the preceding seasons.

It is common knowledge that the sugar industry has established an all-time record in production during the last season 1969-70 at 42.6 lakh tonnes. This has resulted in huge carry-over of nearly 21 lakh tonnes with the industry at the end of the last season. Further, production this year is also expected at about 38 lakh tonnes. Thus the total sugar availability in 1970-71 would be of the order of 59 lakh

tonnes. No doubt, during the first five months the offtake of sugar during the current season has been better as compared to the last season. Thus the total offtake during the season 1970-71 is estimated at about 37 lakh tonnes as against 32.64 lakh tonnes. The total offtake is expected to be about 40.5 lakh tonnes, leaving closing stock of about 18.5 lakh tonnes at the end of the season. The sugar market, however, continues to remain depressed. The lifting of levy sugar by Government nominees, particularly in high-stock zones, also continues to remain sluggish.

Continuance of such a situation is hardly desirable and there is urgent need for restoring steady conditions in the sugar market. This could be done by the Government implementing its scheme for building up buffer stocks of sugar as re-

peatedly urged by the industry and also assured by the Government from time to time, for which there cannot be a better opportunity. Besides this, the Government should also do away with the differential rates of excise duty on free and levy sugar. It is well known that the higher rate of 37.5 per cent *ad valorem* excise duty was levied on free sugar on the ground that such sugar was selling at much higher rates. This position no longer holds good, and for a considerable time now free market prices have registered a sharp decline and the actual realisations of the mills in most of the regions are, therefore, even lower than their levy prices. In these circumstances, there is hardly any justification for continuing with the differential rates of excise duty, specially when the Government can duly derive their budgeted revenue even with a uniform rate of 25 per cent duty on the entire sugar, in view of the increased offtake from the mills. Now that the next budget is in the offing, it is hoped that the Government would give due consideration to this matter and excise duty will be

levied on the entire sugar—levy and free—at the uniform rate of 25 per cent.

Another disquieting development which is causing particular concern to the sugar industry is the action of the Government of India in not revising the provisional levy prices notified for the 1969-70 season and continuance of the same prices for 1970-71. It has been the accepted policy of the Government to announce the provisional levy prices for sugar on the basis of the estimated duration of the season and the recovery percentage and other costs at the beginning of every season and announce the final prices after the close of the season on the basis of the actual working results of factories. Curiously enough, this year the Government has followed a different policy. Not only has it not announced the final levy prices for the 1969-70 season knowing fully well the various increases in costs that had taken place since the announcement of the provisional levy prices for the season, it has also continued with the same uneconomic levy prices for the season 1970-71. Inadequate availability of bank credit to the

industry has further aggravated the financial hardship of sugar factories.

While the Reserve Bank of India is generally appreciative of the need for additional credit by the sugar industry this season to finance comparatively larger stocks and is reported to have issued directives for allowing the same proportionate expansion in credit as in the preceding season 1969-70, in actual practice even this is not being sanctioned by the branches of the various commercial banks due to procedural delays. During the last season 1969-70, too, due to such procedural delays the industry was put to severe financial strain. In the context of the existing system of cane payments within a fortnight from the date of purchase of cane, prevalent in India, while the stocks of sugar have to be carried by the mills for much longer periods—anywhere between 12 to 16 months—it has to be appreciated that sanction of adequate credit to the sugar industry is a must to enable it to maintain regular cane payments.

Another important sphere of Government policy for the sugar industry is about licensing of capacity. It is common knowledge that production of sugar is mainly conditioned by adequate availability of good quality of cane to the factories. During seasons of abundant cane supplies, even with relatively lower capacity much higher output has been achieved while there have also been lean years when even the capacity established could not be fully utilised. This being the position, it should be appreciated that in an agro-based industry like sugar, greater emphasis has to be laid on the adequate availability of its main raw material, sugarcane, which is a perishable commodity, to achieve the desired output.

It is, however, unfortunate that this aspect of the matter does not seem to have received adequate attention of the Government. On the other hand, it has continued to license additional capacity in the industry. The Fourth Plan target which was originally fixed at 45 lakh tonnes has been subsequently revised to 49.65 lakh tonnes just to accommodate the demand of a few State Governments for additional capacity, and most of the capacity has already been licensed. Judged by the trend of increase in consumption, and also taking into account our exports which are limited under our quota of 3.5 lakh tonnes, the targeted capacity of 49.65 lakh tonnes appears to be excessive. While this is the position, the Government has also relaxed the licensing provisions under which no licence is required for investment up to Rs 1 crore. It is not unlikely that, taking advantage of this, more capacity may come into being. Undeniably, this will even vitiate the targeted capacity, which is not desirable. It is, therefore, felt that the sugar industry should also be categorised among the few such industries that have been kept outside the purview of the above exemption.

SUGAR
FOR
HOME CONSUMPTION
AND FOR
EXPORT

As one of the Country's leading producers of Sugar, we are proud of our contribution to national progress and prosperity

THE GODAVARI SUGAR MILLS LIMITED
BOMBAY I

Crucial year for sugar exports

M. L. APTE

THE year 1971 is very crucial for sugar exports. The entire edifice of the international trade in sugar, both free and preferential, is likely to undergo some changes. The International Sugar Agreement, which has been in operation since 1969, will be reviewed by the end of this year. Similarly, the US Sugar Act 1948 which provides for allotment of quota to

Mr Apte is Chairman of the Bombay Regional Committee of the Indian Sugar Industry Export Corporation Ltd

various countries is due for revision this year. The quota arrangement under the Commonwealth Sugar Agreement is to run till 1974. However, with UK's move for joining the European Economic Community, the question how and in what way the interest of the Commonwealth sugar producers can be safeguarded has assumed immediate importance.

The developments during the year will have profound impact on the national sugar policies of leading exporting and importing countries. Being associated with all the above arrangements, India too will be affected.

Our exports have to be limited to quotas fixed under the International Sugar Agreement, Commonwealth Sugar Agreement and the US Sugar Act 1948. Presently quotas available to India for exports are as indicated in Table 1.

The effective quota for 1971 under the International Sugar Agreement has for the present been established at 110 per cent of the basic quotas, which in the

case of India comes to 2,75,000 tonnes raw value. Another 5,798 tonnes raw value has been allocated out of shortfalls. In terms of Indian sugar the total ISA

Table 1: Quotas available for India for exports

	Tonnes
Basic quota under International Sugar Agreement	2,50,000*
Negotiated price quota	25,400
US quota	70,75,000†
	3,45,400†
	3,50,400

* Subject to variation either way depending on the level of world prices.

† Quantum is subject to variation depending on the consumption requirement in USA.

quota comes to about 2.62 lakh tonnes. The US quota has been fixed at 77,986 short tonnes raw value, which in terms of our sugar will be about 68,266 tonnes.

The Commonwealth NPQ quota for India stands at 25,400 tonnes. Taking into account that there may be further allotment by way of shortfalls in ISA quotas and increase in the US quotas during the course of the year, the total export quantum in 1971 is expected to be between 3.75 lakh tonnes to four lakh tonnes.

Compared to other major exporting countries, India's sugar exports account for a small percentage of her production. While exports of other major exporting countries in 1969 ranged between 25 to 88 per cent of their production, India exported only 1.36 per cent of her production. In 1970, when the entire quota was availed of, the exports accounted for about 8 per cent of production. In 1963, when a maximum of about five lakh tonnes was exported, the export as percentage of production was about 20.55. The production target for sugar in the Fourth Five-Year Plan has been set at 47 lakh tonnes with provision for an export quantum of five lakh tonnes. To achieve this export target, there would have to be an increase of over 15 lakh tonnes in our basic export entitlements. India must therefore make a determined bid for substantial increase in ISA and preferential quotas at the time of impending reviews.

In spite of year-to-year fluctuations there has been a spectacular growth in sugar production in India. From about 30 lakh tonnes in 1960-61 the production has increased to 42.6 lakh tonnes in 1969-70. Thus, India has been presently placed in a very happy position inasmuch as, at a time when various trade arrangements are due for revision, and when world supply/demand position is gradually tightening up, she has enough exportable surplus. The two successive good crops have vastly changed the sugar supply position as reflected in Table 2.

Production during the current year 1970-71 is estimated at about 40 lakh tonnes. The total availability during the year will thus be about 50.6 lakh tonnes for

are you thinking about
sugar machinery?
WALCHANDNAGAR
is the answer

At WALCHANDNAGAR, we offer a package deal of Planning, Designing, Manufacturing, Erecting, Commissioning and after-sales services

Because we know sugar plant machinery like the back of our palms.

We have the know-how, experience and expertise in sugar plant machinery. WALCHANDNAGAR have designed and installed several complete plants here in India, have also taken up execution of turnkey sugar factor / project in foreign countries.

Come to WALCHANDNAGAR when you need advice on Mills, Boilers, Centrifugals, Gears or any other machinery, and get to know our specialities.

In Centrifugals, our improved design suspension offers better stability, fluid coupling drive enables the use of simple Squirrel Cage Motor and reduces the high current peaks of starting; use of superheated wash water offers better crystal clarity.

Your sugar plant and machinery are in good hands when entrusted to WALCHANDNAGAR.

Call on us next time you think of Sugar.

A WALCHAND GROUP INDUSTRY

about 5.5 lakh tonnes more than the previous year. This underlines the need to look for additional outlets by way of more exports and larger consumption. It is also the time to give concrete shape to the scheme of creating buffer stocks to take care of fluctuations in production in the years to come and to maintain continuity in the level of our exports.

The International Sugar Agreement has run remarkably smoothly since its reinforcement in 1969 after a lapse of about seven years. It has succeeded fairly well in its main object of stabilising the world prices at stipulated levels, Table 3, showing the average of the London daily price and the spot of Contract No 8 of the New York Coffee and Sugar Exchange and also the high and low points recorded during the last six years, reflects the position of prices since the Agreement was reinforced in 1969 as compared to the earlier years.

In the circumstances the tendency naturally will be to resist any change in the pattern of basic quotas for the coming years. However, with the tightening statistical position of supply and demand and the continuous rise in the world sugar consumption by about 3.5 per cent per annum some marginal increase in the basic quotas cannot be ruled out. In 1970-71 a shortfall of about 1.5 million tons is estimated in the world sugar output, which is placed at 71.5 million tons as compared to 72.0 million tons in the previous season. The consumption during the corresponding period is expected to exceed production by about three million tons. If this trend continues, production will have to increase by about 5.5 million

Table 3: Average London and New York prices

Year	LDP (CIF pound sterling per long ton)			Spot No 8 (FOB US cents per lb)		
	Average	High	Low	Average	High	Low
1970	40.39	45.00	30.00	3.75	4.33	2.85
1969	33.83	39.25	27.50	3.37	4.08	2.70
1968	21.83	31.00	16.00	1.98	2.95	1.37
1967	19.36	32.00	12.25	1.99	3.10	1.23
1966	17.87	24.25	13.25	1.86	2.60	1.34
1965	21.50	26.75	17.75	2.12	2.91	1.60

tons in 1971-72 if consumption requirements are to be met without further erosion in stocks. This statistical position is most likely to be taken note of while reviewing the Agreement and there is a possibility of upward revision in the overall basic quotas.

Ever since Cuba ceased to be a supplier to the US market in 1961, quotas have been granted to a large number of countries. Presently as many as 31 countries supply sugar to the USA. Of the total annual import of about four million tonnes, 3.5 million tonnes or about 87.5 per cent is supplied by the countries in the Western Hemisphere and the Republic of Philippines and only about a half million tons or 12.5 per cent by rest of the countries including India.

The US Sugar Act 1948 was last amended in 1965 incorporating the basis on which the proration of quotas between

the domestic beet and cane sugar producers and various foreign countries would be made during the years 1966 to 1971. In order to ensure continuity in supplies from 1972 onwards a new legislation is already under consideration of the US Administration.

As the realisations from supplies to the USA are comparatively higher than realisations from other destinations, not only the individual quotas will be fiercely defended, most likely there would be some new contenders for quotas also. Besides, the powerful US beet and cane sugar interests will, as in the past, press for a larger share.

It is difficult to predict at this stage the chances of India getting a higher allocation. However, ever since 1961, when India entered the US market for the first time, she has complied with her quota obligations fully. Besides, with her spec-

tacular success in sugar production, she is now in a much better position to ensure continuity in supply, which is among one of the main objectives of US sugar policy. A high-power delegation is proceeding to USA to advance India's case for a larger allocation and it is only to be hoped that our efforts will meet with success.

Under the Commonwealth Sugar Agreement the UK is committed to buying till 1974 from the exporting members about 1.4 million tonnes at a reasonably remunerative price. Of this India's quota is 25,400 tonnes. This price is reviewed triennially on the basis of cost data supplied by the exporting countries. The developing countries including India are also allowed a two-tier preference consisting of a fixed element of £110.0 per long ton and a variable element up to a maximum of £210.0 per long ton related inversely to the world price. The present basic price is £43 per long ton f.o.b. and stowed. The triennial review of this price is due at the end of this year and the price as may be determined will remain in force for the next three years.

Previously every year the Agreement used to be extended by a further one year so as to remain in operation for the next eight years. However, in 1965 the duration of the Agreement was limited to 1974 with a stipulation that, should the UK become successful in joining the EEC, she will be under no obligation to consider extension of the Agreement beyond 1974,

though she would try to protect the interests of the Commonwealth sugar producers.

Negotiations are under progress for the UK's entry into the European Economic Community. The UK Government's first statement to the EEC listing the problems to be tackled includes the Commonwealth Sugar Agreement. No mutually satisfactory solution has so far emerged. Meanwhile the EEC members have decided among themselves to allow the Commonwealth Sugar Agreement to run its full course, which means till 1974 the Commonwealth sugar exporters will continue to enjoy the preferential tariff in respect of their sugar exports to the UK. Beyond 1974 the EEC has kept its options open.

However, the Commonwealth countries in Africa have been offered three alternatives: (1) association under the Yaounde convention, (2) agreement of the Urusha type, and (3) simple trading agreements. Even this gesture has not been shown to other members of the Agreement such as India, Australia, Fiji, etc. The whole issue is in a state of flux.

Presently the EEC has a surplus of home-produced beet sugar and has imposed restrictive levy on cane sugar imported from the associated countries. With the admission of the four new applicant countries, namely, the UK, Ireland, Norway and Denmark, who import almost half of

their sugar requirements, the enlarged Community will fall short of sugar supplies. Such a situation is likely to lead to some mutually advantageous arrangement between the EEC and the Commonwealth sugar producers. India should try to enlarge her quota to the maximum extent possible.

While the long-term objective should be to get larger basic quota allocations, India must immediately try for some allocation from the Hardship Quota available under the International Sugar Agreement. The Dominican Republic and Thailand have already got 17,000 tonnes and 10,000 tonnes respectively from this quota. Further, in special cases of hardship, under Article 56 of the International Sugar Agreement, the exporting members are allowed to exceed their export entitlements. The Dominican Republic and Thailand have already been allowed to exceed their entitlements by 60,000 tonnes and 35,000 tonnes respectively. There is no reason why India should not take advantage of this provision when the country faces the problem of almost unmanageable sugar surplus.

A large tonnage of sugar is imported by various countries for non-human consumption such as animal feed. Exports for non-human consumption is outside the purview of the International Sugar Agreement. India should also explore the possibility of exporting sugar for non-human consumption.

Co-op sugar factories in Maharashtra

D. S. WAGH

EMERGENCE of strong dynamic sector of co-operative sugar factories in Maharashtra during the last decade or so is probably the most remarkable development in the field of agricultural processing in our country. About 70 per cent of our population is dependent upon agriculture for its livelihood. But the agriculture is inhibited by many factors such as dependence upon nature, uneconomic size of holding, lack of adequate and timely inputs, social barriers etc. The conditions of the farmers with assured supply of water might be expected to be much secured but it is not so. The farmers of land with assured water supply put in matching efforts in terms of proper land preparation, use of quality seed, fertilisers, insecticides and pesticides etc. This requires borrowings on large scale. But the cane production of the soil does not fetch just price in the Gur market which fluctuates violently due

Mr Wagh is Chairman of the Maharashtra Rajya Sahakari Sakhar Karkhana Sangh Ltd, Bombay.

to forces of supply and demand and the situation is further aggravated by the unholy nexus of money lender-trader-urban interests. The exploitation by the latter drains away surplus of the secured area and development cannot proceed beyond a point.

How sugar co-operatives came into existence? The condition of the cane growers in irrigated areas in Nagar, Poona and other districts was pitiable. It was not uncommon in years of abundance, for the large number of cane growers to go abegging from factory to factory pleading with the owners to accept their cane and selling it at whatever fancy price the owners desired. The farmers failed to get even the bare cost of cultivation for their produce and found themselves impoverished overnight. This situation led influential Co-operators and social workers headed by Dr D. R. Gadgil and Mr V. E. Vikhe-Patil in December 1945 to conceive of the idea of starting a sugar factory on co-operative lines in Shrirampur taluka in Ahmednagar District. In this way the first co-operative sugar factory was erected and commissioned in 1950, after overcoming enormous initial difficulties some of which were almost insurmountable.

With this modest beginning in 1950, the co-operative sector in the sugar industry has grown rapidly and has today emerged as a formidable force with as many as 30 co-operative sugar factories in production and as many as 18 newly licensed factories being rapidly erected and likely to be commissioned in the next two or three years. Besides about 20 to 25 co-operative sugar factories with capital investment of not more than 1 crore of

rupees each are coming up in this State. This State might secure leading position in sugar production in our country. The success of the co-operatives can be judged from the fact that during the year 1969-70; the production of sugar from these co-operatives was as much as 7.45 lac tonnes out of the total sugar production of 10.42 lac tonnes of Maharashtra State. In terms of the total all-India production in 1969-70, the share of the Maharashtra sugar co-operatives was as much as 17.5 per cent.

What is particularly striking is the fact that out of 13 joint stock sugar factories in this State, as many as 3 have recently been brought into the co-operative fold and it is expected that some more units would follow suit soon.

Sugar Experts of our country are agreed that in order to achieve maximum success for the Industry, it is essential that the sugarcane should be crushed as early as possible after it is harvested. The grower of sugarcane should be completely loyal to the factory and should ensure that all the cane grown by him is supplied to the sugar factory and is not diverted for production of alternative sweetening agents viz, jaggery and kandsari. By its very structure and nature, the sugar co-operative has ensured that both these essential aspects are given maximum attention. The Tariff Commission found that in the worst year of short production of sugarcane in the decade viz, 1966-67, the factories in Maharashtra utilised as much as 96 per cent of their plant capacities as compared to less than 60 per cent in other sugar producing States of our country.

The distinguishing feature of the sugar co-operatives in Maharashtra is the fact that there is perfect economic democracy in the running of the concern. Each member-cultivator is entitled to only one vote irrespective of the quantity of cane he grows or the number of shares he holds in the sugar co-operative. Secondly, since every member-cultivator is assured of a uniform price for his cane irrespective of the distance of his field from the factory, there is no discrimination of any kind among the members. Thirdly, the sugar co-operatives generally lay lesser stress on making profits and maximising dividends, and instead pay the maximum possible price for sugarcane irrespective of the minimum price fixed for cane by the Union Government.

Thanks to the excellent rural leadership in charge of the sugar co-operatives it has been possible for each of them to not only bring prosperity to the member-cultivators but also implement in a large measure the social objectives laid down in their bye-laws by construction of roads, hospitals, schools, colleges, etc. The sugar co-operatives have become catalytic agents to trigger off a chain reaction of growth not only in the industrial but also in the economic and social spheres of the rural areas concerned.

A remarkable feature noticed in recent times in co-operative sector is that within a period of four or five years of the commissioning of each factory, the institution through the medium of a well conceived and inbuilt mechanism starts accumulating deposits and funds not only from its profits but also by regular collections from individual cultivator-members. These are utilised for repayment of instalments of long-term loan capital and for starting ancillary industries. In several cases these amounts have also been utilised for large-scale irrigation projects implemented on a co-operative basis, with a view to extending the irrigation facilities to the dry areas. Resources have been utilised for sponsoring diverse agro-industrial ventures such as poultry and dairy farming, hard board, tractor and truck co-operative societies, solvent extraction plants, etc.

It has been possible for the small agriculturist who has prospered through the medium of the sugar co-operative to contribute his mite to raise the standard of living of his less fortunate brethren living in the areas of operation of the sugar co-operative which normally extends over a radius of 15 to 20 miles from the site of the factory. A welcome development in this context is the sincere realisation of co-operative ideals by these co-operatives which have come to the aid of victims of natural calamities and have also helped to finance the starting of newly licensed sugar co-operatives in various backward areas of the State. Thus, during the last two years alone, the co-operatives have committed payment of as much as Rs 83.95 lacs to the Koyna Relief Fund to aid victims of a severe earthquake and Rs 240.68 lacs to the Apex Co-operative Bank, in the form of contribution to the "Rural Debenture Scheme" from which it is proposed to finance the newly licensed sugar co-operatives in the State.

The success story of the Maharashtra sugar co-operatives has generated enthusiasm in other States which send study teams to Maharashtra. The origin of the agitation for co-operativising all sugar

factories in several northern Indian States, now raging in the country may be traced partly at least to the excellent success achieved by the Maharashtra Sugar Co-operatives!

The sugar co-operatives of Maharashtra are assisted in solving their major problems relating to the running of the Industry as well as relating to cultivation of the sugarcane and a host of other problems faced by them from time to time by the Federation of Sugar Co-operatives of Maharashtra.

The sugar co-operatives have earned immense foreign exchange for the country through export of sugar. The sugar exported from India is wholly from factories in Maharashtra State, since the last several years. During the sugar year 1970 (January to December 1970), the Maharashtra sugar co-operatives have exported a total quantity of 2.35 lakh tonnes out of the total sugar exports from the country of 3.18 lac tonnes, which works out to about 75 per cent of the total sugar exported by our country.

The sugar co-operatives in the State are laying emphasis on improving sugar and sugarcane production and technique. Vigorous efforts are also continuously being made to try out the newer varieties

of cane evolved by the Sugarcane Research Institute at Coimbatore.

The sugar recoveries achieved by sugar co-operatives in Maharashtra have always been the highest in our country during the last decade. Almost every sugar co-operative in Maharashtra has within two or six years after its being commissioned gone in for expanding its capacity to cater to the increased cane availability created through its own efforts. In fact one of these units in Sangli district has been recently given a licence for expanding its capacity to 5,000 tonnes of cane per day and bid fair to become the largest sugar factory in our country!

The sugar co-operatives have shown what thousands of small agriculturists (over 83 per cent of the cultivator-members hold only 3 acres or less sugarcane lands) can achieve, provided they have the will to work in co-operation, and the Government policy is helpful.

The crucial role of the Apex Co-operative Bank of Maharashtra in the success achieved by the sugar co-operatives also need mentioning in this context. The Bank has from the very inception given every possible help and guidance, both administrative and financial, to the sugar co-operatives.

Growth of sugar industry (1964-65 to 1969-70)

Year	No. of factories in operation	Average daily crushing capacity (Tonnes) per factory	Total* daily crushing capacity ('000 tonnes)	Sugar production (Lakh tonnes)

EXPORT ANGLE

By Stevedore

Kamanis and Telco honoured

THE Federation of Indian Chambers of Commerce and Industry this year has presented the awards it has instituted for outstanding export performance to Kamani Engineering Corporation Ltd, Bombay and Tata Engineering and Locomotive Co Ltd, Bombay. These are well deserved tributes to the two companies which are in the forefront of exports of engineering goods.

As FICCI has said, the Kamani Engineering Corporation has made an impressive breakthrough in the export of transmission line towers and conductors. During 1969-70, its exports aggregated Rs 4.65 crores, five times more than its own performance in 1968-69. Currently, it is executing a big-turn-key project in Sudan valued at Rs 6 crores. It has also on hand a large package deal with Iran valued at Rs 18 crores. The highlights of the Corporation's export performance have been the pioneering work that it has done in the export of transmission line towers from India. A small beginning was made in 1962 when towers worth 1,500 tonnes were exported to New Zealand. This was followed up by a big effort as a result of which,

Indian transmission towers found their way to Canada, Iran, Kuwait, New Zealand, Nigeria, the Philippines, Seychelles, the Sudan, Taiwan, Tanzania, Thailand, the United States and the West Indies. Thus, a breakthrough was made in the developing countries; so also to the most sophisticated markets. The company has now been registered as an export house. Although for the present, it is handling only the products of its sister concerns, it has drawn an elaborate plan to offer its services and experience to various outside units, particularly small-scale industries.

Telco, on its part, has established a unique record in the field of export promotion. Its exports consist mainly of vehicles, excavators and spare parts thereof. Between 1967-68 and 1969-70 exports went up from Rs 1.28 crores to Rs 7.22 crores. The achievement assumes special significance in the light of the fact that only in April 1969 Telco started marketing its vehicles under the trade name of "TATA" instead of "Mercedes-Benz". There were apprehensions that, as a result, Telco will not be able to sustain the exports of previous years. Initially, a number of diffi-

culties had to be faced: aggressive Japanese selling in Africa, West Asia and Far East; attractive long-term and deferred payment facilities by competitors; flexibility and wide range of commercial vehicles offered by others; higher freight rates. To get over all these, Telco had to make a thorough study of new markets. Efforts were directed mainly to the UAR, Ceylon, Yugoslavia, Nigeria, Indonesia and the Sudan. Sustained endeavours without cost consideration made it possible for Telco to cultivate these markets and to put the Indian-made commercial vehicles firmly on the export map. Telco's vehicles now operate in 22 countries all over the world, which casts on the company the responsibility of organising after-sales service and provision of spare parts. This and much more, the Telco has been able to achieve, because of its single-minded dedication to exports. □

Transport bottleneck for ores ?

THE Federation of Indian Mineral Industries is worried that exports of minerals might run into difficulties because of transport bottleneck. According to the Federation, from the very beginning of the current financial year, considerable difficulties are being experienced in the movement of various minerals, particularly that of the iron ore and manganese ore from the eastern and central regions of the country. During the period April 1970 to January 1971 out of 2.38 million tonnes of iron ore required to be moved from the eastern region to Paradeep for export, only 1.02 million tonnes could be moved by the Railways. Similarly, for K. P. Docks, out of 5.32 lakh tonnes required to be moved for exports, only 2.66 lakh tonnes could be transported. The performance of the Railways during the months of February and March 1971 has also been rather discouraging, according to the Federation.

In the case of manganese ore also the same difficulties continue to be faced in Bihar, Orissa, Madhya Pradesh and Maharashtra. This has not only affected the exports of manganese ore but also the supply of this vital raw material to steel and ferro-manganese plants which have to meet internal requirements as also export commitments. As a result of this situation, considerable quantity of iron ore and manganese ore has accumulated at the mines and rail heads in different parts of the country.

Apparently, the difficulties of the Railways are that a large number of wagons has been immobilised in West Bengal and Bihar. The Railways have also been facing some labour trouble. But these difficulties have persisted for sometime and the first to draw attention to them was the coal industry. The Railways had then promised to streamline the movement of goods. But it is not known what success has been achieved in this direction. In any case, the Federation is right in sounding the warning that unless the transport of minerals improves exports of iron ore and manganese ore will suffer. □

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities, the items required and the closing dates of these tenders are as follows:

Argentina

SEGBA, Buenos Aires; Three phase meters, transformers etc; April 28, 1971.

Burma

Union of Burma Railway Board, Rangoon; Air-conditioners; April 19, 1971; cupola furnace; April 21, 1971 and lathes; April 30, 1971.

Construction Corporation, Rangoon; Building material; April 19, 1971; dump trucks; May 12, 1971.

People's Toilet Industry, Rangoon; Printing and bond paper, chemicals, polystyrene, PVC conduit pipes etc; April 25, 1971.

Textile Planning Committee, Rangoon; Chemicals and dyes; April 26, 1971; kraft paper and straw boards; April 27, 1971.

Electricity Supply Board, Rangoon; Diesel generating sets; May 28, 1971.

Hongkong

The Controller of Stores, Hongkong; Hydrated lime; April 30, 1971.

Iraq

Dates Marketing Organisation, Baghdad; Marking ink, date trays, etc; April 25, 1971.

Malaysia

Freeze Cardew and Ridge, Kuala Lumpur; Transformers and switchgear; Last date not specified.

Malawi

Government Medical Stores, Blantyre; X-ray equipment and chemicals; April 29, 1971.

New Zealand

Auckland Hospital Board, Auckland;

Textiles; May 14, 1971.

Republic of Korea

The Medium Industry Bank, Seoul; Machine tools; April 30, 1971.

Tanzania

Central Tender Board, Dar-es-Salaam; Veterinary medicines and drugs; April 29, 1971.

East African Harbours Corporation, Dar-es-Salaam; Installation of a single Buoy Mooring and pipe line; May 2, 1971.

Turkey

FICCI ANNUAL SESSION

Government no adversary of business

Mrs INDIRA GANDHI

THIS is an occasion which gives me an opportunity of renewing my contacts with the members of the Federation and to exchange thoughts about various matters concerning our economy. There is always scope for an honest difference of opinion regarding the wisdom or otherwise of particular policies. But mutual recriminations do not take us far. As good democrats, we all have to function within a common framework which has the support of the people.

The process of history is relentless. No matter what we do, we cannot flout it, else we shall be bypassed and left behind. That is the danger in clinging to earlier conclusions reached on the basis of premises, which are no longer relevant. The more we harp on old problems, the further we move away from our real context.

No one of us, whether in Government or outside, is infallible in his judgment. We learn as much from one another as we do from our own experience. This is part of living. The Government is always willing to listen to the views of leaders of industry and business on economic, industrial and trade policies. After all, despite your often expressed fears about the encroachments made by the Government, as much as 85 per cent of our economy remains the domain of the private sector.

Many of the crucial decisions which shape our economy are taken in the private sector. If these decisions go awry, it is the economy which has to bear the consequences. That is why we are so anxious for proper understanding between the Government and the private sector. Mr President, you have referred to some imbalances in our economy. Certain imbalances are inherent in the nature of development. How is it possible to move simultaneously all along the front? Economic growth cannot take place at the same rate everywhere in the country. Nor can it be the same in all activities. Some imbalances emerge because in retrospect our judgment turns out to have been faulty. We are not omniscient and there is always the possibility of an inaccurate assessment of particular needs of the economy. The forecasts of even the best statisticians and experts often suffer from large margins of error. Demand forecasts may have been over or under-estimated. Expected supplies may not materialise on time. These are the hazards of economic programming.

The really irritating and unnecessary imbalances are the ones which are deliberately created. Imbalances between

supply and demand in the case of essential goods are sometimes created by artificially starving the market, or by a deliberate diversion of resources from required areas or uses by powerful groups and individuals for use elsewhere. Not all businessmen indulge in such activities but even a few instances are sufficient to create an adverse impression on the public mind and in such a situation drastic remedies become necessary to restore some balance.

In Parliament and public forums, the importance of price stability is often stressed. As businessmen, you have understandably emphasised the need to increase production and to link wages with productivity as one of the most effective means of maintaining costs and prices at reasonable levels. As a general proposition, this approach is unassailable. But when we seek to identify specific measures for holding the price line, we meet with resistance. This is because no one wants to get hurt in the process of price stabilisation.

Farmers want higher prices for their produce even when unit costs have gone down as a result of higher yields. They would like the parities between farm produce and manufactured goods to shift to their advantage. Understandably, workers want the rise in the cost of living to be neutralised, so as to prevent any erosion of their standards of living and in their turn, industrialists expect to be compensated for every item of increase in cost.

The imperative need to increase exports requires our prices to remain competitive in world markets. The procedure and practices of the Tariff Commission seem to have sanctified the concept of price fixation on a cost plus basis. This vicious circle has to be broken. A critical scrutiny of costs and prices is essential if we are to hold the price line. This can happen only if there is all round efficiency and if different sections of society moderate at least their sectional bargaining power. Productivity is important. In fact, it is essential if we are to develop as a major industrial power. The Government has promised to hold discussions with leaders of trade unions and managements to see how best productivity can be increased.

Mr President, you have advocated the decentralisation of powers regarding industrial licensing. It seems to me that no such gathering can take place without some reference to the licensing policy. As you all know, a very large segment of industry is already outside any scheme of licensing. The whole field of small industry as also large units involving investment up to a crore of rupees are not subject to licensing. Thus there is a very wide area in which the States can play an active promotional role in industrial development. We shall assist them to play this role vigorously. The free area of industry

is significant from the point of view of the generation of employment and the improvement of the standards of living of the people, as Punjab has so dramatically demonstrated.

But if it is your suggestion that the States should licence large units and allocate foreign exchange, then I am afraid you are ignoring certain basic factors. We have a national market. The development of industry and the allocation of foreign exchange must necessarily be fitted into an overall scheme of national priorities. How can this be achieved with the decentralisation of licensing and allocation of a scarce resource such as foreign exchange.

The need to create greater employment opportunities is self evident. The task has to be shared between industry and the Government. Since the bulk of our economic activities is in the private sector, a major responsibility for creating additional employment also devolves on the private sector. We all expect some initiatives from you in this matter. The Government on its part will do everything possible to create employment, consistent with the need to maintain a high rate of growth. You probably are aware of the various Government schemes which have been recently initiated. When completed, most of these schemes will strengthen the infrastructure of the economy and therefore create opportunities for investment in secondary manufacture and trade. That these programmes are labour-using in addition, doubles their value.

However, we must not forget that important as these programmes are, they are essentially supplementary ones. We can reshape the technological pattern of our investments here and there, but whether or not we make a real dent into the problem will depend upon the scale of investments in the Government and the private sectors taken together. Moreover, we shall be in desperate need of additional resources if we are to activate the kind of schemes which your President has mentioned and if we wish to deepen and widen the infrastructure.

Mr President, you have also asked the Government to expand its investments in the economic infrastructure, and have observed that by virtue of its nature and capability, the corporate sector is in a position to provide the funds, which are crucially needed for balanced development. Presumably this means an effort on your part to generate more resources from within and to lessen the burden on financial institutions. This is indeed a challenge to take up. This is where genuine entrepreneurial vigour and skill are required. A good entrepreneur is dynamic and responds positively to challenges and he spurns aids and assistance. He is driven forward irresistibly by what Max Weber called a sense of 'calling'.

Text of the inaugural address delivered by the Prime Minister, Mrs Indira Gandhi, on April 10 in New Delhi at the forty-fourth annual session of the Federation of Indian Chambers of Commerce and Industry.

I should like our entrepreneurs to move boldly into international markets. Businessmen are constantly reminding me of the importance of efficiency. This principle is often invoked against protective measures for small and new entrepreneurs at home. But then they ask for similar protection against foreign competition. It is therefore a welcome sign that members of the Federation are now offering their co-operation for the development of small-scale units and have volunteered to advise their counterparts in the small-scale sector on matters of production, marketing and finance. For an infant industry protection is a legitimate demand, but infants must grow up one day. How else can we complete the industrial revolution which bypassed us while we were under colonial rule?

In the course of the past two decades there have been several false starts and weak endings in our planning endeavours. But no nation—perhaps no individual has progressed without mistakes. A reappraisal of the planning process will soon be undertaken. In his speech on the interim budget the Finance Minister made it clear that we intend to augment the scale of public investments. This will supplement and strengthen what you do on your own. If your accent is on growth, you will find that there will be sympathy and support from the Government. However, if there is hesitation on your part, the Government may have to encroach on what you would normally consider your territory.

Without constant reform and renewal we shall be swept away by succeeding events. This is why I cannot wholly agree with your President's conclusion that it is only by strengthening the apparatus of production that we shall be able to travel faster on the road to social justice. This is only partially true. Increase in production and better distribution must go together. Any other path will ultimately lead to the decline of production itself and our carefully laid out schemes and projects may well be engulfed by the despair of the masses.

In planning our economic growth, we cannot brush aside the people's expectations and impatience. You have spoken of another kind of impatience—impatience with official procedures. I agree that some of these procedures need to be streamlined. Government is looking into this aspect. At the same time, industrialists should realise that our controls are not for stifling industrial growth, but for ensuring that such growth gives the most social benefit.

Unfortunately, self-restraint as an instrument of economic policy has not proved altogether efficacious. Gunnar Myrdal while surveying what he calls the Asian Drama laments the reluctance of our Government to place social obligations on the people. He calls us a "soft State". He says, and I quote: "...development cannot be achieved without much more social discipline than the prevailing interpretation of democracy... permits". We would do well to remember that this is the observation of one who is not an authoritarian.

I hope you will not mind what I have said and will take it in good spirit, that you will regard the Government not as your adversary but as your friend. We

want industrialists and businessmen to prosper. This prosperity should not be at the expense of the general economic welfare but rather a by-product of it. Your prosperity has to be reconciled with the well-being of the people. For prosperity itself cannot exist without the satisfaction of the basic needs of the people. This is the fundamental truth which we must all face and I hope it will infuse your deliberations.

I have spoken of economic problems because that is your special concern. But in today's world life cannot be divided into compartments. We must all take an interest in and work for the good of the whole. In our country, as perhaps in others also, different groups or interests seem to function as rivals to one another. Faced as we are by monumental problems, this is a luxury we can ill afford. The human race is caught in what Alvin Toffler describes as a "current of change, a current so powerful today that it overturns institutions, shifts our values and shrivels our roots. Change is the process by which the future invades our lives, and it is important to look at it closely, not merely from

the grand perspectives of history, but also from the vantage point of the living, breathing individuals who experience it." The change is not merely of better goods or faster speed, nor even of ecological imbalances—it "has personal and psychological, as well as sociological, consequences". Each section of society, each activity is so closely linked.

In these circumstances, is it too radical or too idealistic to hope that each group should by its own work help to promote the work of others, that the output of one group might become the input for many others? We can change our cities and villages if we are sensitive to all that is around us. If we are constantly on the look out to see what we ourselves, as groups and individuals, can do—small acts of kindness, concern with the cleanliness, health and beauty of our environments, of people no less than places. If an individual cannot do things in a big way, let him at least look to the small details which are within his reach. If our purpose is common, let our endeavour be united. Let us all co-operate so that our goal can be achieved in partnership and in harmony.

Linking production with social justice

D. C. KOTHARI

MADAM Prime Minister, may I extend to you our heartiest congratulations on the tremendous success that you and your party have achieved in the elections? It is a great tribute to your sagacity and insight that you should be able to so accurately judge the pulse of the nation and take the stand which you have done in respect of the various issues and the remedies the country wants in the present context of things. We, from business, will be happy to offer such experience and expertise that we have in the service of the nation.

What has happened during the past few days in the eastern part of our sub-continent should make us all the more reverential in our attitude towards democracy. The appalling tragedy in this part of the world brings home the point, more than ever before, that the will of the majority cannot be suppressed for long. It emphasises that the democratic process alone promotes welfare and peace through better understanding of human relations.

Now that the din and bustle of our mid-term elections are over, revealing as a sensitive seismograph the shifts in public opinion, we may perhaps settle down to make an appraisal of the economic and social problems that have arisen during the last few years. In my observations today, therefore, I shall try to identify these problems, why and how they arose and what we all, acting in unison, can do to put them right. In doing so, I am fully

conscious of the needs and aspirations of the people to share in the gains of prosperity and the anxiety of the Government to promote social justice. For, after all, it is an indisputable premise that what the different economic groups have in common is very much more important than what apparently separates them. Let me reiterate that the Government, management and labour have economic and social functions that are essentially complementary and that they owe responsibilities towards one another and to the community. They can be discharged effectively only if the three parties act together in a partnership of service in the interests of the community as a whole.

A review of our economy for the last twenty years would reveal many plus points. Food production has gone up by 100 per cent, industrial output by 200 per cent. Compared to our starting point, we are in a much stronger position, be it in agriculture, in industry, or in the infrastructure. The per capita income has improved at 1.3 per cent per year—it would have been more but for the increase in population at over 2.5 per cent. But, our level of investment never matched our requirements. In fact, since 1965 it has remained stagnant at around 12 per cent of the national income while we need to invest a minimum of 15 per cent to achieve a breakthrough. Only then will we get the momentum to sustain a high level of activity for a continuous minimum income growth of 8 per cent, with an additional job opportunity for five million per year.

Also visible are a few imbalances which have arisen as a result of the very policies that enabled us to reach our present level of growth. In fairness, how-

Text of the presidential address delivered by Mr D. C. Kothari in New Delhi on April 10 at the forty-fourth annual session of the Federation of Indian Chambers of Commerce and Industry.

ever, it must be said that such imbalances are inherent in the nature of things because when we plan for something, we cannot always anticipate the many contingencies that may arise in the actual working operations. These imbalances are reflected in the contrast between irrigated and unirrigated areas, between cash and food crops, between capital goods and consumer goods producing industries, between principal industrial units and ancillaries, between production and demand for industrial raw materials, intermediates and components, and between supply and demand of funds for the running and expansion of industries.

In addition to rectifying these imbalances we have also to solve the concomitant problems, such as, (a) the steady increase in unemployment, (b) stagnation in production, (c) the tendency for prices to rise, noticeable generally during the last two years or so, (d) and, as against this, the demand for higher wages following higher cost of living, (e) exports not keeping pace with the targets, and (f) deterioration in the law and order situation, particularly in certain parts of the country.

We have to embark upon a new strategy by which the expectations of the people will be increasingly fulfilled. This means strengthening the national economy all across the line; it means creation of new jobs; greater infrastructure facilities; reducing imbalances, both inter-regional and inter-class; stabilising prices and preventing social dislocation; more equitable distribution of income; promoting exports and import substitution; and, it means, of course producing more goods for higher consumption and greater investment. There can be no conundrum of "either/or" generalisation in the development process. In essence, this conundrum is no more than marginal adjustments against a background of almost universal expansion.

Unemployment is the biggest problem that is facing us. It is not something new. With the spread of education, the number of the educated unemployed has tended to increase. We are one with the Government in its programme of large-scale public works which will absorb both unskilled and skilled personnel. This will strengthen our infrastructure—both economic and social—and make certain that the human resources will not run into a tragic waste. This will also open up the vast hinterland of our country. The money so spent will prove to be a good investment at our present stage of growth. We need a better arterial and radial system of communications, power distribution networks, canals and channels, and more houses and hospitals. These are indeed some of our cherished objectives set to be attained, and our ingenuity lies in making the impact on the economy least inflationary.

I will lay an equal emphasis on extending the green revolution to our cash crops. Although we have had remarkable success in the evolution of new varieties of wheat, and, to some extent, in maize, we have not yet made much headway in rice; certainly not, in crops like cotton, jute, oilseeds, etc. India has a stupendous wealth in her agricultural cash crops which form the basis of our agro-industries. If this wealth could be fully exploited and utilised, our agro-industries would progress further and our foreign exchange earnings augmented considerably. Let

me cite the instance of cotton. Although it has been one of India's major crops, in recent years the supply position is very acute. But it is possible to increase the yield of cotton, and this has been demonstrated successfully by the Indian Cotton Mills Federation. The experiments have shown an increase of as much as 100 per cent in the yields.

Urban areas too, particularly metropolitan cities like Calcutta, require special consideration. It is not commonly recognised that the urban population is growing twice as fast as the rest. The cities are getting overcrowded and the state of the civic amenities is appalling. This is a live source of unrest and indiscipline. Violence is becoming a way of life. Let us remember that the existence of penal laws from times immemorial shows that man is not always a virtuous creature and that transgressions are to be expected. But the phenomenon, which we observe today, is frightful. It is a matter of concern to the rest of India that a State like West Bengal where 30 per cent of our industry is concentrated should be overtaken by violence and indiscipline. There is, therefore, a very urgent case for taking steps to reduce tensions through a massive programme of development.

With every day the citizenry of our country is growing by leaps and bounds, and so, undoubtedly, will our problems. No doubt, there are more hands to help but with all our effort I do not think we will be able to give them even the basic requirements of a decent life. Not many words can be wasted on so important a matter like this. The Federation and its constituents will lend their full co-operation to the Government's programmes for the control of population before it is too late for control.

This brings me to the question of distributive or social justice. A great deal has been said on the subject recently, and the concept, I think, can be given the requisite body only through greater production. If production is stagnant, the welfare of the people cannot be promoted. This has become so obvious with the stalemate in industrial production during the last few years. What we have to ensure is that production is increased all round, and also that the large masses of our country benefit. There should, therefore, be no controversy about the proposition that growth of production should be inter-linked with the spread of social justice. One cannot obtain without the other in any civilised society. However, I firmly believe that only as we strengthen our productive apparatus, we will be able to march quicker and easier along the road to social justice. In this task, I should like to assure you, Madam Prime Minister, of the utmost co-operation of the business community.

For various reasons, India has been labouring under a period of shortages. It will be some time before we reach a period of plenty. Therefore, we will have to exercise the utmost restraint in our pricing policy so that a fair deal is given to the consumer. It is not an easy task, but I think, this has to be done consciously and with the idea that industry and business owe a duty not merely to themselves, but to the community at large.

Monetary and fiscal policies apart, higher prices are due to production not

keeping pace with demand. And demand has grown enormously owing to increase in population, reinforced by a larger purchasing power, particularly in the rural areas, thanks to the green revolution, and as a result of circumstances like increase in wages unrelated to productivity. In this connection, I would appeal for a formula to be worked out in consultation with the trade unions for relating at least some portion of the increase in wages directly to productivity. Although in various ways, from time to time, attempts have been made to do this, they have been without success, and most of the resolutions or discussions have remained only a matter of form. Our Government must get down to this problem and see that our price structure remains at least somewhat in line with international levels. For this reason too, the need for increasing production is imminent. We have not been able to keep pace with the demand, both internal and external, partly because of raw material shortages, and partly because of controls in detail to which I shall now turn.

The major part of controls on industry came into being three decades ago during the war years. Quite a few have been added since. I concede that these controls may have served some useful purposes. They have, nevertheless, become too cumbersome and complex.

I am conscious that our Government is alive to the situation—in fact, appointed a number of committees to go into this matter; there are several reports with various suggestions as to how best a rationalisation can be achieved. It may not be possible to make any fundamental or radical changes; but, surely, within the framework of the law and rules as evolved, there is scope for simplification and for quickening the process of licensing. For instance, at present it is not necessary to get an industrial licence if the raw material imported does not exceed three per cent of the ex-factory annual value of production. This percentage can be substantially increased. My submission is that we need not worry about the exchange spent on the import of raw materials since it will be cheaper than the import of finished products.

It is worthwhile considering whether the various States can be allocated a certain amount of foreign exchange, as also certain powers of licensing, so that decentralisation might help in speedier disposal of applications and quicker establishment and expansion of industries. While saying this, I want to make it clear that such decentralisation should not result in creating new imbalances, or weakening in any way, the overall policy of harmonious industrial growth.

One of the greatest impediments which anyone in charge of an industry faces is procedural delays. You can ask any industrial manager in the public or private sector, as to why he cannot improve upon his present performance. The answer, I predict, will be very much the same: It is that he is just unable to do any creative activity without stumbling across some rigid rule or the other. I am not suggesting for a moment that more freedom should be given to these managers to make them individually happy. The point is that they require sufficient elbow room to discharge their responsibilities, to see their plants function efficiently, and to fulfil the

expectations of the planners as well as the people. I may mention that even in communist countries there is considerable revision in thinking about elaborate control on industrial management.

While on this subject, may I indulge in a little loud thinking? I am having in mind the possibility, in the foreseeable future, of the public sector becoming a large contributor to the exchequer. I am sure, when this happens the very complexion of the budgets will undergo a radical change. In order to usher in this era, it would be desirable to revise the approach to control on public sector enterprises. In particular, the co-operation of our sovereign Parliament and Government is not only essential but imperative. While both must keep themselves abreast with the policy matters, the day-to-day affairs, I submit, should be left to be managed by the board of directors.

In my view, as I said a moment ago, it should be possible to look forward to surpluses from public sector enterprises, given the requisite autonomy in their operations. Similarly, the surpluses from the savings of corporations in the private sector can be augmented and utilised for re-investment in the businesses that generate them. My point is that while the corporate segment, both public and private, may be small in relation to the vast agricultural sector, it is the corporate sector, by virtue of its nature and capability, that can provide the funds so critical to strengthen the framework for sustained development which alone can spread social justice.

In the conditions and circumstances obtaining in India, we will have to make a deliberate effort to stimulate the growth of small-scale industries so that the base of industry is broadened. Government and large-scale units should assist the formation of small-scale industries for manufacture of ancillaries and components. In fact, in the developed countries this is a well-recognised practice. The large-scale units in India also can render valuable service by deploying their personnel to give production, marketing and financial advice to the small-scale units. The Government, in its turn, can further strengthen the existing institutions assisting the small-scale sector.

Our exports reflect the stage of our economy rather than want of any conscious effort either on the part of the Government or the exporters to achieve greater targets. Once our productive apparatus is strengthened and our costs are contained, there will be a greater flow of goods available for sales abroad. It is, therefore, time that we gear up our export policy and procedure to take the fullest advantage of the opportunities which will come in the wake of the implementation of the Unctad general scheme of non-reciprocal, non-discriminatory preferences. These are intended to increase the export earnings of a developing country like India, to promote industrialisation and to accelerate the rate of economic growth. Indeed, India is in a position to avail of these opportunities, for we have already reached some maturity in industrial development. The point is fully appreciated by our friends abroad. For instance, when the Ficci delegation went to Japan we were asked by our Japanese friends to think in terms of supplying industrial goods to Japan, and they were also prepared to collaborate with us in

international tendering and in the setting up of industrial ventures in third countries.

Again, I would like to mention that for increasing our exports, it is necessary to strengthen the institutional framework. Export credit has become an accepted feature of international trade in recent years. This has put India, with low credit capacity, at a disadvantage. If we give credit, foreign exchange will not be available for a time, and meanwhile critical imports will suffer. Therefore, some institutional arrangements have to be made, say, by the setting up of an export-import bank which will be a dynamic agent, with drive and initiative, to put both export and import trade on a sounder basis. This bank should have tie-up arrangements with the World Bank and for instituting a scheme for refinancing the export credit by the World Bank itself or by the central banks of the developed countries. Possibly, the developed countries may be persuaded to set aside for this purpose a part of the

special drawing rights evolved by the International Monetary Fund.

Business in India must appreciate that technology relating to organisation and management is not static but in the process of continuous change. A number of corollaries follow: There must be greater professionalisation of management, greater readiness to accept newer methods and to adopt policies in conformity with the spirit of the times and requirements of the nation. One can see that there will be a growing distinction between ownership and management here, as there is in the developed countries. It will be necessary for Indian industry to go in more and more for professional management if we are to keep pace with international developments. No doubt, a good beginning has been made, and it should be a matter of gratification that we are steadily increasing the crop of the professional cadres.

Before closing, I would like to refer to one aspect of the relationship between the

(Continued on page 725)

A dream today, a reality tomorrow

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

REVIEWS

Growth of telecommunications

Economics of Telecommunication in India (With reference to telephones): Dr R. S. Srivastava; Tech India Publications, Rohtak Road, New Delhi-5, Pages 428; Price Rs 20.

This is an extremely useful book on an unorthodox and unfamiliar subject bringing to light rates, patterns and implications of growth of telecommunications in India as against an overall growth of the economy. The book is an outcome of research done by the author for his Ph D. Dr Srivastava being an economist-cum-engineer has been able to deal with the subject in a masterly fashion and has been able to derive certain conclusions which point to the need for still more researches

in the field. One of the limiting factors of the developmental strategy that has been formulated for our country has been that various projects of great importance like the one studied in this book have not been examined closely at their micro-level and woven neatly in the network of planning-model. This has resulted in a number of imbalances that came up now and then in the demand and supply of the output of these projects and in its train it threatens to stifle the developmental process. Dr Srivastava deserves to be congratulated for this daring effort. After reading this book one feels tempted to see similar pieces of research produced on national and regional projects of this sort.

The book contains seventeen chapters. Chapter 5 to 10 might be considered as the core chapters of the book. Modern economic and statistical tools have been convincingly used by the author. Keeping in view the limitations of the tools, the use of indifference curve to demonstrate income and substitution effect, isosystem contours and various cost methods have been indicated for finding out the optimum cost. The author has skilfully attempted to explain how the entire telecommunication system is an indivisible unit capable of yielding economies with optimum scale operations.

Cost-benefit analysis as worked out by the author brings out some very interesting results to be reckoned with. For instance, table 65 on page 322 reveals decreasing cost and increasing revenue per unit of telecommunication service over the period 1958-59 to 1965-66 indicating that telephone services are working on increasing return scales. Table 66 indicates that net profit due to telephones amounted to Rs 17 lakhs in 1938-39, which rose to Rs 9.55 crores in 1966-67.

In fact, in the modern age, telecommunication has become a vehicle of economic growth and social advancement. The author has argued effectively that as the country has poised itself for great economic strides this sector of the economy has enormous possibilities of expansion, keeping in view the social as well as the economic costs and gains. It would serve as one of the key variables of growth. Since India forms an important and inseparable link in the international telecommunication network, she cannot plan her network in isolation. It has to be planned in consonance with the existing or the likely patterns elsewhere. At the same time, the system must be in tune with the availability of limited internal and foreign exchange resources; vast size of the country; agrarian character of the masses; multiplicity of geographical and climatic condition and the pattern of economic, social and cultural advancement envisaged. Dr Srivastava has not dealt with this aspect of the problem except that he has made some side references in this regard.

THE CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1970 EDITION

An encyclopaedic work of reference for businessmen and investors. The only Year Book published in this country, which contains comparative balance sheets for two periods.

The information given about each company relates to its date of registration, nature of business carried on, secretaries, directors and their share qualifications, details of capital and shares, capital history, share registration fees, names of auditors, period when accounts close, date of meetings, summary of balance sheets, and progress statements containing provisions for taxation, depreciation, allocation to reserves, net profit, amount carried forward, dividends, highest and lowest prices etc. for ten periods.

Last year the demand exceeded the number of copies printed. All late orders had to be refused. To avoid disappointment, send your order immediately to the Secretary, The Calcutta Stock Exchange Association Limited, 7, Lyons Range, Calcutta 1.

Price Rs. 25.00

Packing and Postage Rs. 10.00 extra.

The Mysore Sugar Company Limited

Bangalore

Chairman, Shri G. Made Gowda's Speech

SPEECH by Shri G. Made Gowda, B.A.B.L., M.L.A., Chairman, at the Thirty-seventh Annual General Meeting of the Shareholders of the Mysore Sugar Company Limited, Bangalore, held on Monday the 29th March 1971:

LADIES AND GENTLEMEN,

I have great pleasure in extending to you all a warm welcome to the 37th Annual General Meeting of the shareholders of the Mysore Sugar Company Ltd. The Report of the Directors and the Statements of Accounts for the year ended 30th June 1970 along with the 'nil' comments of the Comptroller and Auditor-General of India have already been circulated to you and I think we can take them as read. At the end of the Accounts you will find a review by the Accountant-General giving an interesting analysis of the financial position of the Company for the year 1969-70 with comparative figures for the preceding two years. This year too it has not been possible for your Directors to call this meeting within the prescribed time on account of unexpected difficulties that had to be encountered following the shifting of the Accounts Section from the Head Office at Bangalore to the Factory Office at Mandya.

2. As you would have seen from the report and accounts, your Company has fared well during 1969-70, with an all-round increase in production and a fair level of profit, which should be considered satisfactory having regard to the present plight of the sugar industry. Our performance will be better appreciated against the background of the all-India position of the industry, with which I shall preface my review of the working of your Company.

3. Under the policy of partial decontrol introduced in 1967-68 there was a further spurt in sugar production during the 1969-70 season, from 35.6 lakh to 42.8 lakh tonnes. This being much more than what the country can consume or export, the larger production has brought in its train certain difficult problems for the industry, which finds itself faced with a crisis of glut. The excess production has created acute storage difficulty for the mounting stocks, the financing of which has thrown a severe strain. The burden of the interest charges alone is adding to the cost of sugar by nearly Rs 3 per quintal. To relieve the industry from this burden, the Union Government had announced its intention to build a buffer stock, as recommended by the Sugar Enquiry Commission, but nothing has been done in this direction so far and the problem is growing in magnitude, especially as the current season's production is also expected to be more than 40 lakh tonnes.

4. In the matter of sales, the levy price fixed by the Government of India is

found uneconomical and the marketing of free-sale sugar has become a source of loss as factories, especially in South India, are obliged to sell their sugar at prices which are below the levy price. This anomalous position is the direct result of the levy of a higher rate of excise duty on free sugar, from 1st March 1970 depriving the factories of their price by as much as Rs 15 a quintal, without benefiting the consumer. There is no justification for this discriminatory levy, and unless it is equalised with the duty on levy sugar, the industry would have to pay a very heavy price indeed for the continuance of the present system of partial decontrol, which has practically out-lived its purpose.

5. For our Mandya factory, the year 1969-70 was an eventful one, with the crushing of cane reaching an all-time high level of 4,85,967 tonnes, which is double the quantity of 2,45,949 tonnes crushed in the previous year. Unfortunately, the cane was of a poor quality and this coupled with the prolongation of crushing till the end of April 1970 brought down the recovery to 9.09 per cent for the whole season. The quantity of sugar produced was 44,176 tonnes, which also constitutes a record for your factory. Under the Government of India's scheme of cane price fixation, the price payable by our factory was Rs 77.50 per tonne up to end of September 1969 and Rs 81-70 from October 1969. As against these different prices, your Company paid a uniform price of Rs 82 for the whole year. The splitting of our normal crushing period into two separate seasons with varying prices is an anomaly which is causing embarrassment and concern to your Company as it is found impracticable to effect a change in cane price in the middle of our season. The reckoning of the official season from July to June would be an easy solution to this handicap which we along with other South Indian factories experience, without in any way inconveniencing factories in other parts of the country. Out of the year's production, a total quantity of 3,00,769 quintals of sugar was sold for Rs 490.10 lakhs, out of which Rs 102.06 lakhs was absorbed by excise duty, cane purchase tax taking away another slice of Rs 26.68 lakhs.

6. In my speech last year, I had referred to the revised zonal pattern of sugar price fixation, based on the recommendations of the Tariff Commission, which had resulted in a steep reduction in price for the factories in Mysore from Rs 131 to Rs 119.35 per quintal. I am glad to say that as a result of the vigorous efforts made by your Company along with other factories in the State, the Government of India were pleased to raise our price to Rs 129.57. The price structure evolved by the Tariff Commission does not do full justice to the factories in the Mysore zone and it is to be hoped that in the revised

price, which is due to be fixed for the 1970-71 season, the deficiencies in the Tariff Commission formula will be rectified and due note taken of subsequent increase in costs, particularly under the heads of wages, fuel and packing.

7. Our Distillery unit continued to work satisfactorily and achieved a high level of production of 87,633 hecto litres of alcohol, during the year under review, as against 60,002 hecto litres in the previous year. There has been an increase in the demand for alcohol, both for potable and industrial purposes, and even the increased capacity is found inadequate to meet the growing demand. By far the greater portion of our alcohol now goes for potable purposes. The problem of molasses needed for working the enlarged plant is assuming importance as we have to depend upon other factories for meeting our requirement and the movement of this commodity is proving to be difficult and costly.

8. In the second year of its working, the Acetic Acid Plant doubled its production from 983 to 2,080 tonnes for which a quantity of 27,50,798 litres of alcohol was diverted from our distillery, with the permission of the Excise authorities. The Mysore Acetate & Chemicals Company of Mandya, which is the chief consumer of our acid, lifted 1,815 tonnes, while a small quantity was put on the market. The economics of this new project, on which your Company has invested a crore of rupees, are causing concern as the State Government is viewing the use of alcohol for acetic acid manufacture from an excise angle, instead of treating it as an industrial raw material. Consequently, excise duty is sought to be levied on the alcohol used for acid manufacture, the incidence of which will be such that neither the acetic acid, nor the end product manufactured by our sister concern, will be able to bear the burden. In the interests of development of alcohol-based industries in the State, it is essential that alcohol used for manufacture of acid should be completely exempt from all excise levies.

9. Turning now to the Accounts, it will be seen that the trading profits from sugar, alcohol and acid during the year under report, amounted to Rs 83.90 lakhs. After meeting interest charges to the extent of Rs 22.58 lakhs and after providing for depreciation on fixed assets, and setting off the loss on farms, the net profit stands at Rs 30.13 lakhs, as against Rs 65.19 lakhs in the preceding year. The decline in profit, in the face of increased production and sale of sugar, is to be attributed to the low sugar recovery and consequent higher cost and the unremunerative levy price fixed for sugar, which left little or no margin. Besides, the steady fall in the open market price, coupled with the 50 per cent increase in excise duty on this sugar, pulled down the realisation even below the levy price in the closing months of the year. The bulk of our profit has been earned from the distillery, the satisfactory working of which has yielded a record profit of Rs 21.95 lakhs, as compared to Rs 15.76 lakhs in 1968-69. Besides, a maiden profit of Rs 9.75 lakhs has been contributed by the Acetic Acid unit. The farm operations have resulted in a loss of Rs 3.40 lakhs. But in the last three years over a crore of rupees has been realised

from the sale of the farm lands. Doubtless, this income has eased our financial position and helped to reduce the interest charges to some extent.

10. Unlike the previous year when we had to set aside a large chunk of the profit amounting to Rs 38.76 lakhs to Development Rebate Reserve, the provision needed in 1969-70 is only Rs 1.58 lakhs. This is more than offset by a withdrawal of Rs 1.73 lakhs from this fund. This year too there is no income-tax liability and the entire profit of Rs 30.38 lakhs, inclusive of the balance of profit brought forward from last year's account, is available for disposal. This amount, it may be noted, is more than the profit of Rs 26.79 lakhs that was available last year, when the Company earned a much higher gross profit. As you are aware, practically the whole of the general reserve of about a crore of rupees built in the earlier years had to be utilised to meet the recurring loss of the bleak period of 1965 to 1968, when the working of the factory was crippled and the shareholders had to go without a return on their investment. Your Directors feel that it is only proper that they should rebuild the reserve so as to strengthen the financial structure of the Company and at the same time give the shareholders an adequate return in keeping with the traditions established by your Company. Accordingly, they recommend the transfer of a sum of Rs 19 lakhs to the General Reserve, raising this fund to Rs 36 lakhs, and the payment of a dividend on the equity capital at 20 per cent, subject to deduction of tax, which would absorb Rs 10.82 lakhs. The balance of Rs 58,000 is to be carried forward.

11. Gentlemen, the present position of the sugar industry in our country is one of deep concern, but I am optimistic that conditions will change for the better and that the industry will have to expand further to meet the demand for sugar that is steadily rising and is bound to rise in the years to come. What is wanted is a realistic and comprehensive sugar policy which will work smoothly giving the required incentive to the industry to achieve higher production and at the same time ensure fair price to the cane growers and easy availability of the commodity to the consumers at reasonable price. Our own State of Mysore is ideally suited for the development of this industry, thanks to irrigation facilities and the favourable climate and soil conditions, and it is no wonder that industrialists from other parts of India are turning to Mysore for putting up new factories. The co-operative sector is also expanding in a big way and Mandya District bids fair to be a leading producer. Ours is one of the oldest sugar factories in the country, having been set up in 1933, and is in need of renovation to suit modern conditions. In my speech last year I had dwelt at length on this issue and apprised you of the decision of your Directors to execute an integrated scheme of rehabilitation-cum-expansion at an estimated cost of Rs 320 lakhs so as to ensure efficient and economic operation of the plant for some more years. The first phase of this scheme is expected to be completed by October of this year, with the erection of a set of new mills and boilers. The second phase comprising the addition of a new turbo-set and two more boilers and costing Rs 140 lakhs is expected to be taken up in two stages, spread over the next two

years. Your Directors are convinced that, taking a long-range view this rehabilitation programme, which will give a new lease of life to the factory and ensure comfortable crushing of 2,500 to 3,000 tonnes of cane per day and its economic processing is an absolute necessity. But it is found difficult to raise the requisite finance from the banks whose lending policy has recently undergone a change which is not conducive to industrial development. Our programme, as scheduled, cannot be given up on this account and alternative ways of raising funds are being explored. Your Directors are confident that an approach to the investment market at this juncture will meet with ready response.

12. As a first measure of raising additional funds, your Directors have decided to accept Fixed Deposits from the public to the extent of about Rs 50 lakhs. I am also glad to inform you that your Directors have just taken a decision to issue bonus shares in the proportion of one bonus share for every existing three shares and this will soon be followed by issue of right shares at the rate of one right share for every two shares held after the allotment of bonus shares at a premium of Rs 2 per share, subject to the approval of the Controller of Capital Issues. It is also proposed to increase the authorised capital from Rs One crore to Rs Two crores. An Extra-ordinary General Meeting is proposed to be called for during the early part of May 1971 to seek your approval to these proposals.

13. The immediate outlook for your Company promises to be bright. On the basis of the performance in the first nine months of the year, I may say that the current year's working results will not in any way be less favourable than those of 1969-70. The factory has completed crushing of cane and although the tonnage is less there has been a marked improvement in recovery. I am also hopeful that Government would, before long, announce an increase in the levy price of sugar and rationalise the excise duty. On our excess

production in 1969-70 season we have earned an excise duty rebate of Rs 10.46 lakhs, which has been brought into the current year's account. Besides, the Distillery and the Acetic Acid units are expected to contribute their share of profits.

14. It is now my pleasant duty to thank all those who have contributed to the successful working of the Company during the year under review. I must, first of all, acknowledge the valuable advice and guidance given by my colleagues on the Board and compliment our Managing Director Shri S. Nanjundiah, for his able management of the affairs of the Company. The year was an eventful one for the factory when it had to handle a record quantity of about five lakh tonnes of sugarcane and I would like to express my appreciation of the willing and devoted work of the employees of all categories, from the General Manager down to the humblest worker. Our relations with labour continued to be cordial. In lieu of the recommendations of the Wage Board, substantial benefits have been extended to our employees. As against the minimum bonus of 4 per cent payable under the Bonus Act, your Directors have granted to the workers a higher bonus of 10 per cent of their earnings, in addition to an ex-gratia payment of one month's wages disbursed at the commencement of the year. The Government of Mysore, as usual, continued to extend their support to the Company and we are highly grateful to them. We are also thankful to the several Departments of Government for their co-operation and assistance. Lastly, I desire to acknowledge the co-operation that we have received from the large number of our cane suppliers.

15. Ladies and Gentlemen, I have now great pleasure in moving that the Directors' Report and the audited Statements of Accounts for the year ended 30th June 1970 be adopted.

(Note: This does not purport to be a record of the proceedings of the annual general meeting.)

R. B. REES
Manager, Bombay, and
Chief Executive Officer, India.

Auditors' Report on the Indian Branch of the British Bank of The Middle East under Section 30 of the Banking Regulation Act, 1949.

We have audited the Balance Sheet of the Indian Branch, of the British Bank of the Middle East at 31st December, 1970, signed by us under reference to this report, and the relative Profit and Loss Account with the books of account of the Branch maintained in Bombay.

In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949, read with the provisions of Section 211 (1), (2) and (3) and 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act, 1956, but are in conformity with Forms 'A' and 'B' of the Third Schedule of the Banking Regulation Act, 1949.

We report as under:—

Subject to and read with the foregoing:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.

(b) In our opinion proper books of account as required by law have been kept by the Indian Branch so far as appears from our examination of those books.

(c) The abovementioned Balance Sheet and Profit and Loss Account are in agreement with the books of account.

(d) In our opinion and to the best of our information and according to the explanations given to us such Balance Sheet and Profit and Loss Account, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner required for Banking Companies, and on such basis give respectively a true and fair view of the state of affairs of the Indian Branch as at 31st December, 1970 and their Profit for the year ended on that date.

BOMBAY, the 29th March, 1971.

BALANCE SHEETS

DIVIDEND RAISED

Associated Bearing's results impressive

ASSOCIATED Bearing Co Ltd (Chairman: Mr A. Hydari, Bombay) has reported excellent performance for the year ended December 31, 1970. The company's sales have spurted to Rs 7.9 crores from Rs 5 crores in the previous year recording a rise of 56 per cent. The gross profit almost doubled to Rs 3.2 crores from Rs 1.7 crores in 1969. The net profit, after depreciation and taxation, increased to Rs 1.96 crores from Rs 1.11 crores. The dividend was stepped up to 121 per cent from 10 per cent.

The company's gross profit margin works out to 41.2 per cent against 33.6 per

cent. The ratio of net profit to net worth comes to 29.1 per cent (21.1 per cent).

During the year under review, ten new basic types of bearings were introduced raising the total number of basic types of bearings manufactured at the year-end to 73. An increase in production of around 60 per cent in 1970 over the previous year necessitated the carrying of higher inventories, which at Rs 4.53 crores were 29 per cent higher compared to 1969. However, increased sales enabled the company to reduce its total borrowings by Rs 89.72 lakhs,

resulting in a saving in interest charges of Rs 4.09 lakhs.

All the sterling balances representing the contribution of the foreign collaborators to the company's share capital, (kept abroad specifically to import capital goods) were fully utilised in the year under review. A further sum of Rs 35 lakhs was paid to the ICICI in the year under review reducing the loan amount to Rs 45 lakhs at the end of the year. This loan will be completely liquidated by April 1972.

The company's existing licensed capacity of three million ball bearings has almost been reached. An application to manufacture four million more ball bearings per

annum has now been approved by the licensing committee subject to certain conditions. Similarly, the company's application for further expansion of its capacity to manufacture textile machinery components has also been approved. Letters of intent covering both the expansions are now awaited. There was further improvement on the export front in the year under review and higher targets for the current year have been set. □

Belsund Sugar

SALES of the Belsund Sugar Co Ltd (Chairman: Mr B. G. Bangur, Calcutta) for the year ended September 30, 1970 have slightly increased to Rs 2.1 crores from Rs 1.6 crores in the previous year. The gross profit was lower at Rs 13 lakhs (Rs 15 lakhs). The net profit, after depreciation and taxation, amounted to Rs 4 lakhs, same as in the previous year. The dividend was maintained at 13.33 per cent.

The company's gross profit margin works out to 6 per cent against 9.3 per cent. The ratio of net profit to net worth comes to 8 per cent (9.5 per cent).

During the year under review, cane crushed was 17.90 lakh quintals (11.60 lakh quintals) and sugar produced was 1.64 lakh

materials and higher wage bill. The net profit, after depreciation and taxation, amounted to Rs 4 lakhs (Rs 9 lakhs). The ordinary dividend has been slashed to 10 per cent from 15 per cent.

The company's gross profit margin works out to 3.3 per cent against 4.2 per

cent. The ratio of net profit to net worth comes to 7.8 per cent (15.5 per cent).

Having made adequate provision for depreciation, taxation, doubtful debts and development rebate reserve and other charges out of the current year's profit and bringing into account Rs 879 from the previous year, an amount of Rs 3.35 lakhs is transferred to the general reserve leaving a sum of Rs 2,720 carried forward to the next year.

Vaikundam Rubber

Proceeds of rubber of the Vaikundam Rubber Co Ltd, Trivandrum, for the year ended December 31, 1970 have declined to Rs 8.43 lakhs from Rs 9.90 lakhs in the previous year. The net profit, after providing Rs 2.27 lakhs (Rs 2.60 lakhs) for taxation, amounted to Rs 5 lakhs (Rs 5.5 lakhs). The dividend has been maintained at 15 per cent. Crop harvested during the year under review was 250 tonnes (244 tonnes) and sale price was Rs 5.11 (Rs 5.26) per kg. The total capital expenditure for the year was Rs 1.37 lakhs.

Ondal Coal

The Ondal Coal Co Ltd, Calcutta, has earned a net profit of Rs 1.34 lakhs for the year ended December 31, 1970 against Rs 1.29 lakhs in the previous year, after providing Rs 5,356 (Rs 4,032) for depreciation and Rs 91,539 (Rs 1.05 lakhs) for taxation. The ordinary dividend has been maintained at 10 per cent. The company's portfolio is represented by investments which are quoted on the Calcutta Stock Exchange with the exception of certain unquoted investments amounting to Rs 3 lakhs. The total market value of quoted investments as on December 31, 1970 amounts to Rs 11.83 lakhs.

Indian Tack and Nail

Sales of the Indian Tack and Nail Co Ltd, Calcutta, for the year ended December 31, 1970 have increased to Rs 28.31 lakhs from Rs 25.38 lakhs in the previous year. The net profit, after providing Rs 2.15 lakhs (Rs 2.11 lakhs) for depreciation and Rs 2.93 lakhs (Rs 1.10 lakhs) for taxation, amounted to Rs 2.17 lakhs (Rs 1.88 lakhs). The

dividend has been stepped up by $\frac{1}{2}$ per cent to $5\frac{1}{2}$ per cent. The general reserve got Rs 2.13 lakhs (Rs 1.86 lakhs). To meet the rise in demand for cut hand tacks, the company went into a partial second shift working of the cut tack plant since the latter half of the year under review. There was a sharp decline in the production and sale of grooved tacks due to raw material difficulties and very high prices thereof.

Preliminaries

Mahindra and Mahindra

Income of Mahindra and Mahindra Ltd, Bombay, for the year ended October 31, 1970 has increased to Rs 32.46 crores

from Rs 29.46 crores in the previous year. The net profit, after providing Rs 36.99 lakhs (Rs 25.51 lakhs) for depreciation and Rs 30.50 lakhs (Rs 41 lakhs) for taxation, amounted to Rs 55.84 lakhs (Rs 41.16 lakhs). The ordinary dividend has been maintained at 11 per cent. Development rebate reserve claimed Rs 13.42 lakhs (Rs 4.98 lakhs). During the year under review, manufacturing activities of the company were at a much higher level than in the previous year. The demand for all products produced and serviced by the company continued to rise at a healthy rate calling for the expansion and rationalisation of manufacturing facilities. To undertake this expansion, different avenues to augment financial resources are being explored. The proposed merger of the Union Bank of India Ltd with the company is the first step in that direction.

NOTICE

THE BOARD OF DIRECTORS HAVE decided to recommend at the forthcoming Annual General Meeting of the Members of the Company, to be held on Wednesday, the 28th April, 1971 at 3.00 p.m. the payment, within the statutory period, of a dividend of 25 per cent on Equity Share Capital in respect of the year ended 31st October, 1970, subject to deduction of tax, as may be applicable.

Pursuant to Section 154 of the Companies Act, 1956 the Register of Members and Share Transfer Books of the Company will remain closed from 21st to 28th April, 1971, both days inclusive, for the purpose of holding the Tenth Annual General Meeting of the Company on the aforesaid date.

By Order of the Board,
DUNCAN BROTHERS & CO., LTD.
Secretaries.

Dated the 8th April, 1971.

EQUITIES

Return to form

BOMBAY, April 14

WITH East Bengal as a factor already discounted, equities were in full form during the week with selected shares recording good gains. Budget uncertainties were there of course but the market seemed to be confident that the corporate sector would be spared additional burdens. The fear that the Government would increase the obligation of the industry in respect of controlled cloth and enhance the penalty for exemption receded, and by and large mills seem reconciled to setting aside 25 per cent of their total output to controlled cloth. The firmness in jute shares on Lyons Range was another factor behind the buoyancy of the market here.

Corporate reports continued to be encouraging and the excellent performance of the Tata group of textile mills contributed not a little to help sentiment and impart strength to the market. Tata Mills has returned to the dividend list after three years with a proposed 6 per cent for 1970. Ahmedabad Advance has proposed to step up the dividend by 3 per cent to 12 per cent. And so has Svadeshi.

Sentiment was also aided by reports that a leading operator who had been holding a huge block of steel shares was able to negotiate a deal and disburden himself of a large parcel of Tata Steel and Indian Iron shares. At the time of writing, Tata Steel was mentioned at Rs 105.50 and Indian Iron unofficially at Rs 12.25.

The time is approaching for Century's dividend, and knowledgeable sources confidently assert that the company is likely to step up the payment by three or four points. That was why Century came in for special attention. Not that it lacked attention at any time but reports of a higher dividend led to considerable replacement buying. National Rayon was also supported for the same reason. The directors of Century Enka have proposed a 6 per cent dividend. This is its maiden dividend; all the same the scrip came in for liquidation as the dividend fell short of expectations. At the time of writing, Century was mentioned at Rs 889 and Century Enka at Rs 350.

Some of the cash scrip like Zuari Agro and Nagpal scaled new highs with Nagpal at Rs 17 at the time of writing and Zuari at Rs 16.76. Sandvik Asia was also firm and the last quotation was Rs 314. The buying spree of the last few days in Scindia abated in view of the postponement of the sale of Jayanti Shipping shares. Among chemicals, Amar Dye was conspicuous and following the fulfilment of hopes about a higher dividend, the scrip advanced by several points before quoting at Rs 227.50. Money was a bit easy. Moreover, a lot of funds that had gone into applications for Garware Nylons issue came back on the market. This helped sentiment.

COMMODITIES

Spot cotton moves down

BOMBAY, April 13

A sharp setback in prices featured trading conditions in the cotton market during the past week. The price fall ranged from Rs 50 to as much as Rs 400 per candy. The virtual disappearance of demand following tight monetary conditions has brought about this distinct decline in values. The spinners' hesitation to extend their commitments was further influenced by the uncertainty over the Government proposal to raise the reserve quota for controlled varieties to as much as 50 per cent of the total production.

In the import section, while there have been indications to show that the Cotton Corporation of India had geared up its activities to some extent to expedite action on getting imports of cotton and staple fibre, by sending out circulars calling for offers, the importers are hard put to it to find sufficient

funds to finance their purchases. The credit squeeze is verily a stranglehold on them. On top of this, they find that some of the mills too want them, the importers, to carry cotton on behalf of the mills, a tall order in the prevailing circumstances.

The following has been the price trend of some of the leading varieties:

	(Rs per candy)	
	For the week ended Apr. 14	For the week ended Apr. 8
Khandesh	3,300	2,550-2,700
Borar AK	2,100-2,350	2,100-2,200
Digvijay Dabhoi ..	2,950-3,000	3,000
Borar L 147	2,600-2,700	2,500-2,700
Kalyan 797	2,200-2,250	2,125
Manavadar CO2 ..	2,750	2,700

In the meanwhile, cotton imports during the current season are placed at 193,670

bales against 412,244 bales during the corresponding period last year.

ART SILK YARNS EASIER

BOMBAY, April 14

A further downward trend in the prices of yarns was the feature of trading during the past week. Art silk yarns lost further ground during the week under review due to an improvement in the supply position from mills. The slack demand from up-country centres also imparted weakness. Staple fibre yarns were neglected at last week's levels. Cotton yarns were subdued.

In the art silk yarns section, 150D National Rayon lost 13 paise to Rs 16.89, 120D shed a like amount to Rs 18.81, 150D Bright Century declined by seven paise to Rs 16.53, 100D Bright South India receded by 14 paise to Rs 22.86, 120D Bright Century was neglected at last week's level of Rs 18.74. Staple fibre yarns (2x34 nF) spot Kiran was subdued at Rs 11.57, same as last week.

JUTE GOODS] BUOYANT

CALCUTTA, April 13

The civil war in East Bengal set in motion an upward price trend in the gunny market here during the past week. Fibre prices were also held fully firm at higher levels. No actual diversion of business from East Bengal has yet taken place, but overseas buyers are watching the events in East Bengal. Both the US and the USSR were in the market. The Government of India was yet holding out but the mills industry expected the DGS and D to place soon orders for B. twills. Some of the State governments, however, evinced interest, while the STC covered some quantity against its export commitments. Hessian 40" 10 oz scored fully firm at Rs 93 but had earlier scored from Rs 92.50 to Rs 95.50. B. twills rose from Rs 280 to Rs 285. As a precautionary measure, restrictions have been placed on hedge trading; the acquisition of fresh long positions in May 1971 delivery in hessian and B. twills hedge contracts has been prohibited.

Last week's rains have helped the growth of jute plants in the early-sown areas. Steps have already been taken to increase this year's crop to 8.4 million bales from 6 million bales last year. Last week arrivals aggregated 30,000 maunds per day, and these were readily absorbed, thus causing prices to rule fully firm at Rs 62.00, Rs 60.50, and Rs 58.50, for Daissee bottoms, Assam bottoms and northern bottoms, respectively.

OILSEEDS DIVERGENT

BOMBAY, April 14

Once again the trend in the oilseeds market was divergent. Castor futures were marked down, groundnut oil was quiet and while forward linseeds were steady, spot material was subdued. The undertone in groundnut oil, however, seemed to be strong in view of the revival of inquiry for extractions. Much to the relief of exporters, the Japanese Government is said to have agreed to permit import of extractions with one p.p.m. aflatoxin. There was disappointment however that the clause relating to 10 per cent was not withdrawn. The trade says that a majority of producers will not be able to sell on Japan.

The weakness in castor was due to heavy arrivals but support was expected to be forthcoming at lower levels. About 1,000 tonnes of linseeds have been tendered in the maturing linseeds contract while tenders in castor were nil.

Comparative prices in rupees were:

Item	6-4-1971	14-4-1971
Castor April	143.00	136.50
Castor June	138.25	133.37
Linseeds April	160.50	162.00
Linseeds July	157.25	157.75
G. Nuts Khandesh ..	192.00	190.00
G. Nut oil	42.80	43.20
Castor Madras Small ..	156.00	148.00
Castor Comm. oil ..	35.60	35.75
Castor B.S.S. oil ..	37.80	35.25
Linseeds Bold	160.00	156.00
Linseed oil f	26.35	26.89

- Modern streamlined deluxe appearance.
- Totally diecast and lighter in weight.
- Improved quality and trouble-free performance ensured by latest production techniques.
- Easier to dismantle; easier to assemble.

WITH NEW REGULATOR

- Latest in design with modern look.
- Ideally suited for concealed wiring.
- Novel rotary switch suitable for operation in both directions.
- Choke coil unit for cooler operation.

How Tatas help you all the time to live better

Sometimes it is interesting to take a look at things — a new sort of look, that makes you see them differently. For instance, look at the things around you that work by electricity.

The ceiling fan that keeps you cool... the street lamp just outside that guides you safely home at night... the mill that makes the cloth you wear... the radio that keeps you in touch with the world.

You can easily think of more things. But you will agree, life would have been dull and difficult without them... without electricity.

For half a century Tatas have been serving you and industry with this low-cost power. And every time you press a switch...

Someone at Tatas is working for you

GOOD DEMAND FOR TEA

CALCUTTA, April 13

The new season's sales commenced with the first auction taking place on April 5, when demand was sustained and all quality teas especially bright Darjeelings and Dooars CTCs rose much above brokers' valuation. Orthodox teas elicited keen competition. Offerings totalled only 266 chests, but are expected to gradually rise in the forthcoming sales. The trade noted with satisfaction that despite higher stocks in the UK last week's London sale evidenced a good demand for North Indians with best and medium Assam CTCs gaining by a penny to two pence per lb.

At sale No 19, leaf offerings totalling 65,414 chests evinced good general demand. Plain orthodoxes and medium BOPs gained. CTC brokeners were firm, and fannings were readily absorbed at dearer rates. Whole leaf grades were sold well.

FOODGRAINS EASY

BOMBAY, April 13

During the past week, the prices of foodgrains continued to rule easy in the local foodgrains market. Moong was an exception to this trend. Among coarse grains, bajra (superior) at Rs 60-65 per quintal showed a fall of Rs 5 on account of poor demand.

Besides, the daily arrivals of bajra at 500 bags were satisfactory and the upcountry advices were discouraging. Malze also declined by Rs 2 to Rs 61 per quintal, due to the slackness in demand. Malze arrivals were limited. In pulses, gram (Punjab) receded by Rs 2 to Rs 80-82 per quintal owing to the increase in daily arrivals of new gram crop. Arrivals were placed at 1,800 bags a day. Urad (Khandesh new) at Rs 148-152 per quintal remained steady.

SUGAR RISES

BOMBAY, April 13

The prices of sugar (C-30) at Rs 194-198 per quintal firmed up by Rs 4-8 in the local sugar market on account of good demand. The current prices of sugar are higher by Rs 11 than the level a year ago. The arrivals were lower at about 800 bags, against the offtake of 1,000 bags. Further, the upcountry prices were encouraging. Today, about 3,500 bags of 'D' grade sugar were disposed off by the co-operative sugar factories at Rs 184.75-185 with ex-mill duty.

METALS STEADY

CALCUTTA, April 13

The demand for industrial non-ferrous metals and their scraps has been steadily on

the increase, with prices being well maintained, following the formation of a popular non-Marxist Government in W. Bengal.

The interim budget has sprung some unpleasant surprises. For instance, the drastic cuts in outlays in certain public sector projects including the Hindustan Copper plant would affect the overall demand for industrial production including non-ferrous semis. Another fear is the prospect of heavier taxation hinted by Mr Chavan. Industry circles thought that the excise net over the non-ferrous metals industry would be broadened in the forthcoming budget. In sustained demand, tin forged ahead from Rs 4,800 to Rs 4,900 per 100 kg. With supplies remaining tight and sellers reserved, clean copper wire scrap gained from Rs 1,355 to Rs 1,360. Virgin lead rose from Rs 421 to Rs 428, but zinc ingots eased from Rs 445 to Rs 440 as a result of the improved supply position.

DIZZY HEIGHTS FOR SILVER

BOMBAY, April 14

Silver has once again crossed the Rs 600-mark level. On Tuesday, it was fetching Rs 608 per kg in weekly delivery and Rs 610 in ready. Such a sharp rise in the price comes after two years. In September 1968, the white metal was quoted at Rs 633. The immediate reason for this buoyancy was said to be the cornering of about 2,000 bars (of 30 kg each) by one operator. But it would appear others have also been quite busy and the holdings of bulls are put at around 4,000 bars against the local stocks of 250 to 300 bars and of 500 bars all over the country. The bulls had taken courage from higher advices from overseas and the demand from smugglers which was currently of the order of 30 to 40 bars a day in Bombay alone. It could be that smugglers have been active because of the forecasts made by some financial experts that another currency storm may be expected this year. These predictions have been coming in since the announcement in the past two weeks of a cut in Bank rates in the UK, West Germany and other countries. Some have argued that we may eventually see a devaluation of the dollar or, if the US refuses to budge, an up-valuation of the deutsche mark, yen and some of the other strong currencies. Whether these experts prove right or wrong, the speculators have taken the hint and the smuggling activity in silver is an indicator. According to trade sources, a smuggler now makes a profit of over Rs 100 per kg. This calculation is based on the unofficial rate of Rs 13.5 per dollar and 174 cents an ounce of silver.

Silver (.996 fineness) which opened at Rs 593 wound up the week at Rs 607 today, with a net gain of Rs 20.50 over the week. Primary gold in unofficial trading commenced Rs 2 lower at Rs 181 and was steady at that level before closing at Rs 181.50 today. Standard gold in official trading began Rs 2 higher at Rs 194 and was traded at between Rs 193 and Rs 192 in subsequent sessions before winding up at Rs 194 today, the net gain over the week being Rs 2. Sovereign was fully maintained at Rs 174.

MONEY TIGHT

BOMBAY, April 14

Tight conditions continued to prevail in Bombay's short-term money market in the past week. The call rate ruled at 10 per cent. In Calcutta, renewals were effected at 10 per cent.

During the week ended April 2, foreign exchange reserves of the Reserve Bank of India rose by Rs 2.22 crores to Rs 352.65 crores. While foreign securities declined by Rs 5 crores to Rs 268.42 crores, balances held abroad increased by Rs 7.22 crores to Rs 84.23 crores. Notes in circulation expanded by Rs 41.68 crores to Rs 4,253.45 crores. Deposits of scheduled commercial banks with the Reserve Bank of India rose to Rs 217.95 crores from Rs 207.10 crores.

Week ended April 2 marked a rise of Rs 21.25 crores at Rs 4,694.91 crores in the total credit made available by scheduled commercial banks. Aggregate deposits increased to Rs 5,901.14 crores from Rs 5,843 crores. Borrowings from Reserve Bank were lower at Rs 356.11 crores (Rs 368.37 crores).

FICCI ANNUAL SESSION

(Concluded from page 711)

Government and industry which, I believe, is very vital; and that is the need for a better rapport between the two. We have to look to the development of our country as an integral whole, not from any sectoral point of view. Whether the development takes place in the private or the public sector, it has to be for the welfare of the nation. To the extent that the Government and industry and business get together in trying to solve problems and put their shoulders to the wheel, to that extent will India emerge stronger in every respect. In the year that has passed, Madam Prime Minister, your colleagues in charge of economic portfolios were good enough to meet the Committee of the Federation and useful exchange of thoughts and ideas took place. It is my earnest plea that such ex-

changes will be kept up, and, may I express the hope that you also will kindly honour the Committee with your presence at one or two sessions, so that matters of common concern may be informally discussed? With the achievements which we already have on the economic front, with the great optimism which the Indian people seem to display in times of great crisis, and with the solid support of the people which you enjoy, we look forward to a period of substantial growth in the seventies in India. In the mighty task of building up the nation, I would like to see that there is a complete identity of thinking as between the Government and industry and business to enable us to do the utmost we can.

Fellow delegates, I should like to assure you that your Committee has always in mind the need to improve the quality and adequacy of service by the Federation which you are good enough to support.

During the last year we have given anxious thought as to what needs to be done to effectively project the image of the Federation before the public, the Government and our own members. It is not as if an old organisation like ours has to make a new bid to acquire a position in the national life. But, in a fast changing society, established institutions cannot rest on past achievements alone. Their future and usefulness will depend on the way opportunities for rendering service to the business community as such and to the public are seized. You will appreciate that while our secretariat is devoted and competent, it has to be strengthened to achieve new goals. It means additional expenditure. Therefore, we have been compelled to increase the subscriptions, and I must thank all the members for responding so handsomely. I do hope and trust that each one of you will enrol more members so that the work of the Federation can be intensified and enlarged. □

Notice

Leipzig Fair

(Concluded from page 689)

this tractor story are limited in number and this correspondent was told that no reference to it had been made in the East German press.

However, some of the Indian importers who were at Leipzig and who generally were quite satisfied with their visit, were inclined to believe that our exporters had run into difficulties because we ourselves had not finalised our buying programme. This was the same thing as saying that because of the rupee trade arrangements the quantum of GDR imports from this country was linked to our imports from that country. But more than all this it could be that the goods displayed at Leipzig by our exporters did not find a priority in the list of imports prepared by the GDR planning authorities.

The point about central control on the GDR's foreign trade should not be overlooked in assessing the possible trend in exports and imports in future. A reference has been made earlier to the statement by

accounted for only 10.2 per cent. The balance of 6.3 per cent was made up by other items details of which are not available.

A major factor in the slow growth of exports of our non-traditional items to the GDR could be that we have not been able to present a list to them of semi-finished or finished products which they could profitably buy from us. On the other hand, our exporters have the difficulty that such techniques of market survey with which they are familiar are of little value in the context of the centralised planning of the economy in the GDR. For instance, for quite some time it has been said that there are vast possibilities of exporting castings to that country and that on the machinery side, investigations would reveal many possibilities not only in castings but in components also and possibly in complete machines as well. The same kind of hope is held out in the transport sector, apart from railway wagons. But little headway has been made in this direction.

Here it is the barrier of information that comes in the way. Indian exporters have little idea about how to study the GDR market. It is also doubtful whether

products India can offer to the GDR more competitively than other countries and what new lines our exporters could make offers to meet the requirements of the GDR organisations in keeping with their own production plans can be studied in depth only if there is constant access to information. The report also pin-points that the GDR buying organisations are not kept fully informed of India's existing and developing potential, which also needs to be rectified. Further, since the future scope for Indo-GDR trade lies in the diversification of India's exports, there is need for more opportunities for manufacturers and entrepreneurs of the two countries to meet as often as possible either in India or in the GDR.

When all this is said, no one should run away with the impression that participation in the Leipzig Fair is of little utility to this country. What needs to be appreciated is that even if it does not serve the purpose of entering into export deals with the GDR on the spot, the Fair could well serve the objective of bringing to the attention of the GDR the semi-finished and finished products which we are capable of exporting, apart from our traditional items. More than that, the Leipzig Fair could help project our industrial image, and this would be beneficial when it comes to trading with industrialised nations and developing countries. In other words, the Leipzig Fair should be looked upon by us as a promotional fair rather than as a trade fair.

Once this is acknowledged certain logical consequences follow. This year, even when about 140 enterprises took part in the spring fair, what were displayed in a major way were our traditional items. No one could get the slightest inkling after going round the Indian exhibits at the collective pavilion and in other halls of the tremendous progress we have made in the industrial field. This was a great disappointment to the Indian visitors to the fair. As it is, we are spending over Rs 5 lakhs in participating in this fair, and even if it means an expenditure of another two or three lakhs of rupees it should be worthwhile to induce our leading manufacturers of engineering and other goods to display their products at this fair. The Government of India is already meeting the cost of transport of exhibits to and from Leipzig and Indian manufacturers should not find it a heavy burden to send their goods to this fair.

But mere exhibition of goods will not be enough. There must be men there to explain the technical and other aspects of the exhibits, a point which is very much on the mind of the participating firms coming from the UK, Japan, West Germany and other industrialised countries. This correspondent was told by the representative of a prominent Indian manufacturer, who was satisfied by putting on some pictures of the machines his company turns out, that New Delhi was reluctant to permit Indian technical personnel to go to Leipzig and almost insisted upon the exhibitors employing the services of Indian students in Leipzig and other parts of the GDR on the ground that this was much cheaper than sending men from this country to the GDR. This is a short-sighted policy and needs to be revised if our participation in the Leipzig Fair is to prove meaningful. □

Commodity composition of exports from India to GDR

(Rs lakhs)

* Figures in post-devaluation rupee terms

the GDR Minister for External Economic Relations that his country's bi-lateral trade agreements with the developing countries provided increasing scope for export by these countries of their semi-finished and finished products. With the planned increase in trade between India and the GDR this should be the case. In fact, without such a trend developing it is not possible to visualise that the total trade between the two will grow at the envisaged rate of 10 per cent. But the progress made in this direction so far has been very limited. The table of commodity composition of our exports to the GDR published alongside brings out this very clearly. Even in 1968-69 traditional items accounted for 83.5 per cent of our total exports while non-traditional items composed of engineering goods and iron ore

our trade mission there can be helpful unless certain facilities are extended to it by the GDR authorities.

Both India and the GDR would appear to be aware of this problem of inadequate flow of information. To this awareness is to be traced the setting up last October in Bombay of an India-GDR trade group under the auspices of the Indian Council of Foreign Trade. A similar group is to be constituted in the GDR, and it is likely to be inaugurated at the time of the 1971 Leipzig Autumn Fair. How far these groups will serve their purpose is yet to be seen.

This point has been emphasised by the Indian Consul-General in a report on the GDR's foreign trade in 1969. It underlines that such matters as what specific

THE CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1970 EDITION

An encyclopaedic work of reference for businessmen and investors. The only Year Book published in this country, which contains comparative balance sheets for two periods.

The information given about each company relates to its date of registration, nature of business carried on, secretaries, directors and their share qualifications, details of capital and shares, capital history, share registration fees, names of auditors, period when accounts close, date of meetings, summary of balance sheets, and progress statements containing provisions for taxation, depreciation, allocation to reserves, net profit, amount carried forward, dividends, highest and lowest prices etc. for ten periods.

Last year the demand exceeded the number of copies printed. All late orders had to be refused. To avoid disappointment, send your order immediately to the Secretary, The Calcutta Stock Exchange Association Limited, 7, Lyons Range, Calcutta 1.

Price Rs. 25.00

Packing and Postage Rs. 10.00 extra.

AIR-INDIA

announces

a drastic reduction in fares!*

Air-India offers heavy reductions under our Affinity Group Travel Scheme. For many sectors, the reduction amounts to over Rs. 2000/-.

What is an affinity group?

It is an association that has been in existence for 6 months prior to travel with a common objective or activity other than travel. In case of travel to the Americas the association must be of at least two years standing.

Examples: Educational institutions like schools or colleges of Arts, Music, Science, Engineering, Medicine, Catering; professional groups like associations of lawyers, physicians, surgeons, pathologists, teachers, artists; clubs like Lions

and the Rotary Club, sports associations, gym-khanas, choirs, dramatic and musical groups etc.

Minimum requirements:

If you are a member of any of the above affinity groups for a minimum period of 6 months prior to travel you may be entitled to the reduction. You have to travel together throughout your journey and your group should not be smaller than 15 persons.

Besides the large reduction under our Affinity Group Scheme, Air-India gives you that extra something, if you haven't been abroad in the past 3 years.

Subject to approval of all Govts.

Slow-moving crash programme

IT was in October last year that an announcement was made about the crash programme for rural employment. Undoubtedly, as it was indicated on the eve of the elections, work was not to start until April 1, 1971. As the conference with the Chief Secretaries on the crash programme amply brought out, a beginning has still to be made. The main bottleneck is delay in financial sanctions from the Union Government. With these procedural delays, it is obvious that the short working season before the monsoons will also be lost: little work would in effect be done almost for a full year after the announcement. Perhaps not every State is ready for embarking on the programme. But for the few States that are ready, the conference of Chief Secretaries had the merit of enabling them to collect their sanctions before they returned to State capitals.

If the conference found State Governments ill-prepared, the reason could not lie in the unwillingness of States to accept from the Centre additional funds which would help them relieve rural poverty and misery. As the discussions made clear, the crash programme had many drawbacks of its own. These drawbacks will inevitably lead to further delays and might even end up in waste. It was difficult, as practically all the States except Rajasthan and Orissa pointed out, to implement the programme in its pristine purity. Daily wages in many areas were much higher than Rs 3 a day which are permissible under the crash programme. Legislation on minimum wages has sought to push them up nearer Rs 5 a day in Kerala and naturally

the State Government was unwilling to fall foul of its own efforts to improve rural wages.

In no State did it seem possible to find a thousand unemployed persons from each district who would stay the course of employment under the crash programme for full ten months at a stretch. There are the busy agricultural seasons when labour is so short that no rural worker is available, according to one Chief Secretary, "for love or money". That is why it was suggested that the working season should not be one and continuous of ten months' duration but should be broken up over the year into shorter periods. Unless this was done, Chief Secretaries seemed to suggest, there will be bare-faced dishonesty in maintaining lists of workers and preparing the bills.

Yet another condition which State Governments found difficult of fulfilment was that employment should be provided only to those who had no other earning member in the family. If indeed there is no earning member, the resulting poverty can be so stark that it may become necessary to employ two persons from the same family—wife and husband. It was unfortunate that the political brains behind the crash programme were not present throughout the deliberations of Chief Secretaries to face the blast of realism and to understand how far removed can thinking in New Delhi be from the felt needs and actual conditions in States. The demand for a higher component of expenditure on material and

for supervisory staff suggests that even at State headquarters, understanding of the scheme is not complete and that the nature and extent of rural poverty are not fully appreciated.

There was, nonetheless, sound advice from Development Commissioners and Chief Secretaries to prevent the crash programme from being placed on the wrong track. No longer can the States and the Centre persist with the belief that the crash programme can be implemented in all its entirety in all districts. The district in itself is an artificial administrative arrangement. It would be more sensible to start the programme in the most backward of the blocks. There was considerable wisdom in the suggestion made by some experienced participants that since employment was being offered at the door-step and to the neediest among the people, wages should in fact be kept lower than the prevailing market rates and employment be offered only to those locally available and not to imported labour. Much was said on the creation of durable assets which do not get washed away with the rains. But the creation of durable assets calls for planning and investigation. The whip-hand of Central authorities seemed to leave no room for careful preparation. It is still not too late to start the crash programme in the most backward districts to begin with. When sufficient experience is gained, the programme can be extended in modified forms to other blocks with pockets of under-employed manpower. Unless planning of the kind advocated by some Chief Secretaries goes into the implementation of the crash programme, this year's experience with it will become synonymous with wasteful and avoidable mistakes.

It could not be the Centre's vain ambition that New Delhi should stand out politically in the public mind as the only begetter of the crash programme. On the other hand, it should seek to profit from the caution and pragmatism of the Chief Secretaries and get for the under-employed the full developmental benefits of the financial outlay. In order to do this, it should have belated but good sense to ask the States for specific schemes, calculated to provide jobs to the under-employed, which are tailored to the needs of individual blocks, taluks or districts. Unless the intention is to cast the crash programme in the uniform mould of the earlier community development movement, there should be room for experimentation and for departure from the Centrally-set pattern. It may be easy to spend Rs 50 crores a year. However, for lasting benefits to the rural community to be left behind at the end of the programme, there should be less insistence on hasty action and greater attention to details of concrete schemes which must form an integral part of each district's plans for road-and-school building, minor irrigation, soil conservation and rural infrastructure.

ADB's opportunity

THE Asian Development Bank is faced with some crucial issues and last week's meeting of the Board of Governors at Singapore tried to grapple with them. The chief among them is the resources position of the Bank and, in particular, the need to enlarge them through an increase in the authorised capital stock of the Bank. The other is the need to earmark a larger proportion of the new capital resources for special funds. Other points raised at the meeting related to the methods of augmenting the Bank's resources and the complaint that the Bank was concentrating its efforts mainly on a few of the countries of South-East Asia. All the members were, however, appreciative of the work so far done by the Bank. Their criticisms and suggestions were obviously offered with a view to improving the usefulness of the Bank for this region.

Mr Y. B. Chavan had to point out that the developing countries' capacity to absorb loans on commercial terms had almost reached its limit. In the last decade, the countries of the region had borrowed loans on commercial terms to the extent of \$150 million yearly. This was perhaps the capacity level for these countries and it should not be exceeded during the seventies. This was the reason why one developing country after another emphasised at the meet-

ing the need for augmenting the special funds resources of the Bank, the loans from which are given on soft terms both as regards the period of repayment and the interest rate.

The emphasis on this point flowed from the fact that, while the Bank granted \$212 million loans from ordinary capital resources, those from the special funds resources amounted to \$33 million. These figures had a special relevance to deliberations of this year's meeting of the Bank because of the proposal to increase its capital base. If the policy of relying mainly on market borrowings for augmentation of resources were to be followed, it could result in pushing up the Bank's regular lending rate. During 1970 the old lending rate of 6½ was raised to 7½ per cent. The reason given in the annual report of the ADB is that this increase was unavoidable in view of substantial changes in market conditions in almost all the important capital markets. The yields on long-term bonds had gone up by more than one per cent and the costs of two bond issues by the Bank in 1969 and early 1970 were higher than the old lending rate. This shows that if the Bank were to rely on borrowing for its additional resources, the lending rates will have to be pushed up whenever the conditions in the capital markets so demanded. The meeting of the Board of Governors, therefore, unanimously passed a resolution asking the Board of Directors to promptly undertake a study of the need to enlarge the resources position of the Bank through an increase in the authorised capital stock.

Another aspect of this question of raising additional resources is one of currencies in which subscription to the capital should be made. Mr Iqbal Hosain of Pakistan made a relevant point when he argued that it would be difficult for the developing countries in the region to make substantial capital contributions in foreign exchange. These countries were short of these resources and they relied upon the Bank to satisfy a part of their need for foreign exchange. It would, therefore, be unrealistic to call upon them to subscribe to the Bank's capital in these currencies. The ADB has, therefore, to find a way out of the host of difficult problems with which it is faced. If the resources are to be raised through increased share capital and if the developing nations of the region are not in a position to make available foreign exchange resources, the only way in which the Bank can mobilise the needed resources is through raising capital from the affluent members of the Bank. The US representative, Mr John Petty, however, told the meeting that his country wanted the Bank to place growing reliance on borrowed resources. This would mean that the prospects of inducing the US to make a substantial contribution to the special funds of the Bank are rather dim. Japan is in a position to go to the help of the Bank and it remains to be seen how far this source would respond.

Another criticism of the Bank's operation was that more than half of the loans granted from ordinary capital resources went to South Korea, Singapore and Taiwan. It was pointed out on behalf of the Bank management that the loans were made to as many as 14 countries during the last year. This may be true. But there is some point in the criticism that three South-East Asian countries had got the lion's share of these loans. This might create an impression that some countries receive special treatment in these matters and the critics might argue that Tokyo seems to have a preponderant voice in the Bank's policy. Such an impression would be unfortunate. This is why special care should be taken to see that it does not grow.

In the final analysis the progress of Asia depends upon its own resources and upon the growing trade and economic co-operation among the countries of the continent. Here again, the trade pattern will have to be guided by the interests of all the countries of the region and especially of those that are struggling with the problems of rapid economic development. It should be the endeavour of relatively more affluent countries of the region to explore the possibilities of enlarging co-operation and trade on the twin principles of mutual help and greater support to the more needy.

ADB MEETING

Renewed plea for soft loans

From Our Correspondent

SINGAPORE.

THE fourth annual meeting of the Board of Governors of the Asian Development Bank, which concluded in Singapore over the week-end, has brought into sharp focus the need for a clear definition of the future role of this institution. From the trend of speeches made by the Finance Ministers from Asian developing countries it was evident that many of them had reservations about the direction followed by the Bank and doubts whether too much emphasis was being placed on the profitability of projects undertaken without reference to the social and economic needs and the balance of payments situation of the countries concerned. But apprehension that the Bank was tending to concentrate in the South-East Asian region were discounted by its President, Mr Takeshi Watanabe, who was unanimously re-elected for another term of five years from November. Mr Watanabe pointed out that loans amounting to \$37 million were granted to Pakistan and \$5 million to Afghanistan last year.

Yet, it was noted that of the \$212 million loans granted from ordinary capital resources last year, more than half went to the three South-East Asian countries: \$45 million to South Korea; \$37 million to Singapore; and \$31 million to Taiwan. During the same year loans from the special fund resources which carry nominal interest rates, were \$33 million bringing the total loan commitments to \$245 million, representing an increase of 150 per cent over 1969. The Bank's performance during the last year was hailed by all the 36 members although Asian developing countries called for more emphasis on contributions from the special fund instead of commercial loans which carry interest rates of up to 7.5 per cent.

The point of view of developing countries was spelt out by India's Finance Minister, Mr Y. B. Chavan, who pointed out that the absorption of loans on commercial terms by the region had been around \$150 million yearly during the last decade and the average during the seventies would or should not be substantially higher. He said that the level of new loan commitments of the Bank from ordinary resources exceeded \$200 million last year and it would be unrealistic to assume that the region would or should maintain this level of absorption. "It would clearly not be advisable to worsen this debt burden of Asian countries with a large volume of new loans on commercial terms", he added.

The major item on the agenda for the Singapore meeting was augmenting the resources of the Bank, and the Board of Governors unanimously passed a resolution asking the Board of Directors to promptly undertake a study of the resources position of the Bank and, in particular, the need to enlarge them through an increase in the authorised capital stock of the Bank. But the unanimity ended there with sharp divisions emerging on how such augmentation should be realised. The problem posed was what percentage of the

new capital stock should be in conventional resources and what percentage in concessional resources. Also, when ordinary resources are replenished, what percentage should be in paid-in capital and what percentage in callable capital.

Another point of divergence was whether the Bank should increase its capital stock or whether it should borrow money from world capital markets. Some of the developed countries felt that borrowing money in the capital market is the answer. The United States delegate, Mr John Petty discussing this point said bluntly: "We see a need for placing primary emphasis on a growing reliance on borrowed resources while maintaining a sound capital structure." But developing nations expressed the feeling that such borrowing would force the Bank to increase its already high lending rates and increase the burden of debt-servicing. Mr Chavan called for a comprehensive study of the question of resources with emphasis on the needs of the developing member-countries.

The case of the developing countries was put forward articulately by Pakistan's Iqbal Hosain who disagreed with Mr Petty and said the Bank should not depend on borrowings to an extent that it has to further increase its rate of interest. He said that he was not advocating that the additional resources should come wholly or mostly through additional capital subscription but that there should be a proper balance between borrowing and capital contribution.

Mr Hosain also pointed out that the developing regional member-countries which need assistance were usually not in a comfortable position with regard to foreign exchange resources and, therefore, could not afford any substantial capital contributions in foreign exchange. "It would be anomalous if these countries which need foreign exchange assistance are called upon at the same time to make large contributions in foreign exchange to the Bank", he added. But Mr Watanabe told a press conference at the end of the meeting that he was confident that a satisfactory formula could be found on this problem of how to increase the Bank's resources. It was perhaps inevitable that considerable attention should be devoted to the role of the special fund, and all developing nations emphasised the need to augment these resources so that low interest loans could be advanced.

Mr Chavan regretted that while loans from ordinary resources went up by 175 per cent last year, those from the special fund resources increased by only 55 per cent. "These figures would indicate that while the Bank has been successful in increasing its activities with ordinary resources, it has played a very modest role where special fund resources are the more appropriate mode of finance", he added. Mr Chavan called on the more advanced countries to pledge their contributions of concessional resources for the second development decade as a whole to give realism and clarity to the difficult job of planning for the future.

Developed countries did respond though not in the anticipated proportions. A total of \$52 million was pledged. Of this Japan was the biggest donor with \$30 million which, the Finance Minister, Takeo Fukuda said, would be completely untied. Other major contributions were from Belgium \$1.8 million, Germany \$17 million and Italy \$2 million.

The special funds also got a boost from the meeting's decision to set aside \$10 million, representing 10 per cent of the capital subscription payable in gold or in convertible currencies since 1969. A similar percentage set aside at the Sydney meeting two years ago, amounting to \$14.5 million, was also transferred to the special fund.

A novel suggestion on the utilisation of the special fund came from Pakistan's Iqbal Hosain who suggested that loans from the special funds should be restricted to countries with per capita income of less than \$200. He criticised the Bank for making decisions on the use of the special funds with little reference to the economic situation of the borrowing country and for being guided almost entirely by the nature of the project to be financed. Of the special fund loans, totalling \$64 million till the end of March this year, major recipients were Indonesia \$23 million, Nepal \$10 million, Ceylon \$7.75 million and Afghanistan \$5 million.

As the special fund contributions were becoming more and more untied in contrast to the situation four years ago, there was a growing demand that technical assistance contributions be also made fully untied so that developing countries could derive maximum advantage out of it. Mr Chavan, in announcing India's contribution of Rs 3 lakhs this year towards technical assistance which is 50 per cent more than last year's, expressed the hope that industrially advanced members would make their contributions fully untied and convertible. Mr Chavan also emphasised the need for trade promotion within the region and asked the Bank to study opportunities and procedures by which it could play its natural role in this respect. Mr Watanabe told pressmen that an expert from the Inter-American Bank, whom the Bank had invited, had collected some information on the matter. This had been circulated to the Board of Governors who have not come to any decision. Mr Watanabe pointed out that this was a complicated process and different from project investments and expected that any action on it would take time.

Speakers during the meeting advocated that the Bank diversify its activities and concern itself with family planning, vocational education and organisation of commodity and local products markets. Mr Watanabe replied that the Bank was a development institution but was prepared to take up new ventures within the framework of this main function. At a press conference Mr Watanabe said that a project in East Bengal for which the Bank had made a loan commitment would continue although physical limitations might delay its implementation. (See Documents for ADB report—Pages 756 and 758.)

MARKET GOSSIP

Monopoly in explosives?

THE announcement by the Imperial Chemical Industries of its bid to take over Atlas Chemical Industries, a speciality chemical and pharmaceutical concern with its headquarters in Wilmington, Delaware, has been headline news in British and American papers. It is indeed a big bid in which Britain's largest industrial group is to pay \$160 million (Rs 120 crores) to acquire Atlas Chemicals in order to expand the business of the ICI in the American market. The Chairman of the ICI, Mr Jack Callard, has underlined the importance of this market by stating that the American chemical industry is expanding at a rate which is adding the equivalent of one ICI group every year.

The news has evoked little interest in this country presumably because people believe that the entire move is one between American and British business. But there can be a fall-out from this merger which is of considerable significance to this country. At one time the ICI enjoyed a monopoly in this country in the explosives field. First, it was the importer of explosives and later on the ICI established Indian Explosives Ltd. The company had an advantage in that it had the resources and also the technical know-how. It was not till Indian Detonators Ltd was established that Indian Explosives Ltd had a rival. Because of the difficulties of obtaining the know-how from British and American sources, Indian Detonators initially had to depend on Hungarian collaboration. Later, however, Indian Detonators entered into a technical and financial collaboration agreement with Atlas Chemical Industries which now holds 50 per cent of the total equity share capital of the company. Originally, shares worth Rs 50 lakhs were allotted to Atlas Chemicals for payment made by it in US dollars and subsequently bonus shares were received along with attractive dividend. With the merger of Atlas Chemicals Industries in the ICI, these shares will be passed on to the latter, which means that the ICI will exercise control over both Indian Explosives and Indian Detonators. It is true that the Government of India has a stake in Indian Explosives. But this was never a big one. Initially, the Government held 17.5 per cent of the shares against ICI's 70 per cent and 12.5 per cent by the public. But after the public issue in 1967 for establishing the Kanpur fertiliser project, the company's share capital underwent a change which reduced the holdings of the Government of India to 12.75 per cent and of the ICI to 51.02 per cent but raised that of the public to 26.22 per cent. The International Finance Corporation also moved in with a share of 10.01 per cent.

With 51 per cent share capital in Indian Explosives and 50 per cent in Indian Detonators, the ICI would again be dominating in the field of explosives in this country. One wonders what policy the Foreign Investment Board would formulate in this and similar cases. Merger moves are on the increase in Britain and the United States. Very recently Burmah-Oil,

which is a 50 per cent partner with the Government in Oil India, announced a decision to merge with the American Continental Oil Company, and New Delhi has already been apprised by representatives of Burmah-Oil of this move. The sooner a decision is taken by the Government on the policy to be followed in such cases, the better for the nation's economy since the issue of a possible foreign domination in strategic fields of the economy is involved. □

Mahindra-UBI merger

THE scheme of amalgamation of the Union Bank of India Ltd with Mahindra and Mahindra Ltd has now gone back to the Bombay High Court. Under the directions of the High Court, the two companies had held separate meetings of their shareholders and these meetings approved the scheme of amalgamation, earlier proposed by the boards of directors of the two companies, with one modification. This modification related to the option given to the shareholders of the Union Bank of India Ltd to convert after a period of five years the bonds that they would be receiving from Mahindra and Mahindra. The amalgamation scheme had provided that every shareholder of two shares of the Union Bank of India Ltd, which has received a compensation of Rs 3.10 crores from the Government, would be entitled to receive one equity share of Mahindra and Mahindra of the paid-up value of Rs 10 and one convertible bond of Rs 6 bearing an interest at 8 per cent per annum, redeemable after 8/12 years. But there was the option given for the conversion of 10 bonds of Rs 6 each into three shares of Mahindra and Mahindra at the end of five years. Under the modification proposed by the LIC and the UTI and accepted by the shareholders, the conversion of bonds after five years would be at a premium of Rs 8 instead of Rs 10. The net effect will be that holders of these convertible bonds would be entitled to receive three equity shares of Mahindra and Mahindra against nine instead of 10 convertible bonds. Mahindra's share is currently quoted at Rs 15.76.

It was earlier envisaged that the scheme would come into force from May 1, 1971. This is now not so sure but efforts are being made to see if the necessary legal sanctions can be obtained before the High Court vacation starts next month. Market circles are keenly awaiting the Government's reaction to the amalgamation scheme. It is being pointed out that the Union Government had in the case of the merger of the Central Bank of India Ltd with Telco raised the point about this merger attracting the provisions of the Monopolies Act. The objection was then overruled by the High Court. □

Cotton: A storm in tea cup

A POSSIBLE confrontation between the Maharashtra State Government and the Centre on the former's scheme of monopoly purchase of cotton seems to have been averted. Latest reports suggest that New Delhi would soon give green signal

to Maharashtra to go ahead with its scheme. The Centre seems to have re-lented in its opposition following a meeting between the Union Minister for Finance, Mr Y. B. Chavan, and Union Minister for Foreign Trade, Mr L. N. Mishra. In the State Assembly last week, the Minister for Co-operation, Mr Y. J. Mohite, had declared that the State would "battle it out" with the Centre if the latter was not prepared to give the clearance.

The State Government is awaiting a communication from the Centre which reportedly wants two significant amendments made in the legislation to be introduced in the State Assembly. The Centre wants to ensure that monopoly procurement of cotton in Maharashtra is done at prices fixed by it. As and when the Cotton Corporation of India takes full charge of the purchases of cotton in the domestic market, the agency of the State Government should become an agency of the Corporation. The State Government, it seems, has no objection to both these suggestions.

Maharashtra produces about 17 lakh bales of cotton valued around Rs 160 crores. Market circles are wondering what proportion of a trade of this dimension would be taken over by the governmental agency. As it is, the necessary legislation is yet to be enacted. Provision of suitable administrative machinery and finance would be the two main tasks facing the State Government. The Government's contention is that its entry in jowar and other agricultural commodities markets had ensured a fair price to the producer. This had also brought about an increase in yield per acre. The implied suggestion is that similar would be the experience with cotton where productivity has assumed so much significance. □

Cheaper coffee

LAST February the revised estimate of 1970-71 coffee crop was placed at 82,000 tonnes, as against the previous estimate of 75,000 tonnes. In the light of this revised estimate, the Marketing Committee of the Coffee Board decided then to allocate 40,000 tonnes for the internal market during the calendar year 1971. The committee had also recommended that a quantity of 36,000 tonnes be earmarked for export out of the 1970-71 crop to cover the requirements of both quota countries and non-quota countries.

Coffee prices have declined considerably since February. It is reported from Coimbatore that in the auction held on March 30 prices touched the rock-bottom level as bidders were scarce. The bumper crop of 1970-71, estimated by the trade at 90,000 tonnes has spelt not only lower average prices at recent auctions but also lower retail prices. The Coffee Board itself, which started selling seeds again from last January, has been supplying seeds to its depots for sale to the public at a price 2.5 per cent lower than the average auction prices. This selling policy of the Board is presumably intended to bring down retail prices further in the vast sector of private trade which handles about 80 per cent of all coffee sales to the public. □

SURVEY

THE PRIVILEGED SEAMEN

DID the Indian seamen who struck work for 17 days over the issue of bonus win their point? Perhaps, they have, though in part, although the agreement with the Indian National Shipowners' Association (INSA) that led to the calling off the strike does not directly provide for the payment of bonus. The National Union of Seafarers of India (NUSI) has agreed that the question should be looked into by the National Maritime Board (a bipartite body of shipowners, both foreign and Indian, and Indian seamen) by the end of this month. The NMB is to decide whether the bonus is to be paid at all to the seamen and, if so, what should be the quantum. If the Board itself finds it difficult to arrive at a solution, the representatives of INSA, according to the agreement, will convene another meeting with the representatives of seamen within 15 days from the date of meeting of the Board with a view to finally settling the issue. The implied understanding would appear to be that if the foreign shipowners refuse to pay the bonus—and in all likelihood this may be the case—the Indian shipowners would pay them something.

Whatever the final outcome, there is no doubt that the strike was most irresponsible. Apart from the fact that it held up exports, tied up 35 ships, and cost the shipowners at least about Rs 60 lakhs, excluding the loss caused owing to deprivation of opportunities to earn freight on overseas routes, the strike came within a few months of an accord that had promised industrial peace in the industry for two years. In last November only the shipowners had agreed to concede about 20 of the 30 demands that had been put up by seamen. Besides such benefits as increase in the earned leave and medical facilities, the wages of seamen were increased by Rs 30 with effect from November 1, 1970 and by a further Rs 10 with effect from November 1, 1971. What was also significant was that at the negotiations that preceded this agreement the demand for bonus, originally included in the charter of demands, was withdrawn by the NUSI. The renewal of this demand within a month of the agreement, therefore, came as a complete surprise to the shipping industry.

The case put up this time by the NUSI was that, whatever the provisions of the Bonus Act relating to seamen, there were port and dock workers who get *ex-gratia* payment in lieu of bonus. Even the highly paid officials of the Indian shipping companies reap the benefits of the Bonus Act. To the question then as to why the demand for bonus was withdrawn at the November negotiations, the replies of such leaders as Dr Shanti Patel and Mr K. K. Khadilkar implied that it was a strategy adopted at that time. There was also the answer that since the issue of bonus was not discussed at the November negotiations, going on strike on that issue was not a breach of the agreement then reached.

Obviously, the seamen know their strength (the Union Labour Minister, Mr R. K. Khadilkar, termed recently port and

dock workers and seamen a "privileged class"). Under the Merchant Shipping Act, Indian shipowners are rightly required to employ only Indian seamen. It is this which places the seamen in a strong position with the Indian shipowners. The seamen also know their limitations and that is why they are not so keen to press their demand for bonus with foreign shipowners who are neither covered by the Bonus Act nor are obliged to employ Indian seamen. They will prefer to employ Indian seamen so long as they find the services of these seamen cheaper compared to those of other nationality. If the Indian shipowners pay bonus it will be only under duress. For there was the threat from Mr S. R. Kulkarni, President, All-India Port and Dock Workers Federation, that the strike will be escalated to the other areas of the water front, and it could have meant the tying up of many more than 35 ships that suffered during the seamen's strike.

PING-PONG IN PEKING

EVENTS in the last two weeks have raised hopes for a detente in the Sino-US relations. First, came an invitation to the American ping-pong team for a friendly match in Peking which was promptly accepted by Washington. Simultaneously came the entry of American correspondents into China ostensibly to cover the ping-pong matches. President Nixon subsequently reciprocated the Chinese overtures by announcing major concessions in trade and travel such as permission for the use of American dollar for China trade, supply of fuel to Chinese ships and aircraft by American oil companies and freedom for the US vessels and aircraft to carry Chinese cargo between non-Chinese ports. All this, to quote a phrase by the Chinese Premier, Chou En-lai, has opened "a new page in the relations" between Washington and Peking.

Mr Chou En-lai, however, continues to make a distinction in his public utterances between the American people and the US Government. This is understandable in view of the antagonism between the two Governments ever since 1949 when the US Seventh Fleet was deployed to guard the Taiwan straits. This feeling might take time to subside. But whatever flirtations are there between China and the US, the question of Taiwan would overshadow the prospects of a full detente. The present thinking in the State Department is to get both China and Taiwan accepted as two different nations in the UN. This is obviously unacceptable to Peking as also to Taipei. Generalissimo Chiang Kai-shek continues to stake his claim as the *de jure* head of entire China and has apparently been taking all the necessary steps to face a Peking-Washington thaw. Apart from Taiwan, two other considerations that would weigh heavily with Washington are the reactions of Tokyo and Moscow. Japan is naturally concerned over any US effort to write off Taiwan as that country forms the first line of Japanese defence. For the Soviet Union any move between

Peking and Washington in the superpower triangle is a matter of vital concern. The easing of tensions between China and the US would place Washington in the enviable position of being able to play one communist power against another. □

HURDLES FOR SALEM PLANT

THE feasibility, in purely technical terms, of basing steel production on Neyveli lignite and Salem magnesite iron ore—both with their peculiar chemical characteristics—does not seem to have been established beyond the shadow of a doubt. Samples of lignite and iron ore were sent to Poland, East Germany and Japan in the fifties for experiments. That these experiments were probably none too conclusive from the standpoint of commercial production of steel on a large scale is a fear that has just been revived by the report that the Union Ministry of Steel is grappling with some unsolved technical problems. One such problem is posed by the original miscalculation relating to the sulphur content of the lignite char. The earlier belief that carbonisation would substantially reduce the sulphur content of Neyveli lignite has been belied in practice, for experience to-date has shown that the sulphur content of the char (that is, after carbonisation of crude lignite) is as high as 0.7 to 1.2 per cent. The kind of technology appropriate to dealing with this high sulphur content and the effect of such technology on the economics of manufacture of special steels are matters calling for another technoeconomic investigation.

Three other problems are posed by iron ore, limestone and dolomite, respectively. As for iron ore, it is said that the tests already carried out are inadequate from the twin standpoint of amenability to mining and grinding and of recovery ratios. The problem in respect of limestone is that deposits of this mineral available in Tamil Nadu are either poor in quality or, where good in quality, suffer from other defects. As for dolomite, it is not known whether adequate deposits of this important mineral raw material are available in suitable quality within the State. With so many technical and raw material problems remaining to be solved, the Salem steel plant project bristles with practical difficulties. The question is how well or how soon the Salem plant will manufacture special steels. □

A MINI-NATO FOR ASIA?

THE Five-power defence arrangement (Singapore, Malaysia, the UK, Australia and New Zealand) concluded last week in London makes a significant departure from the conventional treaties: it does not call for automatic retaliation in the event of any armed attack on Malaysia or Singapore by others. On the contrary, "the five Governments would immediately consult together" to decide what measures should be taken jointly or separately. The emphasis on the word "consult" thus limits the binding on ANZUK nations (Australia, New Zealand and the UK) to defend the two Asian countries, Singapore and Malaysia. The proposals accepted by the London

conference include broadly the setting up of (i) an air defence system for Singapore and Malaysia on September 1, (ii) an air defence council comprising senior representatives of each nation to run the air defence system and (iii) a joint consultative council to provide a forum for regular consultation on matters relating to defence arrangements.

The obvious question raised is against whom are these defence arrangements. As the British Prime Minister, Mr Heath, pointed out recently in the House of Commons, the external threat perceivable at the moment in the region lies in the guerilla forces north of the Malaysian border—Chin Peng and the remains of his Malaysian Communist Party. The continued stationing of ANZUK forces with a consultation machinery for defence arrangement might serve as a deterrent against any attempt to cause trouble by the Chin Peng bands. But beyond this the treaty seems to have not much relevance. □

STATE BUDGETS

Goa, Daman and Diu

ON March 22, the Chief Minister, Mr Dayanand B. Bandodkar, who is also the Finance Minister, presented the 1971-72 budget to the Assembly showing an overall deficit of Rs 12.96 crores. The revenue account, with receipts at Rs 7.64 crores and expenditure at Rs 15.36 crores, reveals a deficit of Rs 7.72 crores. This revenue deficit is expected to be met through grants-in-aid from the Central Government. The capital receipts are placed at Rs 7.62 crores and the capital expenditure at Rs 12.86 crores resulting in a deficit of Rs 5.24 crores on capital account. The Chief Minister expects that the deficit on capital account will be reduced by recoveries on account of receipts relating to Government schemes such as foodgrains, milk and fertilisers. As regards resource mobilisation, the Chief Minister has proposed to increase the duties on Indian-made foreign liquor and motor taxes which will yield additional Rs 17 lakhs to the State exchequer. The 1971-72 Annual Plan outlay of the Territory has been fixed at Rs 7.80 crores. Mr Bandodkar told the Assembly that the Planning Commission had agreed to increase the outlay by Rs 30 lakhs, if the Goa Government would mobilise additional resources to that extent during the next financial year.

Nagaland

MR Chitten Jamir, State Finance Minister, presented the 1971-72 budget to the State Assembly on March 22, 1971. The total expenditure envisaged in the budget is Rs 36.85 crores as against the total receipts of Rs 32.52 crores, resulting in an overall deficit of Rs 4.33 crores. Out of the total receipts, the State will contribute Rs 2.09 crores and the balance of Rs 30.43 crores will be met through Central assistance. No new taxes have been proposed to cover this deficit and a part of it is expected to be covered by rescheduling the rates of excise duties and taxes. The existing taxation measures will be implemented more effectively. The outlay for the 1971-72 Annual Plan of the State has been fixed at Rs 8 crores, as much as the anticipated Plan expenditure during 1970-71. According to the Finance Minister, the top priority in the 1971-72 Plan has been given to the construction of roads which are to be about one-fourth of the

Special statistics on capacity utilisation in major public sector units :

THE WEEK

THE Acting President of Bangla Desh, Mr Nazrul Islam, formally announced on April 17 the birth of a sovereign democratic republic of Bangla Desh at a function in Mujibnagar, about 150 km from Calcutta.

The Pakistan Deputy High Commissioner in Calcutta "defected" to the side of Bangla Desh on April 18. The Deputy High Commissioner, Mr Hossain Ali, hoisted the Bangla Desh flag on top of the mission building and declared his "total unequivocal allegiances to the independent, sovereign and democratic republic of Bangla Desh". Meanwhile, Pakistan has informed the Ministry of External Affairs that a new Deputy High Commissioner has been appointed in Calcutta—a West Pakistani, Mr Mehdi Masud—and has asked New Delhi to clear the premises of persons "who might have taken unlawful possession". India has replied that the possession of premises was an "internal matter" for Pakistan to settle.

Three weeks after the West Pakistani army launched its offensive in Bangla Desh, fighting continued all over the territory. The important town of Mymensingh in the east and Kushtia town in the western sector were still held by the Mukti Fouz. According to reports from across the border, Pakistan has been able to bring 24 Russian tanks to Dacca to strengthen its forces. There have also been reports of growing food shortage in towns.

The Union Minister for Shipping, Mr Raj Bahadur, announced on April 20 in Bombay that the Railway Board had agreed to provide five lakh tonnes of coal cargo annually to coastal shipping. Accordingly, 20,000 tonnes of railway coal will move from Calcutta to Tuticorin and another 20,000 tonnes from Calcutta to west coast per month.

Dr Jayanti Dharma Teja was brought under custody to India from London on April 16 to answer charges of misappropriation of the funds of Jayanti Shipping Co of which he was Chairman. He was produced before the Additional Chief Judicial Magistrate of New Delhi who remanded him in judicial custody till April 30.

According to an announcement by Mr H. G. Vartak, Food and Civil Supplies Minister of Maharashtra, in the State Assembly, wheat will be freely available throughout the State with effect from May 1. However, rationing in rice will continue. In the Greater Bombay rationing area the rice quantum per head per month would be increased from three to four kilos initially for the month of May. The decision will be reviewed thereafter. In other parts of the State, rice supply will be increased from two to three kilos and in villages from one and 1½ kilos to two kilos. All restrictions on the movement of paddy throughout Maharashtra, but excluding the Greater Bombay rationing area, has been removed upto September 30.

The Union Government announced on April 21 that the procurement price of all varieties of wheat other than indigenous red would continue to be Rs 76 per quintal in order to provide continued incentive to the farmer. The State Governments will fix the prices of indigenous red variety of

wheat in consultation with the Central Government but they would be at least Rs 2 lower than the price of standard variety. Procurement of wheat from the 1971-72 rabi crop will be four million tonnes. The issue prices of all varieties of wheat including amber variety will be fixed at Rs 78 per quintal for maintaining the price line.

Air-India's first jumbo jet "Emperor Ashoka" landed at the Santacruz airport on April 18. The first Commercial flight of the plane is scheduled for May 19. (See also Business Report)

The Supreme Court made an interim order on April 16 allowing the manufacturers of Ambassador, Fiat and Standard Herald (four-door model) cars to increase their ex-factory prices in accordance with the recommendations of the Car Prices Commission, but subject to the condition that they would have to refund the excess, if any, arising out of the prices fixed by the Court in its final order. The order was made pending disposal of writ petitions by the Premier Automobiles and others. The manufacturers of Ambassador Mark II are permitted to sell their cars for an ex-factory price not exceeding Rs 15,769, Fiat 1100 Rs 14,787 and Standard Herald Rs 15,220. The Court also directed that the manufacturers should pay the dealers' margin as per the recommendations of the Commission appointed by the Government—Rs 1,050 for Ambassador, Rs 900 for Fiat and Rs 860 for Standard Herald.

The Supreme Court stayed on April 16 the Kerala Government's ordinance acquiring unused forest lands in the Kannan Devan tea estates.

The Reserve Bank of India raised on April 17 the ceiling on the rate of interest for pre-shipment (packing) and post-shipment credits by 1 per cent to 7 per cent. The ceiling remains unchanged at 6 per cent for credit advanced to exporters for goods shipped on deferred payment terms.

India, Indonesia and Malaysia signed on April 21 in Manila an agreement to establish a pepper community to provide concerted action in solving problems of pepper marketing.

India signed the 10th yen credit agreement with Japan in Tokyo on April 20 amounting to Rs 19 crores. The credit is to help India purchase from Japan non-project commodities like steel, components for manufacturing plants, trucks, tractors and power tillers and fertilisers and chemicals. The loan carries a 5 per cent interest and is to be repaid in 20 years.

The Algerian Government froze all the assets of the French Renault car factory in Algeria on April 20. The immediate provocation for this step was the French threat to end its "special relationship" with Algeria.

The UAR, Libya and Syria agreed on April 17 on the formation of a federation to be called the "Federation of Arab Republics".

State budget

The Himachal Pradesh Finance Minister, Mr Karan Singh, presented the budget for 1971-72 to the State Assembly on April 16. The budget showed a deficit of Rs 30 lakhs and had no new tax proposals.

Money easy

Conditions in the Bombay short-term money market were easy as of Wednesday. The demand for funds was maintained. In the inter-bank call section both renewals and fresh money were reported at 7.50 per cent. In the Calcutta market the rate ruled at 6 per cent.

Price index down

At 180.3, the wholesale price index registered a fall of 0.4 per cent. It stood 2.6 per cent above the level a year ago.

PEOPLE

MR S. L. Mehta has been elected Chairman of the Indian Jute Mills' Association for 1971.

Mr Shantilal C. Kadakia has been elected President of the Paper Traders' Association for the year 1971.

Mr Madanlal K. Gupta has been elected President of the All-India Stainless Steel Industries Association for 1971.

50 years ago

The all-round slump in metals is fully reflected in the low rates that are now ruling for the shares of local producing companies. Like the flowers that bloom in spring the quoted prices of Bengal Brass at 3½, of Britannia Brass at 9½, and Bengal Lead at 5, have nothing to do with the case; but when we see the ten-rupee shares of Indo-Burma Tin quoted at 5, which was the fixed rate before the investments appreciated last week upon the strength of a favourable progress report; Burma Finance and Mining at 6½, and Mergui Tin Dredging at 3½ we may be sure that the weakness of the commodity market is more responsible for these all-round declensions than the depression in trade, adverse exchanges,

labour troubles and the money stringency. The causes that have led to the fall in these local share values are fairly general, nevertheless, and as the declension in base metals is no doubt based on the drooping tendency that now prevails in almost every mart it is impossible to completely disengage the downward movement from the phenomena that attend the world-wide slump. What applies to the metal trades is, indeed, applicable to most other trades in this respect; so that when we turn, as an example, to the report for 1920 of that well-known Cornish tin mining company, the East Pool and Agar, we find that its present difficulties and disabilities are similar, in many respects, to those of most other industrial undertakings.

Lombard Bank
Deposit Account**

A Bank Deposit Account with Lombard provides a good rate of interest, with absolute safety for your capital - leading to financial peace of mind.

7%

Deposits at 6 months' notice of withdrawal can earn 7% interest per annum, but you can withdraw up to £100 on demand during each calendar year. Interest is paid half-yearly without deduction of U.K. tax.

8¹/₁%

Sums of £5,000 and over fixed for 12 months can earn a high rate of interest (currently 8¹/₁%), paid without deduction of U.K. tax.

Your Deposit is supported by Capital and Reserves exceeding £14,000,000 and Lombard is a member of the National Westminster Bank Group whose Capital and Reserves exceed £344,000,000.

Opening an Account is simplicity itself, so write now to the General Manager for further details and a copy of Deposit Account Booklet No. AO.91.

REPORT

THE NATION

From Our Own Correspondents

WHEAT PRICES

The cost of pleasing farmers

NEW DELHI.

THE State Chief Ministers at their meeting with the Food and Agriculture Minister in New Delhi last week generally agreed to maintain the procurement prices of wheat in the new season at the existing levels. The Chief Ministers of Punjab and Haryana, the two major wheat-producing States, actually wanted an increase of Rs 4 to Rs 5 per quintal in the procurement prices on the plea that the cost of inputs had gone up. But the realisation that an increase in the issue prices of wheat released through the public distribution system cannot be avoided if the procurement prices were raised and that the resultant burden will have to be borne largely by the poorer sections of the people obviously influenced the majority of the Chief Ministers in favour of retaining the prevailing prices.

In fact, this was the main consideration that weighted with the Agricultural Prices Commission in recommending a slight downward revision of the procurement prices in the new season from Rs 76 to Rs 74 per quintal in the case of the indigenous white and Mexican varieties of wheat, and from Rs 71 to Rs 74 which is the price range for other varieties to Rs 68. The Commission rightly held that if the procurement prices remained unchanged and the issue prices were to be maintained at the present level in the interests of the vulnerable sections of the society, the Government would have to subsidise its food distribution operations to the extent of Rs 35 crores against Rs 10 crores in 1970-71. A subsidy of this order even under normal circumstances would be a heavy drain on the national exchequer. But when the country is in desperate need of resources for development, this subsidy is neither justified nor desirable. Yet, the Chief Ministers plumped for a massive increase in subsidy, as only by retaining the procurement and issue prices at existing levels they could avoid hurting directly the producer as well as the consumer. With the elections to many State Assemblies not far away, the Centre probably could not but acquiesce in this.

It is, however, welcome that the Chief Ministers have agreed to the procurement target of four million tonnes suggested by the Commission for the 1971-72 season. Since in the last season procurement was stepped up to 3.2 million tonnes from 2.4 million tonnes in 1968-69, it should not be difficult to procure an additional eight lakh tonnes in the current season. The stocks with the Central and State Governments increased from 4.3 million tonnes to 4.8 million tonnes during the 1970-71 season. If the procurement target for the new season is fulfilled, the Government will have achieved its objective of building up a buffer stock of five million tonnes. It should then be possible to put an

end to the import of foodgrains under PL 480 possibly by the end of this year as indeed is the Government's intention.

While the self-reliance that this will lead to in the matter of food supplies should be wholeheartedly welcomed, it has to be ensured that the elimination of the country's dependence on concessional foodgrains does not result in higher prices of wheat. With the steady decline in the proportion of imported wheat in the total quantity of wheat released through the public distribution system, the losses on distribution have been increasing because the landed cost of imported wheat has been much less than that of the indigenous varieties. The Government has been subsidising these losses. The losses will be of much greater magnitude when PL 480 food imports are stopped. But the Government can go on bearing this ever-increasing subsidy only to the detriment of its development activities.

A way out is to increase the issue prices of different varieties of wheat. These had more than doubled between 1964 and 1970. Any further increase in the issue prices will hit hard the poorer classes. At any rate, in the interest of price stabilisation which is an imperative this must be avoided. The alternative is to reduce the procurement prices. As the Commission has pointed out, the best way of providing incentives to cultivators is by protecting their profit margins through improvement in the efficiency of cultivation and the consequential reduction in the unit cost of output rather than through price support. □

INDUSTRIAL RELATIONS

Bane of politically organised unions

BOMBAY.

IN his presidential address to the 38th annual general meeting of the Employers Federation of India held in Bombay, Mr Naval H. Tata referred to some of the important problems concerning industrial relations in our country. The employers have complained repeatedly that trade unions are controlled by politically motivated leaders. This results in industrial disputes which could be avoided if political considerations are kept out. Referring to this, Mr Tata said: "This feature has unfortunately become a chronic ailment of our industrial relations which may, one day, reluctantly compel the employers to appeal to Government to permit us to recognise, as a bargaining agent, a committee of representatives directly elected from amongst the workers for collective bargaining at unit level, thus excluding

all outsiders. This may cut right across the trade union movement in the country, and I would hesitate to suggest such a drastic remedy. However, the country is in desperate need of freeing the workers from politically organised unions whose avowed object is to create intra-union and inter-union rivalries."

The workers themselves are becoming increasingly aware of this weakness in their movement. There are instances where the workers have refused to follow the advice of their leaders when they have felt that the advice was not purely on considerations of the interests of the labour. As it has happened, however, in many of these instances the trade union leaders had told the workers not to precipitate crisis and the workers had felt that it was possible for them to serve their interests better through a strike action. There is another side of this situation also. The trade union leaders themselves are finding it increasingly difficult to press the trade unions to follow a line that suited their political strategies. A favourable climate, therefore, does exist for eschewing politics from trade union movement. What is needed is better guidance to the workers under a given situation which would help them in weighing all the aspects of a situation and to decide their action accordingly. Of course, there would be occasions where the workers and the leaders would feel that a direct action is called for, while the employers might think otherwise. Such a conflict could only be resolved through genuine collective bargaining. It should not be difficult for the leaders of the two sides sitting round the table to arrive at a solution acceptable to both.

Another important point referred to by Mr Tata was regarding the decision announced by the Government of India to go ahead with a co-ordinated wage policy and an integrated incomes policy to check the inflationary trends in the economy. In this connection, Mr Tata remarked: "It would be unfortunate if, in the name of an incomes policy, certain sources of income are drastically scaled down, with an adverse impact on incentives and availability of talent and skills for higher administrative cadres, while industrial wages remain unregulated or even revised upwards on grounds of political policy. Ceilings on wealth and incomes could only be considered as a part of an integrated national policy embracing all incomes of all sectors of the economy, including urban and rural, industrial and non-industrial, as also the agricultural sector which constitutes the core of our economy. Merely tinkering with problems of any one particular sector, in isolation to the exclusion of others, would create imbalances and result in far greater disparities of incomes than at present."

These remarks are unexceptional. At the same time the employer cannot ignore that the workers have become sufficiently conscious and organised to insist on a fair share out of the total income of an industrial concern or an industry. Just as it

will be wrong to judge the level of profits and incomes in terms of the lowest paid strata of the economy, it would be equally wrong to judge the wage level on this criterion. The real solution to the incomes problem is larger productivity and greater production, creation of more job opportunities through greater development of labour-intensive industries such as cotton textiles, jute, collieries, mining and agriculture. This problem, however, should not be confused with that of wage policy in an organised industry.

Mr Tata has complained that the policy of hundred per cent neutralisation of the rise in the cost of living through dearness allowance is inequitable and it has distorted the wage structure in many industries. As against this, the Government has to take into account the growing unrest among the workers at the continuing erosion of their real income through higher prices. It will be worthwhile for the employers to devise ways and means of checking the price rise in consultation with the Government. The employers are right in arguing that the price rise is the inevitable consequence of increase in cost of production and taxes. But for breaking this vicious circle, it is not enough to adopt a policy of containing wages. There will have to be better managements, cuts in overhead costs and better marketing research. It is a huge problem and the organised workers would not agree to bear the entire burden of cutting the costs.

All these issues of industrial relations could be solved better if the Government revised its decision to shelve the National Labour Commission's key recommendations for the creation of a new machinery of industrial relations. Mr Tata was right in calling upon the Central Government to implement expeditiously the key recommendations of the Commission to set up Industrial Relations Commissions as agreed to by the Standing Labour Committee last year. These commissions could be the proper forum where all the vital issues regarding industrial relations could be properly discussed and acceptable solutions could be found. □

CROP INSURANCE

Basic issues yet to be identified

BOMBAY.

SO much has been talked about the benefit of crop insurance to our agriculture for so long, and yet it would appear that the basic framework of such a scheme is still to be worked out. That was the impression created by the discussions at the sixteenth annual conference of the Federation of Insurance Institutes. The conference discussed basic issues such as whether crop insurance should be linked to the value of the crop or to its quantity, whether the premium should be paid in cash or in kind and whether the insurance should be partial or full, and what should be the formula for determining the premium in the case of such a crop as rice.

Mr P. Santhanam, who led the discussion on the general scheme of crop insurance, pointed out that the fluctuations in agricultural prices have made the problem of crop insurance complicated. If the

value of the crop is linked to the market prices, the date on which the price of the produce has to be taken will have to be fixed. If the quantity of crop is considered as the basis of insurance, it could not be overlooked that a diminished quantity of produce in a particular year may mean greater value for the crop.

Mr Santhanam was of the view that the payment of premium should be made in kind. But then this would necessitate construction of silos and godowns where the premium paid could be restored. Considering the moral hazards, partial insurance or under-insurance should be provided as was done in the case of fire. As regards the premium to be paid, the view was expressed that initially at least a uniform rate of premium per acre for all areas may have to be charged. The insurance should be made compulsory in selected areas and the village panchayats should be harnessed to the task of determining the average production and other issues.

On the specific question of rating of rice-risk, Mr A. G. Bhanu, also of the LIC, proposed the formula that the rate of premium should vary between 3.12 per cent and 6.11 per cent of the average yield. In most of the States 3.12 per cent would be the rate for insurance and the highest rate of 6.11 per cent would be for Orissa, where co-operation and agriculture are both in a backward state.

Even when these issues of premium and allied matters are resolved, the important question would remain as to the agency which will operate the scheme. The State Governments should be the natural choice since they have an extensive administrative machinery functioning in districts and villages. But the States themselves have to be given the green signal by the Centre adopting the needed legislation. In its absence even a pilot scheme proposed by Punjab had to be abandoned. It is stated that New Delhi has under contemplation a scheme to set up crop insurance fund of about Rs 100 crores, but it is not likely to materialise unless all the intricacies associated with crop insurance are resolved. There is an urgency in tackling them since the banking system is pumping in lot of credit in the agricultural sector. Those funds must be assured not only safety but also adequate return. □

KERALA

Decisive voice for Congress (R)?

TRIVANDRUM.

A RECONSTITUTION of the Government of Kerala seems to be in the offing, with the addition of representatives of the Ruling Congress and the Kerala Congress, and the exit of some of the present Ministers from the Cabinet. The preliminary round of meetings and discussions are already under way. The co-ordination committee of the Cabinet has asked for the views of the Ruling Congress. This is important as the present government exists on the votes of the Congress representatives in the legislature.

Opinion in the Congress (R) seems to have veered round in favour of joining the Cabinet. The idea is to broad-base the Cabinet, with the Ruling Congress having a decisive voice, and with the allocation of seats in the Cabinet on the basis of the strength of the constituents in the legislature. If this principle were to be accepted, the parties now represented in the Cabinet will have to reduce their strength.

Speculation is already rife, on who will be chosen to the Cabinet from the Ruling Congress and the Kerala Congress. The older members of the Congress were in favour of joining the administration even from the beginning, while the younger members of the party wanted to wait, while supporting the Government. The present change of attitude is probably a direct outcome of the corruption scandals regarding the acquisition of land for the agricultural University and appointments to the State-owned Travancore-Cochin Chemicals at Udyog Mandal.

Observers here recall that it was with the drawn sword of corruption that the non-Marxist group ousted the Marxists from power. Therefore, Mr Achutha Menon and his colleagues should have been on their guard. And they ask: Is history repeating itself so soon? Or, is it possible that the Ruling Congress is getting set to participate in the administration, quietly getting rid of the Achutha Menon Ministry?

Still, the problem is not easy. A multi-party regime will certainly have its limitations, against the united Marxist party in Kerala, unless it is a stop-gap arrangement like the new government in West Bengal under Mr Ajoy Mukherjee. In any case, the final role of the Ruling Congress will be decided by the Prime Minister whose main interest is to improve her party's hold on Kerala □

TAMIL NADU

Foodgrains output exceeds target

MADRAS.

THE Director of Agriculture, Mr N. Hari Bhasker, has disclosed that the output of foodgrains in the State will reach the record level of 7.2 million tonnes during 1970-71. Of this total output, rice accounts for 5.3 million tonnes, as against 4.5 million

tonnes in the previous year. This impressive increase in production is the result of extension of areas under high-yielding rice varieties to cover 4.5 million acres during the year, as against 1.6 million acres in 1968-69. An equally impressive increase in yield from 1,569 kg per hectare in 1968-69 to 1,974 kg per hectare in the current year has also contributed to the record level of rice production. Incidentally, the plan for 1971-72 envisages further extension of the area under high-yielding rice varieties so as to raise it to 5 million acres.

High-yielding varieties of millets, too, have been increasingly in the picture. The area under such varieties has come to 0.40 million acres in the current year, as against 0.14 million acres in 1968-69. This area increase has partly accounted for the increase in the output of foodgrains other than rice from 1.6 million tonnes in 1968-69 to 1.9 million tonnes in the current year. Incidentally, the plan for 1971-72 envisages further extension of the area under high-yielding millet varieties so as to raise it to 0.7 million acres. The plan also calls for

introduction of high-yielding varieties of pulses on 0.2 million acres.

Between them, rice and other foodgrains, by their peak output of 7.2 million tonnes in the current year, have exceeded the target of 6.7 million tonnes. Given fairly normal seasonal conditions in the coming agricultural year, this trend of rising foodgrains production may be expected to continue. If it does, it can be rightly described as the cumulative result of a series of well-conceived measures in recent years—for drought relief, for sinking new wells and deepening old wells, for energising more and more wells, for introducing high-yielding varieties and for multiple cropping. That this trend must, in any case, continue need hardly be over-emphasised, for the continuing trend of population growth would have to be constantly kept in view. Tamil Nadu's population, according to the 1971 census figures (provisional), has increased by 22 per cent over the last decade—from 33.7 million in 1961 to 41.1 million in the current year. □

REPORT

THE WORLD

From Our Own Correspondents

CANTON FAIR

Our diplomat's secret mission

HONGKONG.

THERE is considerable speculation here on a "secret" trip made last week by the Indian Commissioner, Mr V. Siddharthachary, to Canton. The visit on the occasion of the Canton Trade Fair perhaps would not have evoked that keen interest but for the mystery that the Commission tried to build around the week-long trip to Canton of its head. An official announcement in the Commission's daily bulletin of April 14 said: "H. E. the Commissioner, Shri V. Siddharthachary, would be away for a week from Tuesday, April 14. In his absence Shri Kamalesh Sharma will be Acting Commissioner."

The Commissioner's departure from Hongkong to an undisclosed destination only a few weeks before he was scheduled to leave for New Delhi on transfer made local newspapers take immediate notice of the announcement. Correspondents who approached the Commission for clarification said that the Commission's officials dismissed their queries with the reply "no comment". But a senior official was reported to have told a local English language daily: "I cannot confirm or deny it (Commissioner's trip to Canton). He (the Commissioner) was here till yesterday (April 14)."

According to local newspaper reports, the Commissioner went to Canton as the guest of China. But reliable sources claim that China had not extended an invitation to Mr Siddharthachary in his capacity of a diplomat. It is being pointed out that China is particular about not inviting a diplomat from abroad to visit the Canton

Fair if his country has a diplomatic mission in the Chinese capital.

Informed sources say that Mr Siddharthachary received the invitation in his private capacity through the Chinese General Chamber of Commerce in Hongkong, which usually handles invitations to only Chinese businessmen from Hongkong. Apparently, the Chinese Chamber decided to handle the invitation to Mr Siddharthachary mainly because it is through this organisation and its Chairman, Mr Wang Kuan-cheng, that Mr Siddharthachary and other Commission officials have been negotiating for more than a year to resume Sino-Indian trade. Mr Siddharthachary has been seen at a number of receptions organised by the communist-controlled Chinese Chamber during the past few months. The Chamber's Chairman, Mr Wang, and other leftist banking officials have, on their part, attended parties hosted by Mr Siddharthachary at his official residence.

Diplomatic observers in Hongkong considered as laudable the Chinese decision to allow Mr Siddharthachary to visit the Canton Fair. They see no reason why India should not attempt to resume her trade with China when the United States is making serious efforts to trade with a country which she used to consider as her enemy number 1. The example of Japan is also cited in this connection.

But these diplomats are apparently puzzled over the decision of Mr Siddharthachary to visit the fair in his private capacity. What is not quite clear to them is why New Delhi

should have decided to send its Hongkong-based chief diplomat to Canton instead of the Charge d'Affaires from Peking. The best solution, in their opinion, would have been to send a representative of the Government-owned State Trading Corporation to the Canton Fair. The STC in collaboration with local business interests has already established a base in Hongkong to build up Indian exports to the colony as well as to utilise its entrepot facilities to promote Indian products in other Asian markets.

Assuming that New Delhi would welcome a resumption of trade with China, it is possible that it thought it better to send a diplomat to Canton rather than a STC official though he might be well-versed in all aspects of foreign trade. Politics is invariably involved in trading with China and a diplomat is better equipped to appreciate the implications than one who may be an expert on trade.

It could also be that much more is being read in Mr Siddharthachary's visit than what is really involved. Mr Siddharthachary could as well have gone to the Canton Fair to make an on-the-spot assessment of the Chinese progress in various sectors of industry and the competition that the Chinese goods could offer to India in South-East Asian markets where she is keen to promote the export of her goods. The semi-annual trade fairs held in Canton during autumn and spring are considered to be China's economic show windows where most of her international trade agreements are negotiated. These fairs attended by businessmen have been gaining increasing popularity lately with the growing Japanese and other foreign participation. Even some Hongkong-based American businessmen have been trying in recent weeks to find admission to the fair.

The Canton Fair is thus an excellent forum to assess the Chinese economic strength as well as the possible direction and pattern of her trade with other countries. Whatever her political differences with China, India must keep herself continuously informed of the economic progress of that country, and Mr Siddharthachary might have gone to Canton to further this worthwhile cause. □

BURMA

Japan mounts an economic thrust

RANGOON.

THE visit of three successive Japanese missions to Rangoon since the beginning of the year indicates that Japan and Burma are about to enter into a new and more active phase of economic and technical co-operation. In January came a mission of Japanese engineers to advise on construction of quake-resistant buildings. In February came a Japanese Economic Mission and a Japanese Petroleum Trade Mission for talks with Burmese authorities on matters relating to Burma's economic plans, finance and banking, industry, mining and trade.

Burma's economic relations with Japan are of quite recent origin compared to those with India and China which date back to ancient times. But the Second World War and its aftermath have created conditions which exert on Burma a sort of gravitational pull towards Japan's economic orbit. The Japanese invasion did incalculable harm to Burma, and when the war ended in 1945, both Burma and Japan lay prostrate, the first from economic ruin and the latter from military defeat. Burma then found herself in desperate need of foreign aid for urgent rehabilitation of her shattered economy, while Japan desired a speedy normalisation of relations with Burma and other former Asian enemies in order to be able to resume her trade with them. In such a situation, it was not surprising that Burma and Japan came to terms quickly and concluded a peace treaty and a reparations agreement in 1953. Under the agreement, Japan provided Burma with US\$200 million (Rs 150 crores) reparations and a US\$50 million (Rs 37.5 crores) loan.

The reparations and the loan were of immense value to Burma, but they had a profound effect on the pattern of Burma's import trade. Although long integrated with the sterling area, the trade began to get oriented towards Japan. The shift in Japan's favour was further encouraged by Burma's abrogation in 1953 of the Ottawa Agreement which accorded preferential tariffs to countries of the British Commonwealth. The immediate result was the replacement of India by Japan as the foremost trading partner of Burma. Thus, while India provided as much as 55 per cent of Burma's total imports before the war, and Japan only 8 per cent, by 1959 India's share of the trade had dropped to 10.8 per cent while that of Japan had risen to 20.3 per cent (the highest among Burma's suppliers). Japan was still leading in 1968-69 accounting for over 22 per cent of Burma's total imports, while India supplied only 9 and the UK only 11 per cent.

In 1963, Japan granted to Burma additional reparations amounting to US \$140 million (Rs 105 crores) and an additional loan of US \$30 million (Rs 22.5 crores) under a Burma-Japan Economic and Technical Co-operation Agreement. These reparations are to be drawn within 12 years from 1963, and the loan within 6 years from 1963. The two together are sure to help maintain Japan's position as Burma's principal supplier.

Evidence of increasing Japanese presence in Burmese economy can already be seen, among others, in the large number of Japanese motor cars on Burma's roads and Japanese craft in Burma's rivers. But by far the most conspicuous proof in this regard are the 84,000 kw hydro-electric plant at Lawpita waterfalls in the Kayah State in north-east Burma, and the newly completed 55,000-ton-a-year urea fertiliser plant in Central Burma, both of which were built with Japanese assistance. These plants as well as other Japanese-made machinery and equipment in Burma will

inevitably entail Burma's dependence on Japan for needed spare parts and accessories for some time to come.

Recent events show that Burma is seeking more aid from her former enemy, who, having reached the pinnacle of economic achievement since the end of the war, seems capable of giving such aid. General Ne Win visited Japan in May 1970 and obtained from the Japanese Prime Minister, Mr Eisaku Sato, a pledge that Japan would extend to Burma financial and technological assistance for the development of oil resources in the Bay of Bengal, off Burma's western coast. The three Japanese missions which have visited Rangoon since January are an outcome of this pledge, but judging from their composition and the wide variety of subjects they discussed with the Burmese authorities, it would appear that the new phase of Burma-Japan co-operation will not be confined to maritime oil exploration only but extend to several other fields of economic activity. □

CONGRESS OF THE CPSU

A quiet revolution in economic philosophy

By Dev Murarka

Moscow.

IT has been a Congress of the consolidators. Perhaps no other party Congress has been so quiet and business like as the one which has just finished. There are sound reasons why the Soviet leaders decided to hold it that way and almost got away with creating the impression that no radical changes are in the offing. So much so, that even the Politburo remained unchanged except for promotion of four of the candidate members to full membership, thus enlarging the most powerful body in the country from 11 members to 15.

Undoubtedly, the Congress succeeded in underlining the greater degree of authority and command over the party's affairs which the General Secretary, Leonid Brezhnev, has now acquired. Even the promotions to the Politburo are seen as strengthening the balance in favour of Brezhnev rather than anything else. But, this should not mislead anyone into thinking that Brezhnev is indulging into a little personality cult of his own. Rather, it is a reflection of the confidence shown in him by the collective leadership which has felt for some time that it would be better to project one identifiable personality rather than a group for internal political reasons.

The fact that none of the top leaders were retired from the Politburo or even from the influential Party Secretariat also suggests that balance of forces at the top political level is so even and delicate that even one change may necessitate a number of other changes in the Politburo. It also suggests that Brezhnev was either unable or unwilling to bring about so many changes at this stage and that his power, though enhanced by common consent, was still kept fairly in check. The net result was that the group of 25 persons, who between them control the destiny of the Soviet Union, remains unchanged. Some have been promoted but no newcomer was taken in. These 25 persons, to make it clear, are the 15 members of the Politburo, the 6 candidate members of the Politburo and 4 of the 10 Secretaries of the Central Committee who are neither full or candidate members of the Politburo. It is, by any standards, a remarkable feat of political stability at the top. But it also suggests that Brezhnev's power derives from the acquiescence of this group rather than from any domination over them. Nothing that has happened at the Congress, therefore, should lead one astray into thinking that Brezhnev has emerged as a law unto himself. In reality, despite appearances to the contrary, he still is one among the equals, perhaps just a shade more equal than others but no more than that.

The absence of change at the Congress, however, does not guarantee that there may not be changes after an interval. Indeed, the expansion of the Politburo as well as the Central Committee membership, from 195 to 241, indicates that ground is being prepared to infuse some new blood into the circle of top elite in not so

distant a future. What form it will take and who will be the personalities involved, it is futile to speculate at this stage. Not because basis cannot be found for such speculation but because in present conditions in the Soviet Union change of personalities may not denote a change in policies. In this sense, too, the situation after the 24th Congress is radically different than after the last Congress. At the 23rd Party Congress the Soviet leaders were still groping towards finding correct policies to suit their outlook, they were a shade lacking in confidence. On the contrary, despite all the troubles they have faced in the intervening five years, they exuded confidence at the 24th Congress not only because they knew where they were going but also because they had a feeling that they were also arriving at their destination.

It will take some time for the outside world, which is rather inclined to be too critical and cynical about the Soviet reality, to grasp this. But there is overwhelming evidence produced by the Congress to confirm that within the framework of their own thinking the Soviet leaders have indeed a great many reasons to be satisfied with the progress made so far and by the planned progress for the future. Theirs, on the whole, is essentially a conservative, centrist position from which they have been able to contain what they considered to be the anarchy of post-de-Stalinisation period as well to beat off the determined attempts of the neo-Stalinist revivalists to go back to the old ways regardless of consequences. The 24th Congress was a convincing proof that the policy-makers have rejected either of the alternatives and finally put an end to any fears that there could be a reversion to the past. On this, too, it has spelled out the policy in a firmer way than at the last Congress. It involves, of course, the price that ideologically, at least, the policy will remain frozen at an artificial level of uneasy compromise between the orthodox Stalinist sentiments and very conservative liberalism, thus discouraging any real flowering of the creative spirits in the arts. But it will have the merit of laying the ghost of Stalinist revival for once and all.

But it is not in the field of ideology, or even foreign policy, that the enormous significance of the Congress lies. It is in the realm of economics that the Congress must be considered as laying the foundations of a quiet revolution. It is a great pity, indeed, that the attention which matters of foreign policy and ideology attracted from the commentators, have pushed into background the remarkable contents of Brezhnev's policy document dealing with economic problems of the USSR.

On going through it and combining it with the speech by Prime Minister Kosygin on the five-year plan directives, one is impressed by one thing above all. A significant change in Soviet approach to economic problems is taking place and breaking from the established mould. It is not so

much in what the Soviet leaders are doing actually but in the way they have shown a new perception of the economic realities that the importance lies. Some indication of this was already provided when the draft plan directives were published in February and showed that for the first time in the history of Soviet economic planning consumer goods were to have a priority over heavy industry. Outside observers tended to dismiss this as a slight of hand which would change nothing, would probably fail to achieve the target and, in any case, the priority was with a very small margin. All these criticisms may or may not be valid. It is certainly true that the planned increase in consumer goods is 44-48 per cent for the next five years as against 41-45 per cent for heavy industry. But to concentrate on the simple figures is to overlook the historic significance of this break from the past dogma. The full effect of this will be felt not in the current five-year plan but in the plans to come.

This departure must be viewed in its historic context. In his report to the Congress Mr Brezhnev again and again underlined the significance of this move, albeit indirectly sometimes, but often bluntly and directly. In the past, the heavy industry was invariably given priority because it was argued that resources were not adequate for everything and progress depended upon the development of heavy industry. While there was something in this argument during the Stalin period, by the later period of Khrushchev it had become fallacious for the simple reason that Soviet resources had grown enough to allow for all-round expansion of the economy. This was done but with hesitation and with the heavy industry still getting priority. Even the five-year plan approved by the 23rd Party Congress did not break from this tradition which had become almost sacred. But it has at last penetrated the minds of the Soviet policy makers that this continued unbalanced concentration upon heavy industry was holding up rather than helping the progress of the economy.

Mr Brezhnev has now explained, and even if it is not the whole truth it is near enough to be dramatic: "In the early stages of building socialism, it will be recalled, we were compelled to concentrate on the top priorities, on which the very existence of the young Soviet State depended. Now the situation is changing. Not only do we wish to—for we have always wished it—but we can and must deal simultaneously with a broader set of problems.

"While securing resources for continued economic growth, while technically re-equipping production, and investing enormously in science and education, we must at the same time concentrate more and more energy and means on tasks relating to the improvement of the Soviet people's well-being. While breaking through in one sector or another, be it ever

so important, we can no longer afford any drawn-out lag in any of the others."

The statement above sweeps away, in a few sentences, a strongly entrenched economic ideology which has done so much harm to the Soviet economy in recent years. Even then, the orthodox sentiment is so strong still that Mr Brezhnev had to demolish it further while appearing to placate it. Thus, a few minutes later, he was telling the Congress that the new modification of economic priorities did not mean that the concern for heavy industry would slacken. He reiterated its importance in the context of defence industry. But then he lobbed a minor bomb into the lobby of defence industry by disclosing that, "today, as much as 42 per cent of its output is used for civilian purposes". Not only that, he went on to argue that a good deal of increased consumer goods production will have to come from defence industry, too, because it already has facilities for such production. In other words, he was telling the advocates of heavy industry that heavy and defence industries are not watertight compartments and they also must contribute to civilian production, that the defence industries in any case had idle capacity which is being used for civilian purposes and should be used so even to a greater extent in the future.

Even more devastatingly, Mr Brezhnev attacked the established psychology of economic priorities and exposed perhaps one of the root causes why the Soviet economy creates such a poor impression despite its inherent strength and why the people have to suffer the humiliation of deprivation of small necessities. He said: "We have many years of heroic history behind us, comrades, when millions of Communists and non-Party people consciously accepted privations and hardships, were content with the bare essentials and denied themselves the right to demand any special amenities. This could not but reflect on their attitude to the production of consumer goods, to their quality and range. But that which was explicable and natural in the past, when other tasks, other undertakings stood in the forefront, is unacceptable in the present conditions. And if some comrades tend to overlook this, the Party is entitled to regard their attitude as stemming either from a failure to understand the substance of its policy, oriented on a steady rise of the living standard, or as an attempt to vindicate their own inactivity. The Central Committee considers it necessary to raise this issue incisively and frankly.

"We still have administrators, and this not only locally but in the centre as well, who manage to 'coexist peacefully' with shortcomings, who have somehow reconciled themselves to the low quality of some consumer goods, and who are unfolding consumer production with unpardonable slowness. Some go so far as to cut back or even stop producing commodities that, though inexpensive, are essential for the population, on the pretext of replacing outdated goods with new ones. That is how shortages arise from time to time of goods usually known as 'trifles'. But there is no such thing as trifles when it comes to items in daily demand."

At a later stage he went on to argue that in the present context better quality

also means more for the economy and quantity by itself is not enough. Altogether, therefore, Brezhnev's report revealed something which had been lacking so far in Soviet policy pronouncements. It revealed a new perception of the needs of the economy as well as the people. It can be undoubtedly argued that it is all very well to be perceptive without doing, or being able to do, anything about putting this perception to practice. And it might be a justified criticism of the new Five-Year Plan, that it does not go far enough to put these perceptions into practice.

To adopt such an approach, however, will be to miss the essential point. It is that the Soviet leaders and planners have now taken an enormous step towards recognising the reality of the present economy and have arrived at some very acute conclusions. It may not be possible for them, in fact it is virtually impossible, to change either the system or the conditions overnight. But that they have taken a step

in the right direction, at this time, should not be any doubt. The present plan, for all interests and purposes, may lay the foundations for carrying out the new perceptions into practice. It will also give time for the new ideas to take root at a level where they matter most, among the planners, managers, party official and bureaucrats. Then and only then the ground will be ripe for more adventurous planning and ideas to take shape. But for this very reason this interim period is not to be despised. On the contrary, it should be valued highly and Mr Brezhnev's substantial contribution in bringing this about should be recognised. This is also the reason, why the 24th Congress can be aptly described as a Congress of the consolidators. Despite its appearance of dullness it has at least opened the way towards more fruitful thinking on problems facing this country, at least where the economy is concerned. That is no mean achievement in itself, no matter howsoever critically one approaches them. □

A generation condemned... because we don't care enough?

Over 60% of India's children suffer from protein malnutrition. These are not just hungry children we're talking about. Here's a generation that may be growing up both physically and mentally retarded.

Why?

Protein is the element in food that builds both body and mind. If children between 6 months and 5 years do not get enough protein they become physically stunted. Worse, their mental development may be affected. And protein later on cannot repair this damage. It lasts a lifetime.

What it forebodes

*Economic ills - Adults below par, prone to illness, mean low productivity, wasted manhours.

*Population problems - Malnutrition is the cause of more infant deaths than all other causes put together. High infant mortality encourages larger families.

*Social unrest - For millions of Indians caught in the vicious cycle of poverty and poor performance - often caused by malnutrition - violence seems the only answer.

Help.

Malnutrition is a hidden famine... and so more dangerous. We must fight it on all fronts.

DEVELOPMENT PLANNERS must recognise that nutrition is an important pre-requisite to socio-economic development.

PRIVATE INDUSTRY must fulfil its social responsibility - low-cost nutritious foods are urgently needed.

GOVERNMENT, BOTH CENTRAL AND LOCAL, must

- *initiate developmental research
- *rationalise distribution of scarce protein foods
- *encourage the food industry with rational laws and licensing policies
- *organise mass-scale relief programmes
- *extend fortification of basic foods
- *use mass communication for nutrition education

Inserted in the public interest by the Protein Foods Association of India

BUSINESS REPORT

From Our Own Correspondents

POWER SUPPLY

Avoidable deficits and high costs

NEW DELHI.

THE Power Economy Committee, headed by Mr K. L. Vij, in its report to the Government has highlighted the need for rationalising the operations of the power supply system in all its facets—generation, transmission and distribution—and the adoption of modern and scientific techniques of management in order to put the limited capital resources available for power development to the best use and derive the maximum benefits without increasing the running costs. The committee has identified a large number of areas where substantial savings can be effected and indicated the areas where there will be scope for saving in future.

The report refers to a study of the integrated operations of four systems in the southern region which showed that about Rs 8.27 crores could have been saved in fuel charges alone in 1968-69 if principles of economic generation scheduling had been applied. It cites the example of Maharashtra which lost industrial production to the extent of Rs 100 crores due to power shortage extending over six months in 1969. This could have been avoided had there been adequate transmission lines between that State and Mysore and Madhya Pradesh where surplus power is available. Similarly the 180 mw of surplus power available at Satpura could have been utilised to meet the acute power shortage in Punjab, Haryana and UP if adequate transmission lines existed.

These underscore the vital importance of inter-connections between different power systems and the need for larger allocation of resources for transmission and distribution. Hitherto generation schemes have claimed a sizable portion of the investment in power development. The provision for transmission and distribution in the Fourth Plan is Rs 721 crores against Rs 1,255 crores for power generation and Rs 444 crores for rural electrification. The committee has, therefore, urged that the outlay on transmission and distribution in the Fourth Plan and subsequent Plans should be considerably increased. Pointing out that in a developing economy like India's some States will have surplus generating capacity and the others much less than what they require, the committee says that this situation can be remedied only by providing transmission lines between States of adequate capacities for the transfer of the surplus power.

It will be then easy to conceive of power transfer between regions of the order of 500 to 700 mw over distances up to 1,000 km. This will lead to economic utilisation of resources. The transmission lines have to be planned on long-term basis, say for a period of 15 to 20 years. There is power shortage today in many parts of the country. According to the committee, this is likely to continue for

the next few years and the available generating capacity would not be able to meet the anticipated load demand. It is, therefore, important to derive optimum benefits from the available generating capacity.

Substantial economies in the cost of power generation can also be achieved by developing well-integrated regional power grids leading to the evolution of a national power grid. There is an urgent need to devise measures which would promote development of such grids. As a first step, the committee has proposed that a phased perspective plan of development of power systems should be formulated. In its view, maximum economies in the cost of power production can also be achieved through planning which looks far beyond the needs and requirements of small individual systems. The planning should, therefore, be done on a regional basis and the power projects should be chosen on regional considerations and on the basis of minimum cost.

The committee has come to the conclusion that under the existing conditions in the country hydel schemes constitute the most economic means of power generation. Apart from the economy inherent in them, hydel schemes designed for complementary peaking with thermal or nuclear stations enable better utilisation of available generating capacity and energy potential. The estimated cost of power from nuclear stations based on heavy water reactor technology shows that atomic power would be competitive with the prevailing production cost of thermal stations located far away from the collieries. The committee has, therefore, suggested that in order to produce cheaper electricity the bulk of new generating capacity to be added during the Fifth and Sixth Plans should be derived from hydro sources. The balance of new generating capacity should be from super steam power stations employing the largest possible unit sizes and located near coal washeries or coal mines. Nuclear power generation would be economical in areas with limited hydro resources and which are far removed from collieries.

Emphasising that rural electrification is one of the most basic needs for improving the standard of living of 80 per cent of India's population which lives in villages, the report observes that an important reason for the low productivity of farming in the country is that energy and motive power on a large scale have not been applied to agriculture as in the developed countries. Electricity has now become a necessity rather than an amenity even in rural areas. The committee has said that rural electrification can spread rapidly if it takes the shape of a people's movement. Labour and transport form about 15 to 20 per cent of the total cost of the lines. If the villagers can be enthused to supply labour and transport

free of cost, enormous savings could be effected which would result in the electrification of more villages with the same funds. This experiment has been already tried successfully in some States. Another advantage of such a method is that the villagers will feel that these are the works created by them and are likely to ensure that no damage is caused.

The committee says that the co-operative use of tubewells should be encouraged. This would help in pooling of resources. The use of tubewells and selling of tubewell water would increase the load factor and improve the economics of rural electrification. Similarly, co-operative use of electric appliances such as threshing machines, drying facilities for fruits, cold storage, etc., will ensure profitable use of power.

The report also stresses that the easiest and the quickest way for rural development will be to integrate the rural electrification programmes with the agricultural and rural industrial development schemes. It has recommended that suitable incentives should be provided to farmers to go in for the use of electric power. For this purpose service stations should be set up with mobile squads which should take up certain works like internal wiring and maintenance on reasonable charges. The State governments should organise rural technical centres and thus utilise unemployed technical personnel for this purpose. They should be given necessary incentives to offer their services to the farmers. The State electricity boards should also set up such centres or assist in their establishment.

The committee considers that some changes in the institutional arrangements are necessary to ensure power development on a rational and co-ordinated basis throughout the country. An important recommendation made by it in this connection is that the Central Electricity Authority should be reconstituted on a full-time basis and entrusted with the preparation of a national perspective plan for power development. In drawing up such a plan, it should seek the help of regional and State electricity boards which are familiar with the conditions prevailing in their respective areas. The committee has also recommended that the agency for the construction of power projects will have to be decided on the basis of the nature of the scheme, its location and the type of financing. In the committee's view the institution of control boards which has already been adopted in some States for implementing power projects, may be followed in the case of projects that are taken up on regional considerations. Further, it has suggested that regional electricity boards should concern themselves primarily with ensuring maximum economy by integrated operation of the constituent power systems in their regions. The position of the regional electricity boards vis-a-vis the General Electricity Authority should be given statutory recognition.

Expressing concern over the large shortfalls in generating capacity and trans-

mission facilities in the past, the committee says that if this trend continues there is likelihood of a serious power shortage occurring in the Fifth and Sixth Plans as well. Therefore, it has strongly urged concerted action on a wide front for making up the lost ground and preventing shortfalls in future. □

PETROLEUM PRODUCTS

Pending hike in crude price worries MRL

MADRAS.

THE fourth annual report of Madras Refineries Limited covered the 15-month period ended June 30, 1970, and the first year of its commercial operations. With a turnover of Rs 26.93 crores during the period under review, the company sustained a net loss of Rs 3.67 crores after providing Rs 3.29 crores for depreciation and Rs 2.32 crores for interest on loans. At the company's fourth annual general meeting on December 17, the Chairman, Mr M. Rama Brahman, disclosed that subsequent to the presentation of the audited accounts to the Board the Government of India decided the basis for pricing lubricating oil base stocks. The Government's decision resulted in an additional income of Rs 1.12 crore during the operating year 1969-70, thereby bringing down the year's loss to Rs 2.55 crores. This reduced deficit too was wiped out by profitable working during the five-month period July-November 1970. The company's operations have continued to be profitable since November 1970 in spite of the heavy freight charges on account of crude imports.

Notwithstanding the present trend of profitable working, the ultimate level of profit in the current financial year, that is July 1970 to June 1971, is subject to uncertainty because of several factors. The first is the inadequacy of port facilities to handle large tankers for transport of crude and the consequent heavy incidence of freight rates. The second is the delay in the commencement of operations of the Madras Fertiliser plant and the consequent uncertain offtake of naphtha on a steady basis till the plant reaches stabilised production. The third factor is represented by the two price increases notified by the suppliers of crude in recent months, the first increase effective from November 17, 1970, from \$1.35 per barrel to \$1.41 per barrel and the latest further increase effective from February 1971. Both price increases are still under negotiation with the Government of India. If both the price increases by any chance are accepted by the Government they will eat into the profits of Madras Refineries during its current financial year.

It would be unrealistic as of now to work out the ultimate profit in the current year, for it is not clear what the increased crude prices will finally be and what the correspondingly increased product prices will be. Incidentally, an identical point has also been made by Mr C. R. Pattabhiraman, Chairman, Cochin Refineries, at a recent press conference in New Delhi. What is a safe guess as of now is that a possible crude price increase in the

Industrial Relations Commissions

MR Naval H. Tata, President, Employers' Federation of India, says that the Government should give the highest priority to the setting up of the proposed Industrial Relations Commissions and expedite the progress towards the development of harmonious relations in all industries. The establishment of IRCs will have a highly beneficial effect on labour-management relations in the country. As regards the national wage policy, Mr Tata says that ceilings on wealth and income could only be considered as a part of the integrated national policy embracing all sectors of the economy including urban and rural, industrial and non-industrial as also agricultural sectors. "Merely tinkering with problems of any one particular sector in isolation to the exclusion of others would create imbalances and result in far greater disparities of income than at present," says Mr Tata.

Cement price fixation

Mr R. D. Shah, President, Cement Manufacturers' Association, Bombay, says that the major problem facing the cement industry is the inadequate price allowed for its products. Although the industry is not averse to the Government's policy of holding the price line, it is necessary that the Government should ensure suitable compensation whenever there is a steep rise in manufacturing costs as a result of Governmental actions such as increased freight on raw materials, enhancement of royalties, revision of electricity tariffs, etc. Over such matters the manufacturers have no control and as such the pricing policy of the Government should ensure a remunerative rate to the industry. Since 1966, the costs have increased by over Rs 20 per tonne and the price increases granted by the Government are grossly inadequate to cover this.

Bank credit for pump-sets

Mr A. C. Gupta, President, Indian Pump Manufacturers' Association, says that some of the nationalised banks are putting "rather harsh and unreasonable conditions" while financing suppliers of agricultural pump-sets. The guarantee for good quality, reasonable price and assured after-sales service is a normal feature of any transaction. But the supplier cannot be held responsible for the non-payment to the bank of any of the instalments of the loan by the farmer-borrower. But some of the nationalised banks insist on having a guarantee from the supplier to the effect that he would take back the pump and repay the entire dues in case an agriculturist-borrower defaults any repayment of loan instalments. Some banks are also insisting on ISI certification mark for approving a particular make of pumps. But quality, according to Mr Gupta, is something which is part and parcel of the culture of an organisation which cannot be ensured by ISI certification mark. As facts stand, none of the reputed manufacturers of pump-sets have opted

BUSINESS OPINION

for ISI certification marks which means that their pumps will not qualify for approval by banks.

Wire rope exports

The Indian Wire Rope Manufacturers Association, Bombay, says that the drastic cut in the duty drawback on exports of steel wire ropes has seriously affected the wire rope industry. The Government's decision to cut the duty drawback on exports from Rs 453 to Rs 131.25 per tonne in respect of ungalvanised wire ropes and Rs 157 per tonne in respect of galvanised wire ropes with effect from February 20 has come to the industry's notice only recently. All the commitments of the industry for exports till April 15 were based on the conditions prevailing before February 20. Under such circumstances, the industry would have to face a heavy financial burden. The Association says that the Government should allow the rates of duty drawback prevailing before February 20 for all export commitments till April 15.

Power supply for jute industry

Indian Jute Mills Association, Calcutta, says that the failure of the electricity generating and distributing agencies to ensure uninterrupted supply of power to the jute industry has hampered the industry's efforts to maximise production. The Barrackpore-Titagarh and the Hooghly-Rishra areas representing some 43 per cent of the industry's total production are subject to power cuts by the Calcutta Electricity Supply Corporation. The resultant loss of output has been considerable. Between January 1970 and April 1971 restrictions in the supply of electricity to mills accounted for a production loss of about 25,000 tonnes valued at approximately Rs 7.3 crores—a little over 2 per cent of the industry's total output.

Saurashtra mills

Mr Mahendra Shantilal Shah, President, Saurashtra Millowners' Association, says that the textile units in Saurashtra, excepting a few prosperous units which have vast financial resources and modern machinery, are passing through a deep crisis. The financial resources of a majority of units are not even sufficient to provide the working capital. It is, therefore, necessary that ways and means should be found for improving the capacity of Saurashtra mills with the minimum capital expenditure. This can be done, according to Mr Shah, by installing second-hand machinery of later techniques which is in fairly good condition and by suitable modifications in the existing machinery with a view to improving productivity. But this, Mr Shah says, is only a temporary expedient to provide a valuable breathing time for the long-range programme of mill modernisation.

absence of a corresponding products price increase would drastically reduce the 1970-71 profit of Madras Refineries. The crude throughput of Madras Refineries in 1970-71 is 2.5 million tonnes (one tonne is the equivalent of 7.4 barrels) □

ENGINEERING INDUSTRY

Progress halted by steel shortage

CALCUTTA.

IN keeping with the new constructive approach to offer all possible co-operation to the Government in the solution of the country's urgent and pressing problems like unemployment, inflation and industrial revival, Mr Sanjoy Sen, Chairman of the Indian Engineering Association, has assured the engineering industry's fullest support for all measures to accelerate economic growth. In return, he expects the Government to show a more realistic and understanding attitude towards industry, and help in the solution of the industry's current difficulties. These difficulties are many, but the main one, as far as the engineering industry is concerned, is that of inadequate raw materials, especially steel of mild as well as special grades.

Many units in the industry, it has been authoritatively stated, are working to about half their capacity mainly due to the short supply of raw materials like steel, non-ferrous metals and imported components. Steel shortage was partly the reason for Braithwaite's closure (the management of the company has been subsequently taken over by the Government). According to IEA estimates, the gap between steel supply and demand in 1970-71 was half a million tonnes. This gap is arrived at after taking the total demand at 6 million tonnes of finished steel, and deducting from this the total supply of 5.5 million tonnes of finished steel consisting of 5.1 million tonnes of domestic production and 400,000 tonnes of imports.

According to IEA estimates also, steel demand by the engineering industry is increasing by 12 to 15 per cent annually, excluding the demand on account of exports, which is placed at another 3 to 5 per cent, and this necessarily means that unless steel supply is adequately stepped up, shortage will last for a long time. Finished steel demand by the economy as a whole is expected to go up to 6.75 million tonnes in 1971-72, to 7.8 million tonnes in 1972-73 and to 9.3 million tonnes in 1973-74. In terms of ingots, these increased demands would call for a production of 9 million tonnes in 1970-71, 10.4 million tonnes in 1972-73 and 12.4 million tonnes in 1973-74. It would be clearly impossible for the domestic industry to match this level of demand, particularly when it is unable to utilise more than 70 per cent of rated capacity. Individually, plants like Durgapur and Rourkela are worse off.

The IEA naturally suggests freer imports, for the next three to four years at least. It would also like the electricity furnace industry to be encouraged to produce more by banning scrap exports to the extent the domestic demand would call for. It has also been emphasised that should the

tempo of industrial production accelerate further, the demand for steel may go up even higher than the projections already referred to, and the Government must bear this possibility in mind while taking steps to increase steel supply.

Alloy and tool steels are getting shorter and shorter in supply. The estimates of actual requirements vary widely, but the IEA estimate is one of half a million tonnes per year. The local producers, it is said, are deliberately under-estimating the demand. This may or may not be true, but there is definitely a case for increasing production in the State-owned Durgapur alloy steel plant. This plant is also not supplying stainless steel according to consumers' specifications, but forcing on them the material it produces. This material being unusable is disposed of in the open market at below the prices bought. However, a happy feature from the consumer's point of view is that stainless steel brought against import entitlements are available in the open market at about the same price. The IEA feels that as in the case of steel, there should be a centralised machinery to co-ordinate consumers' indents with the production planning by various units, and that there should be a greater standardisation of the categories produced in line with the market pattern of demand.

The problem of supply boils down essentially to one of increasing domestic production. Apart from the Government-owned alloy steels plant at Durgapur, units in the private sector, Guest Keen Williams, and Mahindra Ugine, should be allowed to expand their capacity. Guest Keen Williams, in particular, has scope for raising its capacity (which now stands at 65,000 tonnes annually after recent expansions) through the addition of balancing equipment like additional cogging and rolling facilities. The IEA recommendations for increasing alloy and special steels in the short term support this view. □

AVIATION

Air-India's jumbo jet is here

BOMBAY.

THE jumbo jet age has arrived for India. On April 18, Air-India's first 346-passenger Boeing 747 flew into the Santacruz airport to a tremendous reception from thousands of people. The Chairman of Air-India, Mr J. R. D. Tata, called it a proud day in the history of commercial aviation in this country which opened some 40 years ago. Three more jumbos are due to be received by Air-India in the course of the next year or so.

While there is justifiable excitement over our acquiring the high-capacity planes, there is also the question as to how profitable it will be for Air-India, at least initially, to operate the jumbos. The entry of jumbos in aviation has been at a time when the aviation industry has experienced a severe financial setback. What has been worrying many in the industry is how to fill in the tremendously increased capacity with 116 jumbos already delivered to 24 airlines and another 88 on order.

Mr Tata hopes that air travel will soon resume its upward curve with American recession in this sector showing signs of lifting. Air-India itself has introduced reduced fares for the 747 from the USA to India, consisting of a discount of as much as 44 per cent in the form of excursion fares. Similar fares will apply from London to India, and discounted fares have also been introduced on the Tokyo route which is the growth route for Air-India. The 747s would also help Air-India to increase frequencies on 707 routes to daily to Tokyo, increase services to Nairobi, Singapore and Mauritius and extend the operations in Africa. According to Mr S. K. Kooka, Commercial Director, Air-India is also planning the establishment of a non-IATA charter company.

These plans do underline that Air-India knows what it has bargained for in purchasing the 747s. It could not but be ready to tackle all these problems knowing that it would be spending as many as Rs 90 crores on the four jumbos. But its plans to boost tourism and induce more people to India could well run into a bottleneck if enough hotel accommodation and the capacity of Indian Airlines are not built fast enough to keep pace with the increased traffic. Not only that. The Customs procedures at our international airports will have to be streamlined. Oddly enough on April 17, a day prior to the landing of the jumbo, a passenger from London complained that it took him three hours before he could cross the customs barrier, and the reason was that two planes had arrived within minutes of each other at the Santacruz airport. But the combined total of passengers that they had brought did not reach the figure of 346 which one single jumbo of Air-India can carry. □

TRANSPORT

New possibilities for co-operation with India

JAKARTA.

THE untying of aid which Indonesia receives will open new possibilities for strengthening of Indonesia's economic relations with India. So far, the US, West Germany, the Netherlands and Japan have agreed to untie their project aid, although subject to certain conditions and/or mutual agreement. Generally the untying of the aid is allowed in cases where the donor country cannot supply items tailored to Indonesia's needs. Most interesting however is the stipulation by the US Government that the US aid money can only be spent in other developing countries.

The Indian Government has been prompt to sense the new opportunities and invited three economic journalists and a mission consisting of senior officials of road transportation, railways and the Ministry of Communications to visit the country. Both missions spent about two weeks in India, visiting industrial plants and other places, to get an idea of what India can offer to Indonesia.

Transportation and communications are among the sectors on which Indonesia's rehabilitation and development programme is being focused. The other sectors in-

clude irrigation and infrastructure in general. The Government hopes that with the rehabilitation of the infrastructure, private investment will grow and the economy will gain momentum. The two years of implementation of the Five-Year Development Plan, which started in April 1969, have confirmed these expectations.

Because of the wide gap in technology between Indonesia and the advanced nations, often Indonesia has difficulty in buying equipment of specifications suitable for her current needs. The high degree of automation of the equipment produced by the industrialised nations requires skills which often are not available in Indonesia for handling such equipment. Also such equipment is labour-saving, whereas one of the main objectives of the development programme is to tackle the problem of unemployment. With a 2.5 per cent annual population increase this problem becomes more serious each year.

Since many of these problems are also being faced by India, the design of Indian equipment and machineries can be expected to suit better Indonesia's requirements. But, so far the problem of financing has been a serious hurdle in the way of larger trade developing between the two countries. Indonesia lacks foreign exchange and has been receiving an ever-increasing amount of aid for the past five years. On the other hand, India is also facing balance of payment problems of her own and is not in a position to extend credits. The only major sale by Indian industry to Indonesia which constitutes a broadening of the range of trade, has been that of a few hundred Tata buses.

It is true that the Indonesian market is very brand-conscious and it will take a major effort before Indian goods can gain a prominent place in Indonesia's import pattern. But the introduction to Indonesia's railways and in road rehabilitation programme of Indian goods will mean a considerable break which India badly needs to establish her image here. And it can be expected that more Indonesian missions will follow to exploit the opportunities which untied aid can offer to broaden the co-operation between the two nations.

The pattern works both ways, and the Indonesian authorities are very much aware of this. Just recently the Deputy Chief of the Planning Bureau, Dr Emil Salim, speaking before a panel of businessmen urged the Indonesian contractors, consultants etc to keep an eye on what other developing nations receive in aid. This, he said, is necessary in order to be kept informed of any tenders in which Indonesian contractors can participate. □

NEWSPRINT

Tapping Himalayan coniferous wealth

SIMLA.

THE first major attempt to tap the huge coniferous forest resources of the Himalayas got off the ground last week when the Ballarpur Paper and Straw Board Mills entered into a contract with

the Himachal Pradesh Government to set up the second newsprint mill of the country. Under the agreement which was signed on April 14 in Simla the State Government undertook to supply 57 lakh cubic feet of fir and spruce for pulp making. The felling of this wood, debarking the logs, floating the logs and its truck transportation will be the responsibility of the company. According to present plans, the newsprint mill will go into production in another three years with an initial production capacity of 85,000 tonnes annually. This will be further increased to 1.23 lakh tonnes as the mill would gain experience in the utilisation of hard woods. This project of utilising the Himalayan hard wood for newsprint making was originally proposed to be set up in collaboration with a Canadian firm but has now been abandoned in preference to complete indigenous expertise and know-how.

The new mill will also have (i) refiner ground wood pulping systems; (ii) a small high yield chemical pulp mill; and (iii) a high speed paper machine with a twin wire formation system. In order to meet the requirements of newsprint in sheets and glazed newsprint, the mill will install a super-calender and a duplex sheet cutter. Tentatively, the initial cost of the project has been estimated at about Rs 30 crores, of which the foreign exchange components alone would be approximately Rs 20 crores.

As the plant goes into production it is expected to reduce the present newsprint shortage by nearly half initially and meet 75 per cent of the shortage by the time it completes its second phase of expansion. At present out of the total consumption of 1.87 lakh tonnes of newsprint, the country imports as much as 1.55 lakh tonnes. With the expansion plans at the Nepa mill progressing according to schedule, and the Himachal Pradesh plant in production the shortage in newsprint is expected to be brought under control by the second half of this decade. □

OILSEEDS

Tackling the fat shortage

BOMBAY.

THE shortage of fat in the country seems to have developed into a long-term phenomenon. During the last five years the per capita consumption has been reduced from 3.2 kg to 2.6 kg. So far the effort has been to improve the supplies by means other than improving the productivity. The yield per acre of groundnut which accounts for over 70 per cent of oilseeds production has gone down from 117 lb per acre in the pre-Plan period to 661 lb after the Third Plan. The 16th annual conference of the Oil Technologists Association discussed, therefore, the problems connected with constant and steady supplies of oilseeds.

The feasibility of using hitherto unexploited oilseeds has now assumed significance. There are as many as 25 minor oilseeds which can be used for augmenting fat supplies. A remarkable example in this respect is that of the cottonseed. Two decades ago, scientists wondered whether cottonseed flour could be made available for human consumption. Cottonseed flour has become a reality today. The role of palm seeds in providing fat requirements also needs to be properly examined. Palm is considered as nature's high quality oil. The average yield of palm oil is 2.2 tonnes per acre. Palm oil and palm kernel oil are generally used in margarine, compound cooking fats etc. Sunflower is another source which is being exploited in the US and the USSR as it is considered an excellent cooking or salad oil. Sal fat has come to the limelight only in recent years.

Sal trees grow abundantly in the forests of Bihar, Madhya Pradesh and Orissa. The maximum potential availability of sal seeds works out to 113 lakh tonnes which can give about 7 lakh tonnes of sal fat. The fat is now in demand in some foreign countries such as the UK, Italy and Japan as a good confectionary fat. Another source which has remained unexplored is the Karanja seeds. The potential availability of the seeds is about 97,000 tonnes which should give about 30,000 tonnes of oil.

The oil technologists do not challenge the usefulness of the minor oilseeds in augmenting fat supplies. However, they emphasise the difficulties in collecting the minor oilseeds. A case in point is the sal seed. The experience of the oil millers is that it becomes difficult for the industry to get reliable and experienced forest contractors to collect seeds. There is labour shortage as the season coincides with harvesting of other crops. The time for collection is also limited because of inadequate access roads into the forests. The quantity and quality of seeds is unpredictable while the cost of collection remains already committed.

A section of the oil technologists contended that most minor oils had some technical disadvantages. The by-products required upgrading of quality and creation of new markets for their disposal. Thus any increase in production of minor oils would necessitate incentives to the using industry. The task of stabilising prices of oilseeds continues to bristle with difficulties. It was suggested that a good system to ensure steady and constant supplies should have the following three elements: first, bulk of stock-holding over the year by trade, secondly buffer stock-holding by the Government, and thirdly, influencing price level by buffer stock operation to ensure a fair price to the grower, the trade and the consumer. □

AUDITORS' REPORT

We have audited the attached Balance Sheet of the Bombay Branch of the Mitsui Bank Limited, as at 31st December 1970, and also the Profit and Loss Account of that Branch for the year ended on that date, annexed thereto, and report that:—

(a) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Branch so far as appears from our examination of those books;

(c) the Balance Sheet and Profit and Loss Account of the Bombay Branch of the Bank dealt with by this report are in agreement with the books of account.

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts subject to the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bombay Branch of the Bank as at 31st December 1970, and the Profit and Loss Account gives a true and fair view of the loss of the Branch for the year ended upon that date.

BOMBAY, 26th March, 1971.

REPORT OF THE AUDITORS

We have audited the attached Balance Sheet of the Indian Branches of the Bank of America, National Trust and Savings Association, as at 31st December 1970 and also the Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date annexed thereto, and report that:—

- (a) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;
- (b) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;
- (c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts subject to and read with the notes thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December 1970 and the Profit and Loss Account gives a true and fair view of the Profit of the Indian Branches for the year ended upon that date.

India and Pakistan WOOL, HOSIERY AND FABRICS—1971

Annual of the Wool, Worsted, Carpet, Jute, Coir and Hosiery Trades and Industries.

- Comprehensive details of woollen spinners, carpet, hosiery and knit goods manufacturers, wool and hair markets, wool merchants, woollen presses, bulk buyers of raw materials and finished textiles and principal stores and bazaars handling textile lines, including imported piece goods and hand knitting wools.
- This Publication is the only one of its kind catering specifically to the wool, worsted and associated trades in India and Pakistan and has a large circulation amongst Woollen, Worsted and Hosiery Mills and leading firms engaged in Manufacturing, Exporting, and Importing Wool, Hosiery, Carpets, Woollen Machinery, Spares and Accessories.

Full particulars of:

- Woollen, Worsted, Carpet, Hosiery and Jute Mills
- Coir Dealers and Exporters
- Wool Combing and Processing Plants
- Wool Merchants
- Manufacturers and Merchants of Machinery for Woollen Industry
- Raw Material Suppliers—Importers—Exporters
- Trade Organisations and Associations

EXPORT ANGLE

By Stevedore

Lag in exports

IT is still doubtful whether the final figures for 1970-71 will show that we have been able to reach the target of 7 per cent growth in exports that the Government had planned. During the month of January exports totalled Rs 143.72 crores which means during the 10-month period from April 1970 to January 1971 exports amounted to Rs 1,241.10 crores. This figure shows a rise of Rs 53.12 crores over the corresponding figure of Rs 1,187.98 crores during 1969-70. But all the same it means that exports had risen by just 4.5 per cent in April-January compared to the same period in 1969-70. Actually exports during January this year were lower than those in January 1970. It is this which has dampened the hopes that were raised when the April-December figures showed a percentage rise of 5.2 over that of the corresponding period in the preceding financial year. □

Packing credit

THE Reserve Bank of India has raised the interest ceiling to 7 per cent per annum from 6 per cent for pre-shipment (packing credits) and post-shipment credits advanced by scheduled commercial banks. However, the maximum rate of interest to be charged on credits allowed on deferred payment terms will continue to be 6 per cent. Presumably, the Reserve Bank believes that the hike in the interest ceiling for credit for current value exports will do no harm. But it recognises that there is a stiff competition in the export of capital goods where various incentives are offered by different countries. It had also to take into account that with the rise in the Bank rate from 5 per cent to 6 per cent the commercial banks had no margin left on credits advanced to exporters and the relief came only from the 1.5 per cent subsidy paid by the Government against export credit. The raising of the ceiling to 7 per cent from 6 per cent restores the margin of 1 per cent between the Bank rate and the maximum rate that can be charged by banks on current export credits. □

Kamani's big contract

THE Kamani Engineering Corporation has just announced that it has won a Rs 3-crore order for a turnkey project in Thailand. The Corporation will supply 4,000 tonnes of transmission line towers and allied equipment and erect a 230 kv double circuit line having a route length of 255 km from Sirikit Dam to Nakhon Sawan. The project is financed by the World Bank. This new contract for the Kamani Engineering Corporation comes within a week of its being honoured by the Federation of Indian Chambers of Commerce and Industry for making an impressive breakthrough in the export of transmission towers and conductors. It has exported such towers to Canada, Iran, New Zealand, Nigeria, the Philippines, the US and several other countries. (See Commerce dated April 17). □

Cables for the UAR

THE Oriental Power Cables has secured a Rs 2.7-crore order for high tension

pilc (paper insulated lead covered) underground cables with aluminium conductors from the UAR. The order is too large for Oriental Power Cables, and according to its General Manager, Mr H N. Srivastava, it will be shared with other cable companies on a consortium basis.

There is one big hitch, however, in the fulfilment of this order. It is the fact of the adverse balance of trade of the UAR with this country. The trade between the two countries is on a rupee basis which is normally supposed to be a balanced one. However, Indian exports this year have been running much ahead of the imports from the UAR. This has raised certain difficulties for the trade between the two countries and obviously Mr Srivastava feels that this imbalance in trade might upset the execution of the order. As a precautionary measure the order has been booked on a five-year deferred payment basis. The cables are needed for the UAR's rural electrification programme. This is an massive programme which will be backed by a very large credit from the Soviet Union. Quite a substantial part of the loan of LE210 million (about Rs 378 crores) that the Soviet Union agreed last month to extend to the UAR is to be spent on rural electrification of the country. As this electrification proceeds there will be scope for larger exports of cable and other electrical goods to that country provided we are able to get over the current difficulties with our rupee trade with the UAR. How this is to be done is currently engaging the attention of the Governments of the two countries. □

Uptrend in spices

WE seem to have done quite well with exports of spices during 1970-71. According to the Spices Export Promotion Council shipments during the last financial year totalled 46,373 tonnes and earned foreign exchange of Rs 38 crores. The corresponding figures of 1969-70 were 43,975 tonnes and Rs 34 crores.

Pepper, cardamom, turmeric and ginger were the important items which contributed to the higher foreign exchange earnings. Earnings of cardamom alone were of the order of Rs 11 crores against Rs 9 crores in 1969-70. Even though pepper exports did not reach last year's level, the share of pepper in the total earnings during 1970-71 was about 40 per cent while turmeric and ginger contributed 10 per cent and 7 per cent respectively. □

Transformers for Tanzania

THE Kerala Government-owned Transformers and Electricals Ltd (TELK) has secured in co-operation with the Indian consortium for power projects an order for the supply of two 50,000 kva transformers costing about Rs 10 lakhs each to the Tanzanian Electricity Supply Authority. The transformers are to be installed in Ubungo power station near Dar-es-Salaam and will be largest ones so far exported from India. The Managing Director of TELK, Mr A. O. Oommen, has said that the order was secured against keen world-wide competition. This is the

second export order that TELK has secured. The first one was from Malawi for Rs 50,000 worth of current and potential transformers. □

Dollar-earning papads

INDIAN pickles and papads do earn foreign exchange for the country. A small organisation in Bombay, Mahila Griha Udyog, earned last year about Rs 7 lakhs from the export of papads to the United Kingdom, the United States, France, the USSR and Japan. The organisation has currently an annual turn-over of Rs 40 lakhs and employs about 1,800 workers. Mr Kantilal N. Dalal, Vice-Chairman of the Processed Foods Export Promotion Council, feels that exports of papads could be stepped up to Rs 1 crore if the Government granted adequate incentives. □

Success at Hanover

INDIAN participation at the International Machine Tool Exhibition held in Hanover has been a great success. At the Fair itself, held in September 1970, the members of the Indian Machine Tool Manufacturers Association were able to secure orders of the value of over Rs 58 lakhs. The business likely to materialise as a follow up in the next one or two years would be about Rs 1.10 crores. Since then a number of agents and distributors in the European countries have come forward with offers of agency agreements with Indian firms. About 25 agencies are being finalised and nearly 37 agencies are under negotiation. The agency arrangements would give India a permanent foothold in the international market for machine tools. What was particularly heartening was that after seeing the working demonstration of the Indian machine tools, German collaborators came forward with proposals to act as distributors for these products in Germany and other overseas markets. Manufacturers from Germany and other European countries also evinced interest in collaboration with Indian manufacturers. The Hanover Fair would thus appear to have helped our machine tool industry to make a breakthrough in the export of its products to the European markets. The Indian participants at the fair included HMT, Godrej, Beco, Cooper, Kirloskar, Gedee Weiler, Telco, PSG Ind Inst, M.M. Tools, NSIC and Traub India. □

Cement shipments

THE State Trading Corporation has signed a contract for the export of 1.35 lakh tonnes of cement valued at Rs 1.75 crores during the current year. The five countries which would be buying this cement are Kuwait, Muscat, Bahrain, Dubai and Abu Dhabi. Shipments will commence in May. A delegation of the STC was recently on a visit to the Gulf countries to explore the possibility of exporting cement. The STC has plans to ship four lakh tonnes of cement during 1971-72 against 2.05 lakh tonnes valued at Rs 2.65 crores in the preceding year. One difficulty last year was inadequate shipping space. There was also the problem created by the upward trend in freight rates. □

BOMBAY DYEING

DOCUMENTS

THE ASIAN SCENE

Ill-timed signs of aid fatigue

ASIA, as a whole, has been undergoing a process of deep-seated change since the end of the Second World War, and particularly so since the commencement of an organised drive towards economic development in its various countries. While it is true that the idea and the practice of economic and social planning have become generally accepted among the developing countries of the world, it is in the understanding of what planning for economic development constitutes, rather than in its mere acceptance as a tool, that the experience of the region in the near past has been most significant.

Recent experience in the region has underlined the imbalances of concentration that earlier underlay the philosophy and practice of economic planning in the region. Important among such imbalances of concentration were (and, from place to place or time to time, may still be): (i) Relative neglect of agriculture as a sector and unbalanced emphasis on industrialisation and/or on infrastructure development *per se*; (ii) direction of planning towards increasing investment as such and inadequate attention to the promotion of productivity from the investments made; (iii) inadequate attention to internal monetary and fiscal policy and somewhat less than appropriate concern with the risks attendant on inflation or deficit financing; (iv) attempts to achieve external viability by import substitution almost at any cost with less emphasis on the factors conducive to expansion of export earnings; (v) non-recognition, or inadequate recognition, till recently, of the impact of the population problem on economic development; (vi) inadequate attention to the development of human capital resources; and (vii) inadequate attention to the social environment of economic growth to the problems of urbanisation, of redistributive mechanisms, of social stability.

With growing realisation that economic development is not the mere establishment of new industrial structures or of new railroads and ports and the like, the importance of proper policy formulation as an essential concomitant of sound investment is becoming recognised and, in varying degrees, is being reflected in the preparation of plans. The ambit of policy formulation is also being widened: the provision of incentives to maximum productivity, the rationalisation of investment on the basis of consciously-made choice between technoeconomic and socio-economic alternatives, the integration of fiscal, monetary and credit measures to serve the ends of economic progress, the promotion of efficient management, the attempts to achieve a

social framework conducive to economic growth: these are aspects of increasing awareness of the width of the spectrum of which economic development is only the middle band.

On no other field has the impact of change in the recent years been so pronounced as on the priority accorded to agriculture. The most evident outward results have been in the increase in crop production, in the attempts to increase consumption (and local production) of fertilisers and pesticides, in the efforts towards better seed selection and water management, in the evolution of appropriate agricultural credit and price policies and, in net, in the shift of relative emphasis from extensive cultivation to a balance between extensive and intensive cultivation.

The results, while varying, have shown a distinct trend for most countries, as table 1 shows, in two crops of the greatest

have been reported from time to time in the Asian developing countries, the ultimate test of advance in transportation would seem to lie in the volume of passenger and cargo traffic moved by rail and in the number of carriers using the roads. Asia, Africa and Latin America contain 71 per cent of all the world's people, but account for only 15 per cent of the world's rail freight and 17 per cent of the world's trucks and buses.* Lack of effective transportation (whether this is due to inadequate investments, uneconomic policies or a combination of both) could be, and in all probability is, a major handicap in the region, affecting the economic development by increasing costs, reducing mobility of the factors of production, lowering market access and increasing disparities within, and between, member-States.

Turning now to industrialisation, the developing countries of the region registered, statistically, progress in varying degrees. In the five-year period 1963-68, the Republics of China and Korea showed, in terms of the indices of manufacturing production, increases of 150 per cent or more. Progress in Hongkong and Singapore was

importance in the region, namely, rice and wheat.

Considerable advance has been achieved by the developing countries in the Bank's membership in investments in infrastructural and industrial activities. The production of electrical energy has an important significance not only as an indicator of, but also as a propulsive force in, the advancement of a country's economy. The figures in table 2 (which are the nearest approximations available) show the progress made in this sector.

In another important field of infrastructure development, namely, transportation, the evidence of progress has not been equally striking. Illustratively, while substantial road and rail investments

evidently equally striking. Progress in other member-countries was uneven, recording, generally, increases of about 20 to 50 per cent. These figures, in terms of indices, are, however, not accurately indicative of the extent of industrial progress.

A review of the content of industrial progress in the developing countries of the region, nevertheless, shows important changes of far-reaching significance. There was a diversification of production from lines regarded as traditional till the early 1960's. The output of iron and steel, of aluminium, of machine tools and precision instruments, of fertilisers and pesticides,

SOURCES : United Nations Statistical Yearbook, 1969, Statistical Yearbook for Asia and the Far East, 1969, Asian Economic Statistics, Reprint from the Economic Bulletin for Asia and the Far East, 1970. For Fiji, Bureau of Statistics, Current Economic Statistics, October 1970.

of chemicals, of rolling stock, vehicles and telecommunication equipment, all rose during the period. Important beginnings were made in the petrochemical and the electronic industries. Industrial progress is the sum total of investments, transfers of technology, development of operating and managerial skills and exploitation of markets; and of these factors the "gestation period" for at least the last three factors is substantial. The point to note, however, is that, in this decade, a meaningful start was made and distinct progress achieved.

There is indeed some indication that results are already beginning to show. Despite many limitations, the developing countries of the region have not merely been able to impart a significant amount of momentum to their industrial progress on the basis of import substitution, but have also begun to make some headway in the export field. Apart from the more "traditional" exports, several of the developing countries of the region have been able to move, on an internationally competitive basis, into exports, variously, of finished steel, rolling stock, fishing vessels, machine tools, telecommunication equipment, transmission equipment, tractors and construction equipment, fertilisers, electrical appliances and processed farm products. While these constitute only a small proportion of the world commerce in such goods, the fact that it has been possible to make a start is indicative of the potential of the near future, given the right policies and incentives in the developing countries and a co-operative attitude on the part of the major world buyers—the industrialised countries.

Judged from the point of view of the quantum of investment already made, it is evident that there are significant areas of under-utilisation of industrial capacity even as there are in agriculture. The reasons may be one or more of many. The performance of the region in its industrialisation strategy in the past decade also yields some valuable indicators for future policy-making. There is need for improvement in the institutional framework: more organised credit facilities particularly for working capital needs (even though national development banks have on the whole performed well in the

investment-credit function), a more careful application of the import-substitution principle in industrialisation so that the scarce resources available are put to the genuinely gainful use, strengthening of export incentives and activities designed to overcome the limitations of scale inherent in most domestic markets of the region, willingness to associate with suitable external enterprises so as to encourage a systematic updating of technological processes and managerial efficiency, rationalisation of tariff and other protective methods so that they cannot be utilised by entrepreneurs to inflict high-cost production on the consuming public and the framing of fiscal, monetary and other economic policies that would tend to maximise capital formation.

The prospects of joint multi-national investments in the region need also to be examined in detail and in concrete cases so that the widely-expressed aspirations to utilise the rich natural resources of the region to the maximum common benefit of its population do not remain only aspirations. And above all, there is the constant need to review and enhance national investments in the development of human capital resources—without which other investments cannot be decided or manipulated to maximum gain; there would be a case for a critical appraisal of the educational policies of several countries in the region so that the educational system can be made to conform better to the needs of improvement in the material well-being, which is a basic objective of economic development.

Figures of exports (f.o.b.) of the regional developing member-countries show a movement from \$8,192 million in 1963 to \$12,544 million in 1969 while imports (c.i.f.)

moved from \$10,776 million to \$16,380 million in the same period. In addition to the increasing imbalance between exports and imports there is in most of the countries the pressing burden of service-obligations on past foreign debt (even though incurred in most cases for developmental purposes). This latter factor is particularly important in the countries which began their development effort in the 1950's, when global philosophy on developmental aid had not yet reached the stage which made "soft loans" a significant element of developmental aid in the 1960's.

From overall projections made by the World Bank for South Asia and East Asia, the service payments on existing foreign debt, which for the two sub-regions crossed the billion dollar level in 1968-69, will continue to hover near the \$1.2 billion level till 1975. The gradual decrease thereafter, which is possible according to the forecasts based on existing debt, can only materialise if further developmental aid is given on more appropriate terms than has been the case so far and if the case for "restructuring" of debt is sympathetically viewed in deserving cases.

The slowness of pace in economic growth so far in the Asian developing countries as a whole, the continuing imbalance between exports and imports, and the strain of debt service payments already felt and certain to continue for a considerable time to come—these, basically, constitute the case for more adequate foreign aid on truly concessional terms. The evidence, however, has been that the net aid receipts into the Asian region have certainly not kept pace with the need—they have in fact deteriorated for South Asia (Table 3).

At a time when a break-through in agriculture is clearly in sight provided the resources are made available, at a time when developing members have shown on the whole a distinct improvement in internal resource mobilisation, at a time when, hopefully, trade opportunities in new fields may open up for developing countries if investment flows can be maintained, the present signs of aid fatigue are singularly ill-timed. Not only is the time ripe for an increase in aid flows—on appropriate terms—but organisations such as the Asian Development Bank now provide increasingly more efficient mechanisms through which aid can be channelled and applied where it will do most good.

Asian developing countries, noting the aid fatigue in certain parts of the world only partly made up for by the decisions of some other countries, as instanced particularly by Japan, to enlarge the quantum of their aid, also hope for further liberalisation of the terms of aid. □

Table 3 : Net total official aid flows reaching South Asia and the Far East

Classification	1965	1966	1967	1968	1969
South Asia	1,915.2	1,788.0	2,041.7	1,630.8	1,398.3
Far East	944.1	1,135.9	1,372.5	1,412.8	1,987.0
Total	2,859.3	2,923.9	3,414.2	3,043.6	3,385.3

LABOUR GAZETTE

Started in 1921, the *Labour Gazette*, issued monthly, is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour in India and abroad. It contains statistical and other information on consumer price index numbers for working class, industrial disputes, absenteeism, trade unions, industrial relations, cases under labour laws, glimpses of industrial awards, labour legislation, etc. Special articles on matters connected with labour and industrial relations are published from time to time.

• *Annual Subscription* (September-August): Rs. 12.

• *Back Copies*: If available, supplied at Rs. 15 per set.

Company Meeting

Dunlop India Limited

Chairman, Mr R. G. S. Nairn's Review

THE following is the address by the Chairman, Mr R. G. S. Nairn, at the 45th Annual General Meeting held on April 19, 1971, at Calcutta.

I have pleasure in welcoming you to the 45th Annual General Meeting of the Company.

As the Directors' Report and Accounts for the year ended 31st December, 1970, have been in your hands for some time, I should like, with your permission, to take them as read.

The Year's Trading

Total sales increased by 8 per cent over 1969 to Rs 87.71 crores.

Once again the demand for nearly all our products was in excess of our production capacity. In the case of automotive tyres, the position was aggravated by the dislocation of production in some other tyre manufacturing units, which resulted in a shortage of truck and rear tractor tyres in the second half of the year. This situation was rectified in conjunction with the other members of the Automotive Tyre Industry. Despite overall cost increases, the Automotive Tyre Industry voluntarily reduced the replacement market prices for truck and rear tractor tyres by 0.75 per cent with effect from 1st January, 1971, in order to create an atmosphere in which these tyres could become available at fair prices. I am pleased to tell you that these measures have had the desired effect. The Tyre Industry also reduced the Defence prices for truck tyres by 0.75 per cent with effect from 1st January, 1971.

During the period of shortage, your Company naturally had to give priority to supplies for Defence and State Transport organisations to enable them to keep their fleets operational, and to vehicle manufacturers to maintain their programmed production. However, due to the shortage of Industry capacity for rear tractor and earthmover tyres, agricultural tractor and earthmoving machinery manufacturers were not able to obtain their full requirements. We are doing everything possible to expand output of these tyres.

The demand for nylon truck tyres continued to increase in the domestic market. However, Industry production could not keep pace after meeting export commitments, due to the insufficient availability of nylon tyre cord, all of which is imported. It is important that indigenous production of nylon tyre cord becomes available as soon as possible and, in the meantime, larger imports should be permitted.

The total sanctioned capacity of the existing automotive tyre manufacturers is 52 lakhs; a Letter of Intent for 4,00,000 tyres was issued to a new unit in 1969 making a total of 56 lakhs. However, some of this capacity is unlikely to become available until 1974/75.

Experience has shown that due to labour problems, shortage of electricity,

dislocation of transport and similar problems, a maximum of 90 per cent of the Industry capacity has been utilised in any year. On this basis, in 1973/74 the effective Industry capacity is likely to be reduced to about 50 lakh tyres compared with an estimated demand of 75 lakh tyres. The demand could increase to about 80 lakh tyres in view of the more intensive utilisation of vehicles as a result of increasing industrial and agricultural activity, and if some of the new vehicle manufacturing projects materialise.

These facts and the recent tyre shortage once again highlight the need for a Government policy which will ensure that there is sufficient available capacity and actual production of automotive tyres and tubes to meet the growing demand of the domestic and export markets. This policy must ensure that Letters of Intent are implemented quickly. The reason for the serious tyre shortage which developed in 1968 was that four proposed new units which were granted Letters of Intent in the early 1960s for a total of 12 lakh tyres did not implement their schemes and the Government had finally to revoke these Letters of Intent. A number of Letters of Intent have recently been issued to new units for a total capacity of 24 lakh tyres. Based on past experience, it is likely to take a new manufacturer several years to implement a capacity of 3,00,000 tyres, which is now considered to be the minimum economic unit. On the other hand, an existing manufacturer with experience in implementing expansions and with the necessary technical and managerial skills, can achieve this within two years.

The Government should not, therefore, wholly rely on new units to meet the additional demand for tyres but should also permit expansion to existing manufacturers to make sure that the country is not short of a vital product. Your Company is ready to play its part in meeting the future demands of the country.

During the year, we continued our efforts to expand the Industrial Products side of our business and our two outstanding achievements were:—

1. A contract worth Rs 1.5 crores with the Neyveli Lignite Corporation for the supply of special cotton/nylon conveyor belting. This is the largest contract ever to be placed in this country for conveyor belting.

2. Introduction of Metalastik rubber to metal bonded components for the Indian Railways, particularly a large mounting for diesel and electric locomotives.

Exports

In 1970, your Company achieved yet another record—our exports of all products crossed the Rs 3 crore mark, which represents an increase of approximately 9 per cent over 1969. This was achieved in the face of stiff international competition

and was only made possible by the development of new markets, constant market research, product development and the continuous assistance which we receive from our U.K. Associates and their worldwide distribution organisation. A notable achievement was that our exports to the General Currency Area markets, where competition is most severe, increased by 36 per cent.

Automotive tyre and tube exports in 1970 were 11.6 per cent of our production as against the guarantee of 10 per cent which we have given to the Government. We consider this to be a very good performance for a non-traditional item. Dunlop India's automotive tyre and tube exports constituted 43 per cent of the total exports of these products from India.

During the year, we developed ten new markets and introduced a special type of cycle tyre called "Slik" for the sophisticated American market, a new tyre design for earth-moving machines and two new types of cycle rims. Our cycle tyres greatly assist the exports of bicycles manufactured in the country; in fact, many overseas orders stipulate the fitment of Dunlop cycle tyres. Our exports of cycle tyres and tubes were 77 per cent of the total exports from the country.

It is our constant endeavour to maximise exports but our efforts have at times been handicapped by labour problems, strikes at the ports, irregular availability of shipping space and ever increasing freight rates. Recently, and without reference to the Industry, the export of nylon tyres to the U.A.R. has been banned for 1970/71 under a bilateral trade agreement with that country. Unless this ban is removed, our export efforts will be seriously affected, and the important U.A.R. market, which has been developed after much hard work, will be lost to the Indian Tyre Industry. It would be helpful if the Government were to consult the Industry and take us into its confidence when such agreements are negotiated.

Our export efforts are also dependant very largely on our ability to produce and supply goods at competitive prices. Duty drawback rates have a significant influence and have been suddenly reduced in the past. These are at present once again under review and it is hoped that the rates will not be reduced again; if they are, we may not be able to quote competitive prices. It should be appreciated that with such uncertainties, we are not always able to quote prices for delivery in the future which is a normal characteristic of export business.

Cash subsidy rates should also be established at levels which will encourage exports. We are still losing substantial amounts on our export business.

If such difficulties are not overcome soon, some enquiries for exports which are now being received will ultimately be

diverted by the customers to other sources of supply. This will obviously affect our export achievements.

There is, therefore, an urgent need for the Government to establish long term policies to enable the exporter to plan well ahead to increase exports.

Costs

Costs have risen during the year mainly on account of increases in raw material prices. In the last two years, cotton prices have increased by nearly 50 per cent, and since January 1971 they have risen by as much as 20 per cent. This has necessitated increases in the selling prices for cycle tyres. An excise duty of Rs 300 per tonne has been imposed on indigenous synthetic rubber and since November 1970 octroi has become applicable to all raw materials received at our Sahaganj factory. To these burdens must be added a substantial increase in wages, salaries and dearness allowance.

State trading agencies are now taking an active part in procuring and supplying some of our major raw materials. The State Trading Corporation, for the first time, has commenced purchasing indigenous natural rubber in order to relieve the burden of high stocks with the small growers. We are glad that the rubber purchased by the S.T.C. is available to the Industry at the controlled prices. However, certain other raw materials, such as nickel and titanium dioxide, which have now been canalized through State organisations, cost considerably more than they did when we were able to obtain these materials through direct imports.

Production

Tyre production at our Sahaganj factory was approximately the same as in 1969 with the exception of cycle tyres, which were badly affected by labour difficulties. Consequently, the shortage of Dunlop cycle tyres increased in the domestic market and our export deliveries were badly affected.

Industrial Products output at Sahaganj was satisfactory except for bicycle rims, which suffered severely from the shortage of steel rim strip; this has created difficulties for some of the bicycle manufacturers. Although the import of some rim strip has been permitted by Government, we are still short and there may be further interruptions in the production programme.

Production at the Ambattur factory increased significantly due to the completion of a part of our expansion programmes which will be finished in 1971 and fully effective in 1972. Automotive tube production commenced at Ambattur during 1970. Production of bicycle rims, against the licence for 15 lakhs rims, will commence at Ambattur in 1971.

In accordance with Government directives, we are doing everything possible to maximise production at both factories in order to avert any possible shortages in the future.

Product Development

The company's products continued to enjoy the highest reputation for quality and service during the year.

In keeping with our policy to bring to our customers improved products of latest designs, we have been evaluating modern patterns in the truck tyre range

and the benefits will become apparent to consumers with the introduction of new truck tyres during 1971.

In 1970, we introduced a premium cycle tyre, the "Dunlop Goldseal." This very modern design of tyre is already manufactured in several factories in the Dunlop Group. We expect that it will play an important role in assisting bicycle exports and in developing cycle tyre exports, and will also find its place as India's top quality cycle tyre.

We continued to develop new tyres for the latest civil and military aircraft operating in India and it is our intention to try and make the country self sufficient in aero tyres. During the year, we also became the first manufacturer in India to produce tyres for industrial forklift trucks.

These developments and many others have only been possible as a result of the continuous technical assistance that we receive from our U.K. Associates supplemented by local development work. Our new Technical Aid Agreement, which was submitted to Government at the end of 1969, has not yet been finalised. I am pleased to tell you that Dunlop Limited has been continuing to give us technical assistance during 1970 in the belief that the Government will appreciate the need for us to continue the purchase of technical know-how on a reasonable cost sharing basis.

Tyre technology is continuously changing and the tyre that we make today is very different in terms of design, raw materials and construction, to the one made only a few years ago. Although we have always carried on development work in India to adapt some of the know-how to suit local conditions, it is not possible or practicable for our Company to duplicate the research and development work carried out by our U.K. Associates as the resources required are enormous and completely beyond our capacity.

I have mentioned earlier the very important plans for increasing exports. Success in this field is dependant on our ability to continue the manufacture of products which are fully competitive in international markets in design, quality and performance. The tyre industry throughout the world is in the throes of a technological revolution brought about by new developments in vehicle design, increasingly stringent safety requirements and development of new synthetic polymers and fibres. New tyre designs are gradually replacing conventional constructions; steel, nylon, polyester and other materials are becoming increasingly important in tyre production. We must, therefore, be permitted to keep continuously up to date with these developments not only to compete successfully in the export markets but also to bring the benefits of the latest developments to our domestic customers.

It is important to see this point in the right perspective bearing in mind that the total production of automotive tyres in India is less than 1 per cent of the world production. However, for some products, such as cycle tyres, where the volume of production reaches a sufficiently high level, local research and development work can be undertaken. Our U.K. Associates have proposed that we undertake this work and sell technical know-how to other cycle tyre manufacturers in the

Dunlop Group thereby earning valuable foreign exchange for the country.

Diversification

We are always seeking opportunities for diversification into product fields, which are capital intensive and require sophisticated technology. In view of the increasing need for such new and modern products in the country, we feel that we can play an important part, and we have submitted an application to Government for the manufacture of steel cord conveyor belting, which is essential for iron ore and lignite mining.

There is an urgent need to increase the manufacturing capacity for conventional rubber conveyor belting, and fan and vee belts. By 1973, there will be a substantial shortfall and imports are currently being allowed to augment indigenous production. We, therefore, hope that the Government will take urgent steps to licence additional capacity to existing manufacturers who are in a position to implement expansions quickly and to offer a technologically competent product to the market.

Our Letters of Intent for golf and tennis balls are still under negotiation with the Government.

Personnel

Despite the unsettled conditions, employee relations have remained generally good during the year. In 1970, we concluded negotiations and signed a new five-year agreement covering the engineering operatives at our Sahaganj factory in West Bengal.

The agreements covering the production operatives and staff at the Sahaganj factory, and the staff at the Head Office and the District Offices throughout the country, expired at the end of the year. New agreements are now being negotiated and we hope to finalise them in the near future.

From its inception, the Company has adopted progressive methods and techniques with a view to improving the welfare and conditions of service of all employees. However, it must be remembered that there are limitations and the ultimate welfare of the employees depends upon the continuing prosperity of the Company.

Our training programmes for personnel at all levels continue to make good progress. Consistent with the Company's policy to keep pace with the technological changes and to improve managerial efficiency, new training programmes were developed and introduced.

Profit and Loss Account and Balance Sheet

The financial results for 1970 have already been covered in the Directors' Report, but there are a few points that I would like to make.

As you will have noticed from the accounts, the main feature of the year's trading is that the significant increase in income yielded very little by way of additional profit. The major reasons for this were increased raw material and personnel costs and higher depreciation charges. Another contributory factor was increased interest charges reflecting the higher level of bank borrowings which were needed to finance additional raw material stock holdings, particularly natural rubber and textiles. These increases more than offset the signi-

ificant reduction in accounts receivable, which have been achieved through our continued efforts to make the optimum use of all available liquid resources.

Once again, your Directors have taken into account the substantial cash requirements needed to finance your Company's expansion plans. Accordingly, they propose to maintain the ordinary dividend at 20 per cent for the year, the same as for 1969 and retain the balance of available profit amounting to Rs 1,65,99,000 by transferring this amount to general reserve.

Capital expenditure in 1970 was Rs 3.20 crores. In addition, commitments for capital expenditure at 31st December, 1970, amounted to Rs 5.67 crores. Expenditure includes the implementation of the industry licence received in December 1967 to increase the Company's automotive tyre and tube capacity by 1,35,600 units and 1,24,800 units per annum respectively. Also included are commitments made against the industrial and capital goods licences received in 1969, for the automo-

tive tyre and tube and bicycle rim expansions at the Ambattur factory, and for the replacement of old equipment at the Sahaganj factory.

The major part of the expenditure on the current expansion plans will be met from the Company's own resources. However, additional finance of approximately Rs 2 crores will be required and an application has accordingly been made to the Controller of Capital Issues for the issue of 15,00,000 Ordinary Shares at a premium of Rs 4 per share to members in the ratio of 3 new Ordinary Shares for every 20 Ordinary Shares held. The proceeds of the proposed issue will be Rs 2.1 crores.

The Board

Mr J. A. Moore relinquished his appointment as Managing Director during the year on retirement after long and distinguished service with the Company. I am sure you will join me in wishing Mr Moore a long and happy retired life.

Mr Sachin Chaudhuri also retired from the Board. I would like to take this opportunity of thanking him on your behalf for the wise counsel that he has given us and for the great interest that he has always taken in the Company.

Mr K. Padmanabhan also retired at the end of the year. Here again I would like to take this opportunity of thanking him for his many years of devoted and loyal service to the Company.

Mr J. R. Scott retired from the Board during the year on taking up an appointment with Dunlop Limited, UK and Mr C. J. T. Blease took over from him.

We have now re-organised our executive management team with the appointment of four new wholetime Directors. These are Mr R. N. Basu, Director Accounting, Mr N. S. Bedi, Sales Director Industrial Products, Mr R. M. Bhandari, Director Administration and Industrial Relations and Mr L. J. Tompsett, Sales Director Tyres.

I am sure you will join me in extending a warm welcome to the new Directors.

Future Prospects

Our diversification plans, which I have already mentioned, are designed to broaden the base of the Company's manufacturing activities.

We hope that we will be permitted to have a share of the expansion of the Automotive Tyre Industry, and we have submitted an application to Government for permission to establish a new factory with an initial capacity of 3,00,000 automotive tyres and tubes in Goa, which is an industrially underdeveloped area. In keeping with our policy of forward planning, we have already purchased some land. We hope that this application will be considered favourably, particularly in view of our creditable export performance, a good record of supplies to Defence and vehicle manufacturers and our progressive manufacturing and development policies.

Under the Monopolies and Restrictive Trade Practices Act, your Company can be considered a dominant undertaking. This is so only because according to the Act the basis for calculating market share is the actual production and not the licenced capacity. In 1970, our share of the Automotive Tyre Industry's production was approximately 38 per cent. Our licenced capacity, on the other hand, is only 28 per cent of the total capacity sanctioned by Government to the Industry. It will thus be seen that loss of production in other units and the extent to which they have implemented licenced expansions can actually determine whether an undertaking is dominant or not.

As mentioned earlier the expansion of the Company's Ambattur factory is making good progress. Given stable conditions, your Company will continue to grow and we face the future with confidence and optimism.

In conclusion, I should like to thank all our employees for the efforts they have made during 1970 towards the progress of the Company.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

BALANCE SHEETS

EXPANSION CONTINUES

Standard Mills pays more

THE Standard Mills Co Ltd (Chairman: Mr Arvind N. Mafatlal, Bombay) has reported better results for the year ended December 31, 1970. Its sales have increased to Rs 27.7 crores from Rs 24.6 crores in the previous year. The gross profit improved to Rs 3.8 crores from Rs 3.3 crores. The net profit, after depreciation and taxation, was maintained at Rs 1.87 crores. The ordinary dividend has been stepped up by 3 per cent to 28 per cent.

The company's gross profit margin works out to 13.7 per cent against 13.3 per cent. The ratio of net profit to net worth comes to 22 per cent (26.3 per cent).

During the year under review, the company's textile turnover at Rs 19.14 crores was Rs 1.63 crores higher than that of the previous year. By catering to the consumers preferences, the textiles division was able to maintain a creditable sales performance and also show better profitability. During the year 109,163 spindles and 2,070 looms, inclusive of 777 automatic looms, were in operation.

All the plants of the chemicals division worked well and recorded higher output than in the previous year. Caustic

ratory, Poona, is nearing completion and will go on stream shortly. The company has received a letter of intent from the Government of India for expanding its present manufacturing capacities by 17,330 tonnes of caustic soda, 15,012 tonnes of chlorine and 5,000 tonnes of hydrochloric acid. Necessary follow-up action is being undertaken.

In the year under review, the first phase of modernisation and renovation of the company's textile units has just been completed. The amount spent during the year on additions and replacements of plant and machinery, buildings, etc was Rs 1.06 crores. With a view to equipping itself better in the coming decade the company has embarked on a large-scale automation and modernisation programme, particularly in the weaving department, at an estimated cost of Rs 1.35 crores. This programme is expected to be completed by the close of 1972. Additions to and/or replacements of plant and machinery, buildings etc in the chemicals division amounted to Rs 26.71 lakhs.

Wimco

THE Western India Match Co Ltd (Chairman and Managing Director: Mr Akbar Hydari, Bombay) expanded its sales for the year ended December 31, 1970 to Rs 28.1 crores from Rs 26.7 crores in the preceding year. The gross profit was Rs 2.35 crores (Rs 2.37 crores). The net profit, after depreciation and taxation, amounted to Rs 89 lakhs (Rs 87 lakhs). The dividend was maintained at 12 per cent, payable on the increased capital. During the year under review the subscribed capital of the company was raised to Rs 495 lakhs from Rs 412.50 lakhs by issue of bonus shares in the ratio of 1:5.

The company's gross profit margin works out to 8.4 per cent against 8.9 per cent. The ratio of net profit to net worth comes to 13.1 per cent (13.4 per cent).

During the year under review production at the company's factories was satisfactory. Sales of matches were about 15,000 cases above the previous year (including nearly 2,000 cases more of wax vestas).

The production of paper was 5,581 tonnes (6,284 tonnes) and sales were 5,734 tonnes (6,264 tonnes). The production of chlorates was 5,066 tonnes (5,180 tonnes) and sales were 5,014 tonnes (4,974 tonnes), while that of salt (packed out) was 19,500 tonnes (41,124 tonnes) and sales were 20,433 tonnes (40,194 tonnes).

Development work on cardboard continued. About 4 per cent of the company's production in 1970 comprised cardboard boxes. On the export front, the company did better than in the previous year and added two new markets, Afghanistan and Brunei. Large orders were booked from Saudi Arabia which will be executed in

the current year. Eastern Europe is now showing some interest in the company's products and some orders are expected to be received from this area in the current year.

The company has over 400 stock points in the country and 25,000 wholesale outlets serving half a million retailers. The distribution of potassium chlorate in the South through the company's own depots was very satisfactory. A specially refined variant known as "Ballon" quality is gaining popularity. Sales in the North, where potassium chlorate is used mainly for textile dyeing and printing have not developed so well. The output and consequently sales from Vedaraniyam salt works were severely curtailed by persistent rains, even though the company's performance in comparison with the neighbouring operators was better.

The scheme to manufacture magnetite electrodes at Ambarnath near Bombay was complete in all respect except for the availability of the basic ore raw material. This must be imported for the present and there have been licensing delays. Permission to import them has now been received and

some ore is expected during the current month (April). In the meantime there will be trials with indigenous ore to see if it can be developed into a suitable substitute.

The disturbed labour situation in West Bengal is responsible for the delay in commissioning the semi-chemical pulp plant alongside the company's Alambazar Paper Mill. All the equipment is installed and this pilot plant is expected to commence operations in the near future.

Nizam Sugar

THE Nizam Sugar Factory Ltd (Chairman: Mr Anil De, Hyderabad) suffered a set-back in its working for the year ended September 30, 1970. Sales were Rs 7.9 crores against Rs 7.6 crores in the previous year. The gross profit dropped to Rs 33 lakhs from Rs 161

soda, caustic potash, hydro-chloric acid and chlorine were well received in foreign markets and the company established its primacy in the field of exports by exporting directly and through merchant-exporters chemical products of the value of Rs 42 lakhs.

The erection of the pilot plant for the manufacture of carbon tetrachloride and chloroform set up in technical collaboration with the National Chemicals Labo-

lakhs. The lower profit was mainly due to the fall in the selling price of free sugar. The average price per quintal of sugar (exclusive of excise duty) realised during the year was Rs 121.16 against Rs 155.73 of the previous year. This accounts for a considerable reduction of profit. Further, the plantations suffered a loss of Rs 11 lakhs due to delayed monsoon and the lack of adequate irrigation in April, May and June 1969. The other activities of the company have also resulted in losses. After providing for depreciation and taxation, the company has suffered a loss of Rs 10 lakhs (profit of Rs 89 lakhs). The ordinary dividend has been pruned to 10 per cent from 12 per cent. The sanction from the Govern-

covery rate was 10.23 per cent (10.55 per cent). In regard to the output from the company's own farms, the yield was 85,440 tonnes (1.48 lakh tonnes) of cane at an average of 44 tonnes (75 tonnes) per hectare. The special farms which the company cultivated on joint-cultivation basis with the ryots supplied 10,362 tonnes of cane.

The production in the confectionery unit was 132 tonnes (39 tonnes), with sales at 135 tonnes (96 tonnes). The unit suffered a loss of Rs 2.56 lakhs (loss of Rs 2.58 lakhs). The working of the carbon dioxide plant showed a loss of Rs 4.37 lakhs (loss of Rs 33,531). The animal feed plant produced 3,336 tonnes (3,206 tonnes) of various feeds. The working results showed a loss of Rs 2.14 lakhs (loss of Rs 2.50 lakhs). The aerated water unit worked on an experimental basis during the year also and turned out 53,391 bottles (54,000 bottles) of soft drink. This unit suffered a loss of Rs 3,183 (loss of Rs 2,949).

ment for the issue of bonus shares of Rs 36.80 lakhs in the ratio of 1:3 has been received by the company.

During the year under review 5.48 lakh tonnes (4.83 lakh tonnes) of cane was crushed and 56,052 tonnes (51,071 tonnes) of sugar was produced. The re-

Mitsui Bank

THE performance of the Mitsui Bank Ltd (Chairman: Mr Kyubei Tanaka, Tokyo) was creditable in the year ended September 30, 1970. The interest earned by the bank on loans and discounts increased to 108 billion yen from 91 billion yen in the previous year. The net profit for the year was 10 billion yen (8 billion yen). The dividend was stepped up by one per cent to 10 per cent. An amount of 2.7 billion yen (nil) was transferred to reserves. Deposits of the bank rose to 1,722 billion yen from 1,507 billion yen. This was in spite of the restrictive credit conditions in Japan. Loans and bills discounted were 1,557 billion yen (1,371 billion yen).

The bank's overseas branches continued to show better results in the year under review. In July the bank expanded its overseas network to Australia by opening the Melbourne representative office. The bank has maintained its leading position in the activities of bond trusteeship in Japan. The new issues under the bank's trusteeship during the term ended 30th

September 1970 numbered 50, amounting to 111 billion yen. Of these 48 issues amounting to 89 billion yen were ordinary corporate bonds and four issues amounting to 22 billion yen were convertible bonds. As a result, the corporate bonds outstanding under the bank's trusteeship at the close of September 1970 advanced at 887.6 billion yen. This figure represented as high as 31.4 per cent of the total national

Hindustan Steel

The turnover of Hindustan Steel Ltd, Hinoo, Ranchi, for the year ended March 31, 1970 rose to Rs 381.33 crores from Rs 320.38 crores in the previous year. The provision for depreciation for the year was Rs 64.67 crores (Rs 59.78 crores). Excise duty absorbed Rs 44.64 crores (Rs 37.93 crores). The net loss for the year amounted to Rs 10.47 crores against a loss of Rs 39.92 crores in the previous year. The improvement in the working results was due to the higher level of production, general improvement in the yields at major producing units, an average increase of Rs 75 per tonne in the steel prices with effect from January 1, 1970, improved export margins in favourable international market conditions and higher margin realised through stockyards and by-products sales. During the year under review, the output of hot metal was 44.93 lakh tonnes (43.26 lakh tonnes), and that of steel ingots was 37.81 lakh tonnes (37.21 lakh tonnes). The production of saleable pig iron was 11.38 lakh tonnes (11.13 lakh tonnes) and that of saleable steel was 27.85 lakh tonnes (26.18 lakh tonnes).

The production at the Alloy Steels plant amounted to 65,600 tonnes in terms of ingots (39,800 tonnes) and that of forged and saleable steel was 41,100 tonnes (23,600

tonnes). Among the by products, production of calcium ammonium nitrate (25 per cent N₂) at the Rourkela Fertilizer Plant fell from 1.93 lakh tonnes in 1968-69 to 1.20 lakh tonnes in the year under review. This fall was due to the reduction in the availability of coke oven gas to be fertiliser plant. Despatches from the three main steel plants at Bhilai, Rourkela and Durgapur rose by three per cent in the case of saleable steel and 0.8 per cent in the case of pig iron. One special feature was that during the year the despatches of steel ingots rose to 2,14,600 tonnes as against 49,000 tonnes in the previous year. Of this quantity, 10,300 tonnes were exported, 92,500 tonnes were made available to another steel company in India and 90,300 tonnes were accounted for by inter-plant transfers and the balance was made available to the Indian market for the benefit of the re-rolling industry. Despatches of finished steel from the Alloy Steels Plant rose to 35,200 tonnes during the year as compared to 16,400 tonnes in the previous year. Due to fall in production of calcium ammonium nitrate, despatches declined from 1.76 lakh tonnes in the year 1968-69 to 1.36 lakh tonnes in the year under review.

Export earnings on f. o. b. basis amounted to Rs 45.55 crores (Rs 41.55 crores). Although there was a decrease in the quantity of export made in the year—9 lakh tonnes were shipped against 10.31 lakh tonnes in the previous year—higher unit earnings secured in a favourable market situation sustained f.o.b. realisation at this record level. Nearly 95 per cent of the export orders in terms of value was secured by dealing with foreign buyers, thereby effecting a saving of Rs 2.2 crores in agency commission.

India Sugars and Refineries

Sales of the India Sugars and Refineries Ltd, Hospet, for the year ended September 30, 1970 have declined to Rs 2.48 crores from Rs 3.26 crores in the previous year. The profit for the year was Rs 1.90 lakhs against a loss of Rs 24.95 lakhs in the previous year. During the year under review, the factory crushed 2.39 lakh tonnes of cane (2.49 lakh tonnes) and produced 19,830 tonnes (22,669 tonnes) of sugar with an average recovery of 8.58 per cent (9.06 per cent). The poor results of the year's working are due to a very low recovery of sugar, very uneconomic free-sale sugar prices, heavy interest charges due to accumulation of stocks and lower and uneconomical price fixed by the Central Government for levy sugar. The Pampasar distillery unit produced over 37 lakh litres (30 lakh litres) of rectified spirit. The working of the Indian-made foreign liquor section has also shown considerable improvement.

Killick Nixon

Sale of products of Killick Nixon Ltd, Bombay, for the year ended November 30, 1970, has increased to Rs 4.63 crores from Rs 1.93 crores in the previous year. The net profit, after providing Rs 6.59 lakhs (Rs 6.82 lakhs) for depreciation and Rs 9 lakhs (Rs 5 lakhs) for taxation, amounted to Rs 12.68 lakhs (Rs 11.17 lakhs). The dividend has been maintained at 10 per cent. During the year under review, the production of steel files was lower than in the previous year. The total quantity sold was, however, marginally higher than in the previous year although the sale value

realised was less due to a considerable increase in the number of files exported. The company negotiated the largest single order with the State Trading Corporation of India for tool and alloy steel valued at nearly Rs 1.75 crores. The company has been appointed as consultants by the STC for the sale of this material to consumers all over the country. The turnover of the agency department showed a healthy growth, especially in the sale of Killicks pressure cookers. The performance of the shipping, clearing and forwarding departments was again up to the mark. The company's export showed a further rise during the year, the main increase apart from steel files, being in the business in precious and semi-precious stones.

Associated Stone Industries

The sales of Associated Stone Industries (Kotah) Ltd, Ramganjmandi (Western Railway), aggregated Rs 1.26 crores for the 11-month period ended September 30, 1970, against Rs 1.36 crores in the year ended October 31, 1969. The net profit, after providing Rs 2.24 lakhs

(Rs 2.22 lakhs) for depreciation and Rs 5.50 lakhs (Rs 14 lakhs) for taxation, amounted to Rs 6.42 lakhs (Rs 8.46 lakhs). The ordinary dividend has been maintained at 20 per cent. In the allocation, the general reserve got Rs 5.94 lakhs (Rs 7.50 lakhs). The power connection has been given to the new polishing factory at Kudayala from September 16, 1970 on a 33 kv line. This factory is now running three shifts from October 1, 1970. The production and sales of Kotah Stone up to January 30, 1971, since the close of the period under review have decreased as compared with the figures of the corresponding period of the previous year because of shortage of labourers and chronic shortage of wagons.

Preliminaries

Ceat Tyres

year ended December 31, 1970 at 11 per cent subject to tax. The dividend, when approved, will be paid on or after May 15, 1971 to those shareholders whose names stand on the Company's register on April 2, 1971.

Ahmedabad Advance

The total net turnover including that of the metals division of the Ahmedabad Advance Mills Ltd, Bombay, for the year ended December 31, 1970 has risen to Rs 8.26 crores from Rs 6.92 crores in the previous year. The net profit, after providing Rs 33.97 lakhs (Rs 32.21 lakhs) for depreciation and Rs 16 lakhs (nil) for taxation, amounted to Rs 42.72 lakhs (Rs 23.69 lakhs). The ordinary dividend has been stepped up to 12 per cent from 9 per cent. The development rebate reserve absorbed Rs 19.50 lakhs (Rs 23.50 lakhs) and the general reserve Rs 23.20 lakhs (Rs 18,894). The company proposes to issue right shares

of Rs 21 lakhs in the ratio of one new ordinary share for every five shares held.

Svadeshi Mills

The net turnover of the Svadeshi Mills Co Ltd, Bombay, for the year ended December 31, 1970 has increased to Rs 10.54 crores from Rs 8.95 crores in the previous year. The net profit, after providing Rs 35.62 lakhs (Rs 39.91 lakhs) for depreciation and Rs 25 lakhs (Rs 15 lakhs) for taxation, amounted to Rs 24.06 lakhs (Rs 13.16 lakhs). The ordinary dividend was stepped up to 12 per cent from 9 per cent. The development rebate reserve absorbed Rs 3.80 lakhs (Rs 2.55 lakhs) and general reserve Rs 20.30 lakhs (Rs 10.55 lakhs).

Rajasthan Spinning

Total sales of Rajasthan Spinning and Weaving Mills Ltd, Bhilwara (Rajasthan) for the year ended September 30, 1970 have increased to Rs 5.14 crores from

Rs 3.82 crores in the previous year. The net profit, after providing Rs 9.95 lakhs (Rs 9.42 lakhs) for depreciation, amounted to Rs 49.33 lakhs (Rs 22.06 lakhs). An amount of Rs 23 lakhs (nil) has been set aside for the development rebate reserve. The ordinary dividend for the year was 7-1/2 per cent (nil) payable on the increased capital. In the year under review, the ordinary paid-up capital of the company was raised from Rs 43.85 lakhs to Rs 57 lakhs by issue of bonus shares of Rs 13.15 lakhs in the ratio of three bonus shares for every 10 shares held. During the year under review, total export of the company rose to Rs 74.94 lakhs from Rs 41.77 lakhs in the previous year. The company has taken up a scheme for diversification including installation of a dyeing plant. The estimated cost of the scheme is Rs 50 lakhs out of which Rs 15 lakhs have already been spent. A loan of Rs 30 lakhs is expected from Industrial Finance Corporation of India against the scheme.

Amar Dye-Chem

Total Sales of Amar Dye-Chem Ltd, Bombay, for the year ended December 31, 1970 have increased to Rs 10.11 crores from Rs 6.71 crores in the previous year. The net profit, after providing Rs 75.81 lakhs (Rs 50.75 lakhs) for depreciation and Rs 78.50 lakhs (Rs 39.50 lakhs) for taxation, amounted to Rs 83.22 lakhs (Rs 43.17 lakhs). The ordinary dividend has been stepped up to 14 per cent from 10 per cent. The development rebate reserve absorbed Rs 20.08 lakhs (Rs 4.90 lakhs) and the general reserve Rs 54.78 lakhs (Rs 25.45 lakhs).

Pfizer

Sales of Pfizer Ltd, Bombay, for the year ended November 30, 1970 have increased to Rs 17.34 crores from Rs 16.37 crores in the previous year. The net profit, after providing for depreciation and taxation, amounted to Rs 1.55 crores (1.86 crores). The directors have recommended a final dividend of 7 per cent. This along with the previous three interim dividends of 6 per cent each makes a total dividend of 25 per cent (24 per cent for 1969) for the year 1970.

Tata Mills

The total net turnover of the Tata Mills Ltd, Bombay, for the year ended December 31, 1970 has increased to Rs 10.59 crores from Rs 9.65 crores in the previous year. The net profit, after providing Rs 67.50 lakhs (Rs 68.97 lakhs) for depreciation, which includes Rs 35.11 lakhs for previous year, amounted to Rs 14.54 lakhs (Rs 1.23 lakhs). After deducting the loss of Rs 13.04 lakhs (loss of Rs 14.27 lakhs) brought in from the previous year, the disposable profit amounted to Rs 1.50 lakhs (loss of Rs 13.04 lakhs). Out of this, the general reserve got Rs 1.45 lakhs (nil) leaving a balance of Rs 4,719 (loss of Rs 13.04 lakhs) to be carried forward. In view of the better working results, the directors have proposed a dividend of 6 per cent, subject to tax. The ordinary dividend for the years 1967, 1968 and 1969 were skipped. The last dividend paid was 8 per cent for the year 1966.

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

TATA CHEMICALS LIMITED

THE WEEK'S PRICE RANGE

BOMBAY, April 21

Among companies, Sandoz has raised the equity dividend from 10 per cent to 11 per cent while the directors of Fit Tight Nuts have decided to seek permission for an 1:3 bonus issue. Currently Sandoz is quoted at Rs 21.24 and Fit Tight at Rs 367.50. Bayer hopes to do better and JK is entering the shipping line for which a new company may be floated. Cent has achieved satisfactory progress. Yet, good corporate results failed to influence the market as a whole. It is a characteristic of the market that sometimes it does not respond to the best of news. The impressive performance of Hindustan Aluminium was not reacted to with the warmth it deserved. The dividend is proposed to be raised from 10 per cent to 12.5 per cent, sanction is expected for an 1:4 bonus issue and a big expansion programme is underway, to be financed from internal resources and borrowings. The point with regard to Hindalco was that the reported power cut for six months until June would affect production. That was why investors were a bit hesitant.

The cash section was active and several scrip were steady despite the weakness of the forward section. Mico, Nagpal, Zuari and Indian Organic turned hesitant towards the close. United Commercial was concerned in some keen buying and the scrip was mentioned at around Rs 111 at the close. Sectionwise, there was nothing in particular. Century came in for scattered liquidation on reports that the board meeting had been postponed. Steels were quietly steady and engineering were dull.

Knowledgeable sources think that the market will move in a narrow range until the Budget, and operators would prefer to watch developments before making commitments in a big way. The general belief, however, is that the Budget will be good at least from the market's point of view.

Spot cotton declines further

BOMBAY, April 21

A further extension of the declining trend in prices was noticed in the cotton market during the past week. Buyers were scarce. Many of the spinners were experiencing difficulties in finding funds for financing purchase of cotton. The already falling trend in prices also acted as a deterrent. Reports from upcountry centres also indicated indifferent buying interest on the part of the spinners. There was an undercurrent of anxiety too among industry circles as to what eventual shape the Government's proposals to ensure augmented production of controlled varieties of cloth would take.

The following has been the trend of prices of some of the leading varieties:

(Rs per candy)

	For the week ended April 21	For the week ended April 14
Khandesh ..	2,200	2,300
Barar AK ..	2,100-2,300	2,100-2,350
Digvijay Dabhoi ..	2,881	2,950-3,000
Barar L 147 ..	2,500-2,600	2,600-2,700
Kalyan 797 ..	2,650	2,300-2,250
Manavadar CO2 ..	2,575	2,750

In the foreign section also, limited business was reported due to the non-availability of credit facilities. While there had been some reports of attempts at spurious sales of imported cotton, the actual deals have been few and far between. On the export front, Bengal Deshi attracted some attention, particularly from Japan. Raw cotton registered

for export as on April 14 is placed at 129,772 bales against 181,432 bales during the same date last year. Out of this the quantity passed for shipment was 91,135 bales against 126,190 bales for Bengal Deshi and 10,085 bales against 11,747 bales for miscellaneous fibres.

YARNS SUBDUED

BOMBAY, April 21

A subdued trend prevailed in the yarns market here during the past week. Art silk yarns continued to lose ground due to improved supplies from spinners and poor demand from upcountry centres. Staple fibre yarns also declined following the improvement in the local supplies. Cotton yarns were steady.

In the art silk yarns section, 150D National Rayon declined by 36 paise to Rs 16.53. 120D receded by a like amount to Rs 18.45. 150D Bright Century lost 35 paise to Rs 16.18 and 120D 37 paise to Rs 18.37. 100D Bright South India moved down by 40 paise to Rs 22.46. Staple fibre yarns (2 x 34 nF) spot Kiran shed 13 paise to Rs 11.44.

JUTE GOODS RECEDE

CALCUTTA, April 20

Profit-taking, coupled with the adverse statistical position, reduced the gains in jute goods last week. At the same time, the rising trend in raw jute was checked following arrivals on a large scale of fibre from East Bengal. The stocks of raw jute with East Bengal farmers on the West Bengal border are being readily bought. In the process the shortage of particular grades of fibre is no longer felt, although most of the arrivals are being cornered by strong hands. Reports indicated that this year's crop in East Bengal would be considerably less, since sowing work is taking place only slowly.

Shipments of jute goods and raw jute from East Bengal continue to be at a standstill, and a world-wide famine for raw jute and jute goods is now considered more than a possibility. Manufacturing countries depending on East Bengal raw jute would be disappointed, since even if fighting ends soon, there is no possibility of a crop of average size. In this background, India is wisely planning for an increased crop; the Indian Jute Development Council has fixed up the target at 8.4 million bales for this year, and the occurrence of good rains again last week has been a welcome development. Fibre arrivals last week aggregated 35,000 maunds per day, which were readily absorbed. Raw jute prices recorded a gain of a rupee per maund last week, with Assam bottoms at Rs 62, daissee bottoms at Rs 63, and northern bottoms at Rs 60.

The announcement of a rise in the stock of goods with mills at the end of March despite a decline in production in the month—stock at 95,000 tonnes rose by 1,300 tonnes but production at 83,700 tonnes was lower by 2,300 tonnes—served as a bearish factor encouraging bulls to book profits at the bulges in the past week. A neutralising factor was the loss of production in mills between April 13 and 16 because of the power cut in the Jagatdal, Barrackpore-Titagarh, and Hooghly-Rishra belts of the industry, which accounts for 43 per cent of productive capacity.

The absence of any worthwhile expansion in overseas business in the past week strengthened fears that unless the price trend was straightened, hope of increased exports was difficult to fulfil. If prices for jute goods in Calcutta rule higher as at present, this

would only encourage synthetics and substitutes. The rise in stock of goods is a powerful reminder in this regard. The expected emergence of near-famine conditions in the world market for jute goods and raw jute should stir the Indian industry to exploit fresh opportunities by following a reasonable price policy. In the last week, only scattered business took place with overseas countries. At one time, in the last week, hessian 40" 10 oz and B twills rose to Rs 101 and Rs 284, but profit-taking saw prices close at Rs 98.50 and Rs 278, respectively.

CAKES IN DEMAND

BOMBAY, April 21

A feature of trading in the oilseeds market during the past week was the revival of demand for groundnut extractions. It was said that in the past few days business to the tune of 90,000 tonnes was put through of which Russia was supposed to have accounted for 40,000 tonnes, the United Kingdom for 25,000 tonnes and Japan for 15,000 tonnes. Shippers however are not happy, for they fear a further increase in freight from July. All the same reports of inquiries will induce a steadying effect.

Groundnuts and groundnut oil, despite demand for extractions, were easy. This was due to the pressure of heavy arrivals and distress selling on the part of Saurashtra interests. At lower levels vataspali interests got themselves interested in the market but a redeeming factor will be reports indicating a shortfall in the summer crop output in the South.

The weak undertone in castor was due to selling pressure but market men think that overseas demand for castor oil would revive if the price here declines to around Rs 3,200 per tonne. Linseeds were weak in the absence of any price-making factors.

Comparative prices in rupees were:

Item	14.4.1971	21.4.1971
Castor April ..	136.50	131.50
Castor June ..	133.37	127.75
Linseeds April ..	162.00	157.50
Linseeds July ..	157.75	152.00
G. Nuts Khandesh ..	190.00	184.00
G. Nut oil ..	43.30	42.30
Castor Madras Small ..	148.00	140.00
Castor Comm. oil ..	32.75	32.00
Castor B.S.S. oil ..	35.25	34.50
Linseeds Bold ..	158.00	154.00
Linseed oil ..	36.50	35.50

TEA HARDENS

CALCUTTA, April 20

As the new season is rapidly coming into its stride, the demand is also picking up. The trade hopes that this year's exports would be higher than in 1970. In this context, last year's fiscal measures gave a boost. The industry has often pleaded for relief from excise duty at least on exports, and if the forthcoming Union Budget would only contain this measure, the trade's hopes for a substantial increase in exports in this year within the international quota would be fulfilled.

Leaf offerings during last week's export sale totalled 674 and 2,291 packages of new and old teas, respectively. There was good general demand, and prices generally hardened. All old season's teas were readily absorbed at firm to dearer prices. Among new season's teas, Doars CTCs and orthodox teas were sold well, with Darjeelings, especially the brighter lines, eliciting attention. No quotations were issued in view of the limited offerings.

Dusts on offer totalled 25,117 packages which also encountered strong general demand. Orthodox teas rose in value with leg-cuts following a similar trend. CTCs were subjected to keen competition and in the result prices gained. The quotations in rupees per kg inclusive of excise duty were: best Assam CTC dust Rs 7.20 to 8.10 (nominal), good Assam CTC dust 6.40 to 6.70, medium CTC dust 6 to 6.40, medium Assam

THE INDUSTRIAL COURT REPORTER

Started in January 1948, the *Industrial Court Reporter*, issued monthly, contains important orders and awards of the Industrial Court and Tribunals in Maharashtra State, as well as the selected decisions of the High Courts and the Supreme Court of India. The *Reporter* serves employers, employees, trade unions and lawyers in finding at one place the case law on industrial and labour matters.

- *Annual Subscription:* Rs. 15.
- *Back Copies:* If available, supplied at Rs. 18 per set.
- *Advertisement Rates:* Can be had on request.

All correspondence and remittances should be addressed to—

THE COMMISSIONER
OF LABOUR AND DIRECTOR OF
EMPLOYMENT,

Commerce Centre,
Tardeo, Bombay-34 WB (India)

dust 5.70 to 6.30, plain CTC dust 5.30 to 5.80, legg-cut dust 5.40 to 5.80, and plain orthodox dust 4.90 to 5.20.

FOODGRAINS STEADY

BOMBAY, April 20

During the past week, prices of foodgrains remained steady in the local foodgrains market. In coarse grains, the prices of bajra (Superior) at Rs 60-65 per quintal ruled steady. The demand was poor. The daily arrivals were satisfactory at around 700 bags. Also, maize at Rs 61-62 per quintal remained more or less unchanged. Activity was limited in maize. Among pulses, gram (Punjab) showed no change over the week and was quoted at Rs 80-81 per quintal. However, the undertone was weak. Activity as well as arrivals were good. Urad (Khandesh new) also remained stable at Rs 148-152 per quintal. Tur (Berar white) at Rs 110-112 per quintal remained generally steady. The demand was limited and the daily inflow at 350 bags was moderate. Moong (Chinal) also stayed at the previous week-end level of Rs 220-250 per quintal.

SUGAR EASY

BOMBAY, April 20

The prices of sugar (C-30) in the local sugar market declined by Rs 4-6 to Rs 190-192 per quintal, due to heavy arrivals in the market. The daily arrivals were about 700 bags against the offtake of about 500 bags. The current prices of sugar are higher by about Rs 7 than the level a year ago. Today, about 22,000 bags of 'D' grade sugar were disposed of by the co-operative sugar factories with ex-mill duty at Rs 182 per quintal. The Union Government issued today, an order for the release of higher sugar quotas of 2.65 lakh tonnes of levy sugar and 1.60 lakh tonnes for free sale.

SUGAR RECEDES

HAPUR, April 19

Sugar prices, after advancing by Rs 2 to Rs 5 per quintal due to good demand from Punjab, Rajasthan and some parts of UP advanced by Rs 2 to Rs 5 per quintal, later in the week eased as demand turned slack. The upward trend was attributed to rumours of likely increase in the levy sugar prices. Factories in this area were still attracting enough cane supplies but the percentage of recovery is reported to have fallen and some of the factories are likely to close by the end of the current month and some later in mid-May. Sugar in the open market is quoted at Rs 179 to Rs 195 per quintal according to quality and mill delivery prices of some of the factories at week-end were:—B 30 Jagdhari Mansurpur Rs 203, Iqbalpur Khatauli Rs 202.50, Daurala Shamli Rs 202, Mawana Rs 201.50, D 20 Amroha Rs 180, E 30 Bijonore Rs 177, E 20 Bulandshar Rs 180.50.

FOODGRAINS FALL

HAPUR, April 19

Easy trend prevailed in foodgrains during the past week. Harvesting of rabi grains, including wheat is in full swing. Due to rains in week-end threshing and winnowing operations are now being delayed. These rains have damaged the quality of rabi grains and has delayed threshing operations.

Wheat prices sagged to be quoted now at Rs 75 to Rs 77.50 a quintal for average and Rs 82.50 to Rs 85 for superior farm and Rs 70 for red mexican variety. The daily arrivals of new wheat which had mounted to an average of 1,000 maunds up to mid-session shrunk low later due to recent rains. Old superior farm variety however was quoted higher up to Rs 87.50 to Rs 95 a quintal as arrivals were sparse and consumers were ready buyers. Rice prices however were steady due to poor supply position in the face of increasing seasonal demand.

METALS BUOYANT

CALCUTTA, April 20

The tempo of increased activity in the base metal market was maintained during the

past week, following good demand from industrial quarters. Prices ruled buoyant. Increased Chinese offtake of copper from world markets, the growing possibility of a virtual industry-wide copper strike in the US from June 30 for increased wages, the unlikelihood of Chilean output in this year even reaching last year's level of 685,000 tonnes, lent strength to world markets. On the London Metal Exchange, copper wire-bars maintained the buoyancy reflecting the decreasing level of stock but in the middle of the last week reacted to £524 a tonne as against the earlier level of £532. In Calcutta, the import policy scheduled to be announced on May 1 was keenly awaited, and it was hoped that it would provide for increased imports of copper and zinc, though fears of an increase in excise duty in non-ferrous semis were entertained.

The Minerals and Metals Trading Corporation was in the meantime reported exploring the possibility of importing copper on a long-term basis. Industrial demand for wire bar was good, and prices for scrap were fully steady—utensil scrap at Rs 1,390 and clean wire-scrap at Rs 1,430 per 100 kg. Tin was unchanged at Rs 4,800; the comfortable stock position coupled with the report that the MMTC proposed to import Rs 75 lakhs worth of Straits tin lulled buyers' enthusiasm. Zinc electro ingots were firm at Rs 448, and with good demand from the galvanising industry scrap prices were maintained. There was some fall in supplies effected by the MMTC. Virgin lead was firmly quoted at Rs 440 and maintained at this level despite the report of imminent imports valued Rs 50 lakhs.

KIPS QUIET

MADRAS, April 17

The tempo and style of demand from overseas buyers remained unchanged during the past week. Importers were not willing to increase their buying limits and shippers here were not inclined to book fresh business in view of their forward commitments. There was good demand for superfine marks in goat skins but the availability of stocks was poor. Exceedingly good demand was in evidence for prime sheep skins.

BULLION DIVERGENT

BOMBAY, April 21

A divergent trend characterised trading in the bullion market during the past week. Silver which reached dizzy heights last week lost ground during the week following increased arrivals and less offtake from up-country centres. The weak overseas sentiment also imparted weakness. Gold however moved up due to slack arrivals and improved demand from the south. The increased vigilance of the customs officials also aided the sentiment. Sovereign was fully maintained.

Silver (.996 fineness) commenced trading Rs 1.50 higher at Rs 608.50 but declined in the following session. It lost further ground in the subsequent sessions and closed at Rs 604.50 today, the net loss over the week being Rs 3. The weekly delivery was mentioned at between Rs 606 and Rs 599. The average weekly arrivals and offtake of silver aggregated 53 bars and 43 bars, respectively.

Primary gold in unofficial trading began Rs 3.50 higher at Rs 185 but declined in the following session but recovered later. It closed the week higher at Rs 187.50 today, with a net gain of Rs 5 over the week. Standard gold in official trading opened Rs 2 higher at Rs 196 and improved in the subsequent sessions to close the week higher at Rs 197 today, the net gain over the week being Rs 3. Sovereign was fully maintained at Rs 174.

INTEREST RATES FALL

BOMBAY, April 21

Comfortable conditions prevailed in Bombay's short-term money market in the past week. The call rate came down to 7½ per cent from 10 per cent in the previous

week. In Calcutta, renewals were effected at 6 per cent.

Ninety-one days' Government of India treasury bills sold from April 12 to 17 amounted to Rs 28.17 crores against Rs 22.02 crores in the previous week.

During the week ended April 9, foreign exchange reserves of the Reserve Bank of India increased by Rs 4.11 crores to Rs 356.76 crores. While foreign securities rose by Rs 5 crores to Rs 273.42 crores, balances held abroad came down by Rs 0.89 crore to Rs 83.34 crores. Notes in circulation expanded by Rs 107.54 crores to Rs 4,360.99 crores. Deposits of scheduled commercial banks with the Reserve Bank of India declined to Rs 190.75 crores from Rs 217.95 crores.

Week ended April 9 recorded a rise of Rs 45.53 crores at Rs 4,740.44 crores in the total credit made available by scheduled commercial banks. Aggregate deposits expanded to Rs 5,933.69 crores from Rs 5,901.14 crores. Borrowings from Reserve Bank were lower at Rs 270.26 crores (Rs 356.11 crores). Total cash stood higher at Rs 379.23 crores (Rs 369.97 crores).

In the gilt-edged market, gold bonds 1980 gained Rs 4 at Rs 116. In the State loans section, 4½ per cent 1974 Kerala gained Re 1.25 at Rs 99.

Notices

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

THE BOARD OF DIRECTORS HAS sanctioned payment of dividend on 5 per cent Cumulative Preference Shares in the Company for the half-year ending 31st March, 1971. The Register of Members for Preference Shares will remain closed from 23rd April to 30th April, 1971 both days inclusive for payment of dividend on or after the 1st May, 1971 to those Preference Shareholders whose names appear on the Register on 30th April, 1971.

By Order of the Board
THE INDIAN IRON & STEEL Co. Ltd
BIREN MOOKERJEE
Chairman.

Registered Office:

12, MISSION ROW,
CALCUTTA-1.

SOURCE : Unstarred question No. 218, Lok Sabha, April 2, 1971.

NOTES : (a) Appreciable increases in production rate in most units is likely in the last quarter of the year.

(b) Up to September 1970 only.

(c) Up to June 1970 only.

(d) Capacity increased from 850 tonnes/yr to 980 tonnes/yr (1st phase expansion completed).

(e) Percentage based on present capacity of 1,36,500 tonnes per year.

(f) Target for 1970-71 4.07 m. tonnes, 1969-70 3.54 m. tonnes.

(g) Percentage assessed on target basis.

How Tatas help you all the time to live better

Sometimes it is interesting to take a look at things — a new sort of look, that makes you see them differently. For instance, look at the things around you that work by electricity.

The ceiling fan that keeps you cool... the street lamp just outside that guides you safely home at night... the mill that makes the cloth you wear... the radio that keeps you in touch with the world.

You can easily think of more things. But you will agree, life would have been dull and difficult without them... without electricity.

For half a century Tatas have been serving you and industry with this low-cost power. And every time you press a switch...

Someone at Tatas is working for you

A jute goods shortage?

ARE we in for a shortage of jute goods in the near future? Against the background of falling exports and the claim of the industry of over-capacity in the Calcutta region, as evidenced by the closure of about 12 units, such an assumption would seem to be far-fetched. In fact, industry spokesmen have in recent years been repeatedly talking about the bleak future of this most important foreign exchange-earner and have expressed their dismay at the Government's proposal for the setting up of new jute mills outside West Bengal. Obviously, the Government does not agree with this assessment, and the Minister of Foreign Trade, Mr L. N. Mishra, on the other hand, has a complaint that the industry is not preparing itself to meet the growing demand for jute goods in the coming years. At the recent annual meeting of the Indian Jute Mills Association (IJMA) he urged the industry "not to be swayed by the passing currents of pessimism and to assess correctly the prospects before the industry both in the immediate and the distant future".

Interestingly enough, there is not much of divergence in the estimates of the Government and the industry on the future domestic needs. Also, there is unanimity on the necessity of maximising exports of jute goods. The Government does not dispute that exports have shown a consistent decline—the figures of shipments of 5.39 lakh tonnes in 1970 compared to 9.29 lakh tonnes in 1965 speak for themselves. But Mr Mishra thought it fit to give expression to the Government's oft-repeated view that the decline in the jute industry's production (which, in his opinion, is the main factor behind the

export setback) is partly due to a fall in the machine efficiency because of wear and tear and that the mills which had closed down, were those with such outdated machinery that even in normal times they could not work economically. The Government also feels that despite the competition from synthetics, there is considerable growth potential in carpet backing demand, in some areas of consumption jute still has functional superiority and the prospects of developing new uses of jute such as decoratives and furnishings are good. There is also every possibility, in its opinion, of a rapid increase in the offtake in industrial countries such as the USSR. On the domestic front the packing requirements of the country may go up to 11.8 lakh tonnes by 1980-81 as against the current level of 5.28 lakh tonnes. And Mr Mishra was also quick to point out that on the projection of a 7 per cent increase in domestic consumption made by the industry and to which the Chairman of the Association, Mr H. D. Wahi, had referred, the figure for the likely demand for 1980-81 would come to 10.4 lakh tonnes. But given the present pattern of product-mix it is unlikely that the mills will be able to produce more than 12 to 12.5 lakh tonnes of jute goods out of the present installed capacity. A jute goods shortage could thus develop unless mills undertook a substantial modernisation and expansion programme to take care of the growing demand for jute goods within the country as well as cater to the export demand better.

The industry, on its part, has sought to give an answer by referring to shrinking overseas markets, rising costs, a serious shortage of

working funds, and, of course, labour indiscipline. Mr Wahi has also referred to the inadequate production of jute and the need for speedily inducing jute growers to take to intensive cultivation on scientific lines. These difficulties faced by the industry cannot be denied, but they by themselves do not answer the Government's criticism that the mills have not been availing themselves of the financial help they have already been offered to undertake a worthwhile modernisation programme. Loans from financial institutions have been promised. New Delhi has also gone to the extent of assuring the industry that should the indigenous makers of equipment fail to deliver machinery in time, imports in all necessary cases would be allowed. Mr Mishra has, however, found that the industry has been largely unresponsive to this offer of help, and he sees, therefore, no other way of averting a serious shortage of jute goods in the near future than of licensing new units in some States outside West Bengal.

On the face of it, therefore, it would look that the industry is taking a very short-sighted view of the calls that would be made on it. The sharp fall in exports which in 1970 were at an all-time low seems to have completely unnerved it. So much so, instead of talking in terms of increased production to avail itself of the possible opportunities created by the civil war in East Bengal, it is more keen to take advantage of the situation by increasing the prices of some goods. New Delhi is right in opposing this proposal for it would be most unwise to bank on a sellers' market that could be there for some time, to plan the future of the jute industry. An industry threatened by synthetics cannot itself initiate an action that could well give a greater boost to synthetics and price out jute goods from some markets. The fact that there has not been much of diversion of orders to Calcutta from Bangla Desh is itself significant. Foreign buyers would appear to calculate that the difficulties of obtaining jute goods from Bangla Desh would be resolved soon, and, in any case, they would not like to create conditions in which prices of jute goods would shoot up, and thereby reducing their competitiveness with synthetics. It is a hint which our jute goods industry can profitably take. The damage done to the jute industry in Bangla Desh because of the fighting there, however, promises to give a breathing time to our industry. It is important that it utilises this opportunity to go ahead with modernisation and expansion of capacity with the help promised by the Government. There is no reason why it should shy away from this, particularly when it believes that the Jute Corporation will help stabilise jute prices and improve crop productivity.

Lip-service to land reforms

THOSE familiar with the power structure in rural areas and with implementation of land laws do not need to be reminded of Wolf Ladejinsky's findings last year that security of tenure is not given to the many, that rents are exorbitant and that ceilings on land ownership are notional. He summed up by saying that economic interest and social justice for the village poor had not gone hand in hand in the past twenty years. When the Chief Ministers met last September to discuss land reforms, therefore, the agenda before them made no bones about the two programmes which needed to be given "overriding priority in the present context". These were conferment of ownership rights on tenants and revision of ceiling provisions and their strict enforcement. As the data then presented to the Chief Ministers show, ceiling limits remain high in most of the States. For irrigated lands, the ceiling on existing holdings is in most States around 50 acres. In the non-irrigated areas, ownership of as much as 336 acres is permissible. Since the ceiling provisions affect an extremely small proportion of the rural community adversely, the Chief Ministers decided on balance in favour of conferring benefits on those who are landless or lack viable holdings.

Chief Ministers also noticed that there were large tracts of land vesting in the State in addition to Government wastelands. Little effort had been made to ensure that such land was allotted only to

the landless and to genuine agriculturists who own fewer than three acres. Another field of State competence, where the Chief Ministers found progress halting if not absent, was the distribution of lands benefiting from major and medium irrigation projects. Government has spent hundreds of crores of rupees on irrigation. It is essential both in order to raise production substantially and to ensure social justice that the benefits from these projects should flow to the largest possible number of families. As the allotments of land in the Rajasthan canal area indicate, however, developed land has not gone to the landless or small holders, and not even to those who lost their farms because of the construction of dams at Bhakra and Pong; land has been instead allotted to those from within Rajasthan who had the necessary pull with politicians and revenue officials. Apart from bringing virgin land under irrigation, Government is taking concerted steps to develop roads, marketing centres and warehousing and to supply of credit in areas benefiting from the major irrigation projects. Its intentions about linking land distribution policy with social justice are being tested in the command areas of major irrigation projects and have so far been found sadly hypocritical.

While paying lip-service to land reforms, therefore, the actual policy favours landed interests. What makes this policy socially dangerous is the explosive situation created by the green revolution. As the Prime Minister told Chief Ministers last year, the green revolution might not remain green unless it was accompanied by revolution based on social justice. She commended to them land reforms as "no single programme so intimately affects so many millions of our people". Now that green revolution land is becoming more prized socially and economically, landlords who adopt the new farm practices have been seeking unrestricted land control. Illegal as they are under the law, rents have risen from the traditional 50 per cent to 70 per cent of the crop. Owners have been getting rid of tenants altogether. Law has aided and abetted them in resuming land for self-cultivation. One-time tenants are being reduced to share-croppers and numbers of the landless have been growing. It is hardly surprising that last year there were reports almost every day of incidents of forcible occupation of land—both by the landed and by the landless. This is the foretaste of the law-and-order problem which must destroy social peace unless energetic steps are taken towards a more equitable distribution of land which is the most important means of production in the rural areas.

Yet, at the first meeting of the Central Land Reforms Committee last week, Mr Fakhruddin Ali Ahmed showed no sign of urgency. There is no obstacle to prevent State Governments from adapting the West Bengal or Kerala ceiling laws to the conditions of their own State. This, however, has not been recommended by the Committee. It has been suggested instead that more facts should be collected on the provisions of ceiling laws and their implementation before the Committee meets again in June. In view of the obvious reluctance of the political members—Central and State Ministers—to make any forward move, a rehash of available data is only a time-consuming device. Enough is known of the fate of ceiling laws and how they have been ignored or circumvented. It is not necessary to have any further detailed studies on the classes of land before an essential degree of uniformity in ceilings can be brought about by fixing them on a family basis and lowering the level where it is high—as it now is in Andhra Pradesh, Assam, Bihar, Madhya Pradesh, Maharashtra, Mysore, Orissa and Rajasthan.

Closely linked with the imposition of ceilings is the evolution of policy regarding the small holders. Obviously there is no social gain if the break-up of a large and efficiently managed farm leads to the inefficient management of smaller farms into which it is parcelled out. Redistribution of surplus land must, therefore, be viewed as a step towards consolidation of land holdings and reorganisation of farming operations. Surplus lands must be allotted in compact blocks. Detailed production programmes must be worked out for the new allottees who have small holdings in contiguous areas. In the States where the political influence of the landed interests has not bedevilled the operation of ceiling laws, greater energy needs to be shown in implementing existing legislation in letter and spirit.

INDIA-CHINA TRADE

Let's keep the powder dry

By Vadilal Dagli

THE secret visit to the Canton Fair on April 15 by the Indian Commissioner to Hongkong, Mr V. Siddharthachary, on the eve of his transfer to New Delhi, was a minor yet significant step towards normalising trade relations between India and Communist China. Since the Sino-Indian conflict in 1962 the trade between the two most populous countries of the world has been paralysed. During the past one year or so informal contacts were, however, being developed between Indian officials in Hongkong and Chinese trade representatives who, all of a sudden, began to invite Indian diplomats to their parties. The Chinese trade leaders also attended the official functions of the Indian Commission. These contacts which were initially hesitant increasingly became less unfriendly, particularly because of the acute cold war between the Soviet Union and China and the Chinese concern for broadening their foreign trade base which is perilously narrow.

The disruption of political and economic ties with the Soviet Union which was almost complete in the mid-sixties, convinced China that it was dangerous to rely on one or two dominant trading partners who could paralyse the economy of a weaker partner. The Chinese claim that the Soviet Union did exactly this and disrupted their economy by withdrawing all of a sudden all technical and economic assistance. Another lesson the Chinese learned during the sixties was that it is not wise to mix politics with trade. Except in relation to Japan which is a special case, the Chinese became exceedingly pragmatic in their trade relations with the non-communist world. Despite the fact that Peking had no diplomatic relations with Bonn, West Germany became a leading trading partner. China also did not mind buying wheat and steel from Australia at a time when Australian troops were actively assisting "the imperialist US forces" in Viet Nam.

I think that it is in the context of this new trade policy of China that one can explain the thaw between Indian officials and Chinese trade representatives in Hongkong. I was more convinced about the shift during a rather leisurely chat with Mr K. C. Wang, Chairman of the pro-communist Chinese General Chamber of Commerce, on my recent visit to Hongkong. Mr Wang, who himself is a millionaire and dresses like one, represents China in Hongkong in so far as her trade relations are concerned. He discusses foreign affairs in perfect Maoist jargon. He can be amiable, too, as I found him in my rather frank discussions with him.

Mr Wang, who is also Communist China's reliable contact man in Hongkong with the outside world, repeated this observation several times during our discussions on India-China relations: "One who untied the knot should tie it." When I asked him what should be done if there was a dispute about who actually untied the knot, he repudiated the suggestion that China invaded India. "If we had invaded India why should we send back the wounded prisoners of war after giving

them medical treatment? We even repaired your trucks and sent them back to you," Mr Wang claimed. But when discussions were becoming a little surcharged with emotion he indicated that both countries should forget the past. "We must realise that India and China are two leading countries of Asia. They should be on friendly terms with each other, but this can happen if we learn to distinguish between right and wrong."

"How to do it? It is rather a difficult problem," I said.

"It is not difficult at all. What is right? Right means anti-imperialist and pro-oppressed. There are two imperialist systems in the world—American imperialism and Socialist imperialism of the Soviet Union. You cannot be right if you are friendly with any of these two imperialist powers. India cannot be right when she is friendly with the socialist imperialism of the Soviet Union," Mr Wang said.

When I asked him about India's position in the scale of China's unfriendliness, Mr Wang said: "American imperialism and Socialist imperialism are our two main enemies. India is different. You are not an imperialist power."

For Mr Wang the world was divided into two camps. On one side were American imperialists and Socialist imperialists while, on the other, was the rest of mankind.

When I told him that the Soviet Union had also given us aid along with other friendly countries, he asked: "Is Russian aid really aid? You must know what aid is from the aid we give to African countries. No string is attached, no big power chauvinism. You must learn from our experience with the Soviet Union. The Soviet Union is helping you now. If India trades with China, her attitude will change."

When I pressed him about the process of normalisation of trade relations between India and China, he said that it was good that we had still diplomatic ties. He hinted that ambassadors should be exchanged. But he also said that normalisation could take place only when India distinguishes clearly between what is right and what is wrong.

Behind the mask of Maoist jargon I found inclinations, although hesitant, for moving towards normalisation of trade relations with India. China has launched a probing operation. The invitation to Mr Siddharthachary to visit the Canton Fair (you can't visit the Canton Fair without an invitation, and when I was in Hongkong in the middle of last month I was told that several American businessmen were waiting for invitations to this Fair) was part of this probing operation.

What are the possibilities of reviving trade with China? I think in the near future these possibilities are not very bright but in dealing with so resilient a power like China we should keep our powder dry. It is in this context that I enquired from various sources in Hong-

kong about the possible composition of India-China trade. Even in the days of Hindi-Chini bhai-bhai our trade with China was not very significant. In 1953, the total volume of trade between the two countries amounted to only Rs 18 million. In 1959 it reached the peak and the total volume of trade rose to over Rs 120 million. In that year our exports to China amounted to Rs 75 million and imports totalled about Rs 49 million. Even during this peak period our exports to China were a little less than 1 per cent of our total exports during that year and our imports from China were less than 0.5 per cent of our total import bill.

But during the intervening period there has been structural as well as geographical changes in China's trade. In the fifties nearly two-thirds of China's trade was with the communist bloc and the remaining one-third with non-communist countries. Today China's trade with non-communist countries amounts to 82 per cent while the share of the communist countries is only 18 per cent. The Soviet Union which was China's principal trading partner has been replaced by Japan which exported to China in 1969 goods worth \$391 million. West Germany (\$151 million), the UK (\$124 million), Australia (\$117 million) and Canada (\$114 million) were other major trading partners of Communist China for whose markets the Nixon Administration has now made an unorthodox bid.

What could China buy from India? When we had normal trade with China we exported jute sacking bags, hessian cloth, cotton, tobacco, black pepper, shellac, chrome ore, sandalwood oil, sugar and machine tools. We imported from China soda ash, caustic soda, raw silk, newsprint, drugs, iron and steel manufactures.

At present some unofficial trade is going on in some small quantities in mica and jute which pass through Nepal, Hongkong and Western Europe. In view of the widespread structural changes in the economies of both India and China in the intervening period, the trade pattern may undergo some change. Among the items that China might like to buy from India are aluminium ingots, scientific instruments, light machine tools, textile machinery, mining machinery, transport equipment, power equipment, jute and Indian herbs for its export-oriented indigenous pharmaceutical industry. She might be prepared to release goods such as tungsten, mercury, rice, vegetable oils and newsprint. As regards light engineering goods India can compete with other industrialised suppliers of China, especially in the matter of light machine tools, mining machinery and textile machinery where excess capacities exist.

There is also a likelihood of China buying from us some vital consumer goods. It was reported recently that there were shortages of matches in rural areas of North China. Last December, the inhabitants of the city of Canton experienced great difficulties in obtaining electric bulbs. These stray instances would indicate the possibilities of locating the outlets for some of our consumer goods in the limitless market that is China.

As one student of China in Hongkong told me, "when your relations with China would normalise, trading will take place not between two agricultural countries but two developing industrial societies". □

MARKET GOSSIP

Another bank merger

THE shares of both Bank of Baroda Ltd and the Tata Chemicals had been considerably active in the past few days. The market had obviously sensed the coming merger of the Bank of Baroda Ltd with Tata Chemicals and had apparently calculated that this merger would be to the benefit of the two. On Tuesday, Tata Chemicals closed firm at Rs 32.50 gaining more than three points during the course of the day and shares of Bank of Baroda Ltd moved up by four points to Rs 122. The merger scheme was approved by the boards of directors of the two companies on Wednesday. The scheme will be implemented after the approval by the members of the two companies at meetings to be called under the directions of the High Court. Under the terms of the proposed amalgamation a holder of every five shares of the Bank of Baroda Ltd will receive (a) nine ordinary shares of Rs 10 each of Tata Chemicals and (b) five 8 per cent debentures of Rs 100 each of Tata Chemicals (secured by floating charge and redeemable at par at the end of 12 years). Those shareholders of the Bank of Baroda Ltd who do not wish to accept the scheme of amalgamation will be entitled to opt for payment in cash at the rate of Rs 135 per share of the Bank of Baroda Ltd.

The bank received a total compensation of Rs 8.40 crores following nationalisation. Tata Chemicals has a major expansion programme in view and it is also awaiting clearance from the Government for its proposed Rs 50-crore fertiliser project at Mithapur. Additional resources provided by the shareholders of the Bank of Baroda Ltd would help Tata Chemicals in this expansion. □

New import policy

THE import policy of the Government has assumed in the past two or three years far more significance than in the past. For one it no longer has the character of just an import policy. It is more of a foreign trade policy that seeks to provide some answers as to how imports are to be geared for increased production to create more exportable surpluses. It is also important because of the faith that the Government is increasingly placing in State trading. It is, therefore, not surprising that at mid-week there should have been considerable speculation as to what the new import policy, about to be announced, will hold.

The import policy for 1971-72 is sure to reflect the Government's determination to fulfil its election pledges. In the sphere of trade an important commitment of the Government is to increasingly canalise imports through State agencies. Already 70 per cent of the import trade is handled either directly by the Government or its agencies. The new import policy will provide for a further increase in the State's share of imports. It is reported that among the items listed for canalisation

this year are some chemicals, drugs and raw materials and metals.

In pursuance of its promise to encourage the small man in the business field the Government may announce in the import policy some additional facilities or incentives for entrepreneur importers in the small-scale sector. Similarly the weaker sections of the community and the handicapped are likely to benefit from the policy. This may be sought to be done through liberal import of hospital equipment, gadgets for the deaf and dumb, books and the like.

Since it is admitted on all hands that the solution to the economic problems facing the country lies in increased production, the import policy will be so designed as to make it a major instrument for stimulating production. In other words, liberalisation of the import of items needed for fuller utilisation of capacity in certain industries is very much on the cards. Further, the comfortable external reserves position of the Government is a factor in favour of liberalisation. It is, however, certain that in trying to meet the import requirements of industries the new policy will give preference to those engaged in exports. In fact, the objective of increased production is not only to meet the growing internal demand but also to step up exports substantially. The prospects in this regard are indeed very bright. For instance, India can make good the large gap that will occur in the world supply of jute goods because of the calamitous happenings in East Bengal which have practically crippled Pakistan's jute industry. The import policy, therefore, is likely to give special attention to the needs of the jute industry with a view to maximising its exports and encouraging it to expand quickly.

A distinctive feature of the new policy will be greater integration of imports with exports. In order to carry this process further barter deals on an increasing scale are expected to be put through in future. Under the policy the class of established importers will further diminish. So long as the bulk of the import trade was handled by them the red book published by the Government annually had some relevance. But has it now when imports, by and large, are allowed to actual users? □

IOB Ltd collects surplus

THE amount of Rs 10 lakhs recently paid by the Government to the Indian Overseas Bank Ltd is no extra compensation because of the takeover in July 1969. Official sources point out that under the nationalisation law branches in Malaysia of the three erstwhile banking companies—the Indian Overseas Bank Ltd, the United Commercial Bank Ltd and the Indian Bank Ltd—were not nationalised. What had happened was the Malaysian branches of these banks were being managed since July 1969

by the concerned nationalised banks as agents of the erstwhile banking companies. And so the "surplus" which would include profits and some other items, would have to be paid to the erstwhile banking companies assuming, of course, the operations of these branches did result in a surplus. In the case of the Indian Overseas Bank Ltd this surplus was estimated at Rs 10 lakhs after a valuation of the business done in its five Malaysian branches and this has now been paid. Valuation of the business of the three branches of the United Commercial Bank Ltd and five of the Indian Bank Limited is reportedly completed and these are now being discussed with the erstwhile banking companies for payment of any surplus if due.

Meanwhile, the Government is finalising a new set-up for all these Malaysian branches of the nationalised banks. A company will be registered in Malaysia in which the three concerned new nationalised banks would hold one-third of the share capital, which means they would be major, but not majority, shareholders. The rest of the capital would be subscribed by Malaysians and Indians residing in that country. Such a set-up would conform to the Malaysian laws which do not permit the functioning of foreign government-owned banks in the territory. □

Search for cheaper cloth

NEW Delhi reports suggest that no solution has yet been found for increased production of controlled varieties of cloth and that the Foreign Trade Minister, Mr L. N. Mishra, would perhaps have to take a decision himself. The special committee appointed to study the problem of a change in the production pattern has reportedly submitted its report. Although details have yet to be made public, informed sources claim that the committee has underscored the need for extreme caution and a policy of hastening slowly in regard to the changes contemplated.

The private sector would appear to feel that the lead should come from the units run by the National Textile Corporation and other Government-run mills since the Government is now the biggest millowner. It would be easy for the Government in their case to provide for some sort of built-in subsidy for the production of controlled varieties whose sale at the currently fixed price is uneconomic. Meanwhile, it is being said that the possibility of introducing differentials in the penalty for non-fulfilment of obligation to produce controlled varieties cannot be ruled out. Some of the mills, which are admittedly better off, may be called upon to pay a higher penalty if they do not want to go in for the production of Janata cloth so that the burden on the marginal mills could be lightened to some extent. □

SURVEY

THE IDLE COTTON SPINDLES

THE cotton textile industry produced more yarn and more cloth during 1970 than in 1969 despite the difficult supply position of cotton. In fact, the output of yarn at 969 million kg was the highest during the past decade though cloth production at 4,182 million metres was lower than that of 4,701 million metres in 1961. Obviously, more spindles and looms were at work last year than in 1969. But with all that, according to Mr Chandrakant M. Khatau, Chairman of the Millowners' Association, Bombay, about four million of the 1784 million spindles installed were idle because of non-profitability of production due to high prices of cotton. Mr Khatau has suggested that it would be better to put to effective utilisation these idle spindles rather than add new spindleage, and has argued that this could be done by allowing inter-mill sales of spindles so that mills which are in a position to enlarge their capacity could do so out of the idle spindles. This is actually an invitation to the Government to take a fresh look at its licensing policy with regard to textile mills and not to allow consideration of concentration of economic power to dominate it. Presumably, it is also Mr Khatau's case that better utilisation of the existing capacity would mean better use of resources and possibly more employment too.

But Mr Khatau has not made clear how many of the four million spindles could actually be put to use since many of them must have been worn out. This issue is all the more relevant in the context of Mr Khatau's plea that the cotton textile industry must modernise itself fast if cost reduction is to be achieved and we are to maintain and improve our exports in difficult markets. He has pointed out that a committee set up by the Government has already submitted a report on the question of import of sophisticated machinery for the modernisation of the industry and has pleaded that the Government should take a speedy decision on it. Nevertheless, there is justification in the suggestion that before more spindles are added, the existing ones should be put to full utilisation. This becomes all the more important when we know that there is not enough of cotton to go round and that supplies of raw materials limit the production of blended and mixed fabrics. It is not as if cotton production cannot be increased, but, unfortunately, the half-hearted efforts put in by the Central and State Governments as also by the industry have not yielded encouraging results so far. It is also possible to increase the output of mixed and blended fabrics if the Government decides to be liberal in its licensing policy. It would be right in attaching to such licences a condition that the entrepreneurs must earn all their foreign exchange for raw materials through exports of finished goods. The Government, however, will never succeed in ensuring adequate and cheaper cloth to all the sections of the community unless it helps create conditions for increased production of cotton, mixed and blended fabrics. □

BITTER DRUGS

IT is the normal function of a representative organisation of an industry to put forth its members' difficulties. And this the Organisation of Pharmaceutical Producers of India has done ably through its President, Brig B. S. Bhagat, at its recent annual meeting. He has highlighted the confusion caused in the drug industry and trade by a series of amendments and clarifications issued to the Drugs Price Control Order, which resulted in at least four million copies of price lists being issued by the industry. Brig Bhagat has gone further to hint that this Order will have serious consequences for the future growth of the industry which may find itself short of resources to undertake the task of meeting the demand for drugs which is expected to rise at an approximate rate of 15 per cent per annum. But it is good that he has sought to provide a cover for himself by saying that the full effects of the Order on the financial results of the companies could only become evident after they have operated for a full financial year under the current provisions of the Order. Otherwise, the recent announcements of dividends and bonus issues by some of the pharmaceutical companies would have seemed to be pointing in the other direction of the Order not having made any particular difference to the fortunes of the pharmaceutical industry. In fact, the public at least does not believe that the Government has made a success with its Price Control Order and, on the other hand, is convinced that the rationalisation in the price structure sought to be achieved has been more to the benefit of the industry than to that of the public.

It is time that the pharmaceutical industry stopped making a grouse about the Price Control Order and instead concentrated its efforts on cost reduction. It is true it is handicapped here by the rise in the cost of ingredients and scarcity of raw materials of the right specifications. The pool pricing scheme may also be working to its disadvantage and the implementation of the industrial licensing policy may be confused. These difficulties should not be minimised, but they will not be solved by the constant harping of the industry on the theme that its profits are being cut down by Governmental action. On the other hand, this complaint, repeated on every possible occasion, is projecting a bad image of the industry before the public. It must learn to live with controls while, at the same time, impressing on the Government that the expansion of its capacity is imperative if for no other reason than that of meeting the growing demand for drugs. It is in the economies of scale that it must seek a solution to meet its social obligation to the community to provide drugs at prices which a developing country can bear and an adequate return for itself to keep on growing. If there is a lack of atmosphere of mutual trust and confidence to which Brig Bhagat has referred, let it not be overlooked that in part the industry is responsible for it. □

FREIGHT EXPLOSION

ANOTHER freight rise on the important trade route of India-UK-Continent is now in the offing. The discussions between a delegation of the India-Pakistan-UK-Continent Conference (Karmahom) and shippers in this country have had a good result in that Karmahom has agreed not to raise the freight rate on oilcakes which bring us sizable foreign exchange. It is also possible that the next hike in freight will be in August, instead of in June, and also not of the order of 15 per cent as earlier contemplated. But a rise of 7½ per cent to 10 per cent looks unavoidable.

The discussions last week were notable for one factor. There was no confrontation between the representatives of the shipping lines and of the shippers as has been the case in the past. The Chairman of the All-India Shippers' Council, Mr L. N. Birla, himself did concede that the liner conferences were faced with higher operational costs. And he even agreed that, as a special case, there could be a general increase in freight rates of 7½ to 10 per cent. This accommodating spirit should be reciprocated by Karmahom. The leader of the Karmahom delegation, Mr L. G. Hudson, has expressed inability to give a guarantee sought by Mr Birla that there would be no further increase during the next two years. This is rather unfortunate. But the other suggestions made by Mr Birla are such as could be agreed to by Karmahom. These include that commodities which were facing severe competition and new and promotional items of India's exports be exempted from the freight increase, no commodity be subjected to a higher increase than the general increase, the London surcharge be abolished, the Suez surcharge be reduced and the conference provide adequate shipping services. It is the last point which needs to be emphasised. The shippers have the right to expect that the conference lines would provide adequate shipping space, whenever needed, in return for the higher charges that would be recovered from them for the transport of goods. Unfortunately shipping services have in the recent past been far from satisfactory and this has, on several occasions, held up our exports. Even while conceding that liner shipping is not as profitable as in the past, it cannot be overlooked that one of the major declared objectives of conferences has been to provide adequate services. □

PROP FOR BACKWARD AREAS

THE Government of India is rightly seized of the problem of reducing economic disparities among the various areas of the country. This is an issue which is exercising the mind of the people in industrially backward areas. The Government has already announced some time back a subsidy payable to existing units in the backward areas if they undertook the programme of expansion or diversification leading to an increase in production by at least 25 per cent of the average annual output. It has now decided to offer a subsidy to the extent of 50 per cent of the transport cost of both the raw materials

and finished products. This subsidy will be available to all new industrial units to be set up in industrially backward areas. This scheme is made applicable to Jammu and Kashmir, Assam, Meghalaya, Nagaland and Tripura and the Union Territories of NEFA and Manipur. From the list of the States and Union Territories to be covered by this scheme it is clear that the Union Government wants industries to be established in our northern and eastern areas. Apart from the economic advantage, the scheme will help in inducing small entrepreneurs to set up units and thus attract larger population to these regions which are at the moment sparsely populated. The road system in these areas is now fairly developed and motorised transport could easily operate on these roads. While they were constructed primarily for security purposes, they can now also offer economic advantages to these areas. □

GOOD-BYE TO PROHIBITION ?

TWO pre-poll decisions of the DMK Government, namely the implementation of the Second State Pay Commission's recommendations and the abolition of the basic tax on wet lands in five-acre and smaller holdings, were expected to cost the exchequer as much as Rs 25 crores a year. It was then thought likely that, after the election, the Government would scrap prohibition to make good this amount. The first shot in this direction was fired recently by the DMK General Council by a resolution which called for re-examining the desirability of continuing prohibition. The resolution also said: "Apart from not heeding the repeated appeals of the State Government that the prohibition policy should be taken up at the Central level, the Government of India has failed to come to the rescue of the State by providing special funds to meet the loss of revenue on account of prohibition." The DMK General Council's resort to the tortuous course of justifying the scrapping of prohibition—a policy generally liked by women—is in tune with its familiar strategy of blaming the Centre for everything. In view of the improbability of the Centre compensating the State for the entire loss of excise revenue, prohibition is not likely to be in force in Tamil Nadu much longer. □

STATE BUDGET

Himachal Pradesh

THE Finance Minister of Himachal Pradesh, Mr Karan Singh, presented the 1971-72 budget to the State Assembly on April 16. This was the first budget of Himachal Pradesh after it attained full-fledged Statehood in January this year. The total receipts are placed at Rs 79.88 crores which include domestic receipts of Rs 31.63 crores, and Rs 48.25 crores expected grants-in-aid and other loans from the Union Government. On the other hand, the total expenditure is estimated at Rs 80.18 crores, thus showing an overall deficit of Rs 30 lakhs which is the lowest among the budget deficits of all the States, except Orissa which showed a surplus of Rs 33 lakhs. The Finance Minister has not proposed any new taxes and the entire deficit has been left uncovered.

The 1971-72 Annual Plan outlay of Himachal Pradesh is placed at Rs 20.82 crores, which is higher than the previous Annual Plan by about 23 per cent. As the Finance Minister stated, almost every important sector of the State's economy has been allocated larger funds than ever before. □

THE WEEK

THE freedom fighters of Bangla Desh suffered major reverses last week following a thrust by the Pakistani army towards Sylhet's border with Assam. The Pakistani army took control of Sherpur Ghat, Feni in Naokhali district, Mymensingh and many other centres previously held by the freedom fighters.

Islamabad decided on April 24 to close down her mission in Calcutta and asked India to close her Dacca mission. This followed a Pakistani allegation that India failed to accord the "necessary facilities" to the Pakistani Deputy High Commissioner, Mr Mehdi Masud, in Calcutta. On April 25, the Indian Foreign Ministry informed the Pakistani High Commissioner in New Delhi that Islamabad should provide categorical assurances of safe repatriation of personnel as well as protection of archives and documents of the Dacca mission. In reply, the Pakistani High Commissioner informed that this would be done on the basis of strict "reciprocity" which meant that India would have to repatriate all members of the Pakistani mission in Calcutta, including those who defected for Bangla Desh. New Delhi promptly rejected this interpretation of "reciprocity." According to reports available on April 27 and 28, members of the Indian Deputy High Commission in Dacca were under virtual house arrest. The police in Calcutta were keeping vigilance on the movements of the West Pakistani staff of the erstwhile Pakistani Deputy High Commission in Calcutta.

Mr C. Subramaniam was sworn in as Union Minister for Planning by the President, Mr V. V. Giri, on April 24. Mr Subramaniam is also to be designated as Deputy Chairman of the Planning Commission in succession to Dr D. R. Gadgil who relinquishes office on May 1.

Dr Harekrushna Mahatab tendered his resignation on April 27 from his position as the leader of the Congress (R) Legislature Party in Orissa.

Mr Chimanbhai Patel, a former Gujarat Minister, was unanimously elected on April 24 as the leader of Congress (R) Legislature Party in Gujarat. Mr Patel replaces Mr Kantilal Ghia.

Exports rose in 1970-71 by about 8.5 per cent thus exceeding the Fourth Plan target of 7 per cent, according to the Foreign Trade Minister, Mr L. N. Mishra. The figure for the first 11 months (April 1970-February 1971) was Rs 1,395 crores or Rs 100 crores more than the corresponding period of the preceding year. Exports during March 1971 are expected to total Rs 135 crores, which means the total exports for 1970-71 would be Rs 1,530 crores against about Rs 1,413 crores for the preceding financial year.

The International Development Association (IDA) has announced two credits to India (totalling \$153 million (Rs 115 crores) for the development of telecommunications and the electric power transmission programmes. Telecommunications get \$78 million and the power transmission programme \$75 million. The total IDA credits to India during the current World Bank's fiscal year ending in June come to about \$183.1 million.

The Union Government decided on April 23 to provide transport subsidy for

industries started in certain States and Union Territories as a further incentive to entrepreneurs to establish industries in far-flung and remote areas of the country. The extension of subsidy offered will be 50 per cent of the transport cost of both the raw materials and finished products for all industrial units to be set up in industrially backward areas. The States covered under the scheme are Jammu and Kashmir, Meghalaya, Nagaland, Tripura and the Union Territories of NEFA and Manipur. (See also Survey.)

Mr P. L. Tandon, Chairman of the State Trading Corporation, announced on April 23 that the STC would enter the bill market next week. All arrangements had been made in consultation with the Reserve Bank for the STC to discount the trade bills and utilise its surplus funds.

The India-Pakistan/UK and Continent Conference decided on April 24 not to increase the freight rate on the export of Indian oilcake during this year.

The Union Government has decided to allow cash assistance to joint ventures for exports on par with those for exports of machinery and equipment. At present cash assistance for exports of machinery and equipment is being allowed only in the case of joint ventures where machinery and equipment form part of Indian participation. But such assistance does not exceed 10 per cent of the f.o.b. value of the exports in the case of joint ventures. The Government has now decided to treat joint ventures on the same footing as normal exports.

The Punjab State Electricity Board decided on April 27 to allow free supply of electricity for domestic use to all its class III and class IV employees. Class III employees will get 30 units a month free while class IV employees will get upto 20 units.

The Bata Shoe Company Private Ltd has declared closure of its factory, establishments and offices at Batanagar near Calcutta with effect from April 25. The services of all employees have been termi-

nated except of those "who have been specifically advised otherwise".

After a two-day flight highlighted by a link-up with the orbital space station Salyut-1, Russia's three-man space mission Soyuz-10 returned to earth on April 25. Claimed to be part of "a series of important tests and technical experiments", the Soyuz mission is credited with Soviet efforts to construct a space station.

President Francois (Papa Doc) Duvalier, dictator of Haiti died on April 21 at the age of 64. Papa Doc ruled his Negro republic with a combination of terror and black magic.

Sweden lowered its Bank rate on April 22 from 6.5 per cent to 6 per cent.

Money easy

Conditions in the Bombay short-term money market were easy as of Tuesday. The demand for funds was maintained. In the inter-bank call section both renewals and fresh money were reported at 6 per cent. In the Calcutta market the rate ruled at 5 per cent.

Price index steady

During the week ended April 10, 1971, the Index Number of the Wholesale Prices recorded a nominal increase of 0.1 per cent to 181.8. At this level, the index was 2.9 per cent above its level a year ago.

PEOPLE

BRIG B. S. Bhagat has been elected President of the Organisation of Pharmaceutical Producers of India for 1971-72.

Mr H. K. Jain has been elected President of the Federation of Hosiery Associations of India for 1971.

Mr N. H. Attreya has been elected President of the Management Consultants' Association of India for 1971-73.

Mr A. L. Taylor, General Manager of IBM World Trade Corporation, has been elected President of the Indo-American Chamber of Commerce for 1971.

50 years ago

There were many signs indicative of an approaching improvement in trade, here and abroad, when the great labour crisis set the clock back in the homeland. By the threatened upheaval this gratifying revival was most regrettably checked, and although the general strike of railway men and transport workers was thwarted by a mere fluke the coal problem still awaits settlement, the verbal thrusts and parries between owners and miners having so far resulted in nothing but tantalising inactivity. The embryonic trade movement is thus deprived of fructification; and the British taxpayers have the mortification of knowing that they will eventually be called upon to foot the bill for military and other emergency measures,

costing something like £250,000 daily; for until the miners settle down to honest work the country must remain on the defensive. Britain, we are informed, is short of fourteen million tons of coal, industry being thus paralysed, capital being thus wasted, widespread misery and unemployment being thus created. British merchandise is losing the foreign markets it has hitherto possessed; American coal is arriving in Liverpool; and the nation is painfully reminded once more that the production, distribution and proper utilisation of coal are matters of vast national importance, and that, when supplies cease, chaos, industrial disorganisation and wretchedness ensue.

A dream today, a reality tomorrow

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

From Our Own Correspondents

A challenge to bank employees

NEW DELHI

THE Union Finance Minister, Mr Y. B. Chavan, has hinted at selective liberalisation of bank credit. At the end of a two-day meeting with the custodians of the nationalised banks, Mr Chavan told correspondents that the resources position of the banks had eased in recent weeks and in this context there could be some credit liberalisation. The Finance Minister's statement could provide comfort to some of the industries which have been complaining about the credit squeeze. Particularly the cotton textiles industry and the sugar industry have made representations to the authorities about the difficulties created for them by the recent credit squeeze. But it yet remains to be seen in what direction this selective liberalisation will take place. There were enough provisos added by the Finance Minister himself on the opening day of the conference when he addressed the custodians.

First, Mr Chavan made it clear that the needs of the priority sectors must be fully met though, at the same time, the banks should ensure that no productive effort was starved of credit. By and large, he was satisfied that the banks were meeting the credit needs of the priority sectors but there was a hint in his speech that the small man was still being ignored. He said that it was unfortunate that whenever the credit squeeze came about, the worst sufferers were the small borrowers, especially in the neglected sectors, because it was easier to deny credit facilities to them than to the big borrowers. In so many words he told the custodians that the banks were not scrutinising properly the loan applications from the larger parties.

The bankers were quick to take the hint. They agreed that there should be a close scrutiny of applications for bank loans. Where there was a big gap between the sum utilised and the credit limits sanctioned, it was agreed, there should be an attempt made to narrow this gap while renewing the credit limits. Such a policy would help discipline the borrower and lead to better inventory control. There was nothing new in this. In fact, the Dehejia Committee had drawn particular attention to this problem. In recent months the banks had also been levying a commitment charge on unutilised credit and had sharply curtailed the limits sanctioned to many of the borrowers. It is, therefore, not clear as to what further steps the nationalised banks propose to take to bring about the desired discipline.

The bankers and Mr Chavan himself, at the same time, considered that there could not be a uniform policy for all the banks in the allocation of credit. While broadly they will have to be guided by a credit policy for the entire banking system, individual banks must enjoy some flexibility in credit allocation. This was necessary because individual banks would have to take into account the areas they served.

There was considerable discussions on the branch expansion programme parti-

cularly in the context of the emphasis that Mr Chavan laid on deposit mobilisation. The Finance Minister, while welcoming massive branch expansion programme, drew attention to the creation of some inter-State and inter-district variations in terms of population coverage, credit and credit-deposit ratios. He felt that a close and critical review by each bank of the new offices opened by it last year should prove useful in the formulation of guidelines for the future of branch expansion.

It was inevitable that this meeting should have also taken note of the complaints that the customer service had deteriorated after nationalisation of banks and that policy decisions taken by the boards of the banks were not being translated into practice immediately. In fact, Mr Chavan used the word "tardy" in this connection. But banking services can improve if the employees co-operate with the officers and it was, therefore, good that Mr Chavan met also the bank employees to emphasise this point. The Union Labour Minister, Mr R. K. Khadilkar, was more forthright at this meeting and suggested that through total involvement and active participation, bank employees should present to the public not the image of a confirmed agitator but that of a partner in progress. The representatives of employees have promised the Finance Minister all co-operation in achieving the objectives of nationalisation. The responsibility will be all the greater on them now since in the new boards of directors of the nationalised banks to be set up by the end of June there will be representatives of employees. Inside the board rooms they will have to be constructive in their suggestions and at the counters show all eagerness to serve the customer. □

PLANNING COMMISSION

Politician-technocrat at the helm

NEW DELHI.

WITH the appointment of Mr C. Subramaniam as Planning Minister as well as the Deputy Chairman of the Planning Commission—he will assume charge of the latter from May 1 when Dr D. R. Gadgil relinquishes charge—the much-advertised but long overdue process of overhauling the planning machinery has begun. Obviously, the Prime Minister has found that the system introduced four years ago under which the office of the Planning Minister and Deputy Chairman was bifurcated and held by different persons has not worked well. This was done at the instance of the Administrative Reforms Commission which had recommended that the Planning Commission should function more as an advisory body and that its Deputy Chairman and members should be able to go ahead with the task of

planning fairly independently. The idea was that by divesting the head of the Commission of ministerial responsibilities and excluding other Ministers from it the planning machinery will be less subject to political pressures and pulls. Since, however, the Government was answerable to Parliament for any act of omission or commission of the Planning Commission, the Prime Minister as Chairman of the Commission should hold the planning portfolio which Mrs Indira Gandhi did.

The system had some merit in that it helped to create conditions under which the Commission could function with relative detachment. At the same time it had a major drawback. It relegated to the background the overseeing duties of the Commission vis-à-vis the executing ministries and departments, which are essential for proper and timely implementation of Plan programmes and projects. It is public knowledge that the progress of the Fourth Plan during the first two years of its span has been extremely tardy. There was shortfall of Rs 120 crores in Plan expenditure in 1969-70. This, on a rough estimate, increased to Rs 160 crores last year. Some of the ministries and departments have not been able to spend the funds allocated to them for development schemes. This indeed is a new trend which is quite disturbing for, in the past, even if the ministries failed to achieve the physical targets in respect of the schemes and programme under their control they generally fulfilled the financial targets.

The reason for this is the implementation of the scheme has gone from bad to worse. The Planning Commission cannot be held responsible for this but the system under which it had been functioning has not permitted it to play even the role of a watch dog in regard to the implementation.

Mrs Gandhi has rightly reverted to the system under which the office of the Planning Minister and of the Deputy Chairman were combined in one person. This by itself will not lead to better implementation of the Plan schemes or contribute to better performance of the Fourth Plan. But her choice of Mr Subramaniam for the job is a step in the right direction. With his wide and varied experience as a Minister at the Centre and in the erstwhile State of Madras and the sound and practical knowledge of agricultural and industrial problems he should restore to the Planning apparatus the élan it possessed and the respect it commanded from the Ministers at the Centre and the State Governments. He is an unusual example of a politician who is a technocrat as well. □

SMALL-SCALE INDUSTRIES

Afro-Asian co-operation in sub-contracting

NEW DELHI.

THE second Afro-Asian conference on small industries, which held a five-day session in New Delhi last week, has asked

member-countries to make, as a matter of policy, the development of small-scale industries an integral part of their overall industrial programme. This stems from their realisation that unemployment, which is widespread in their countries, can be effectively tackled only by stimulating the growth of industries in the small-scale sector. The development of small industries undoubtedly is the best way of enlarging job opportunities at a relatively low capital cost. Though many developing countries have attached to small industries the importance they deserve, in practice, they put the accent on large and capital-intensive industries. The anxiety for rapid economic development had much to do with this and consequently a kind of "industrial verticality" is very much in evidence in some of them.

However, growing poverty and unemployment, in spite of the industrial progress made by them, require that their industrial programmes should be broad-based so that small industries which provide a solution to some of the formidable problems faced by the developing countries are enabled to come into their own. Recognising this, the Afro-Asian conference has urged the creation of a national organisation in each country for the speedy and co-ordinated development of small-scale industries. In some of the countries the small entrepreneurs have to deal with far too many agencies of the Government, which results in delays in providing assistance to them and causes frustration among them. Therefore, a unified organisation of the type envisaged by the conference will facilitate the growth of small industries.

An important function of the national organisation should be to forge proper and enduring links between the small and large industries so that they complement each other's role in the industrial development of the country. In other words, the larger units, instead of making all the components and accessories themselves, should encourage the small-scale sector to produce as many of these as possible for them. Some countries have made a beginning in this direction. But much will have to be done before this becomes a major feature of industrial development in the developing countries. While the governments concerned must improve their arrangements for the supply of the machinery and raw material and the provision of capital to the small-scale industries, the big units must assist them with the latest technical know-how and guide their operations.

In this connection, a relevant question is whether the small-scale sector should be encouraged by positive steps or through policy measures of a negative or restrictive nature. For instance, in India a large area of production, covering several items, has already been reserved for production in the small-scale sector. There is no doubt that this section needs to be protected against competition from units with larger resources and better technical capabilities, but the best way of doing this is to provide them assistance to overcome their competitive weakness rather than prevent others from contributing to increased production which, in the prevailing situation of shortages all round, is a crying need.

Actually, there will be no need for a negative approach to this problem once

the larger units step up their production activities and go in increasingly for sub-contracting. This, more than anything else, will help the small industries to develop rapidly. But sub-contracting should not be confined to national boundaries. Consequent on the scarcity of labour and high labour costs, many advanced countries are having recourse to sub-contracting for obtaining from other countries some of the components and accessories that go into their end-products. The countries of Asia and Africa can greatly benefit from this trend in the advanced countries if they can gear their production in the small-scale sector to meet their requirements in terms of quality, prices and delivery schedules.

International sub-contracting has immense possibilities of co-operation among them in building up the small-scale industrial sector. Hitherto, co-operation among them has been confined to technical and other matters. An important outcome of the Afro-Asian conference is that this co-operation will be extended to the field of small-scale industries. A seven-nation standing committee has been set up to give shape and content to the concept of regional co-operation for the development of small-scale industries. It will hold meetings periodically to help implement the programme for co-operation. The first meeting of the committee has already been held in New Delhi and the next will be in Teheran in August.

Encouraged by India's experience in the development of small-scale industries, President V. V. Giri, who inaugurated the Afro-Asian conference, offered this country's help to the delegates of 26 countries participating in the conference in promoting their own small industries on a bilateral or multilateral basis. During the last decade the number of units in the small-scale sector in India had increased from 36,000 to 190,000. They have been contributing increasingly to the total annual industrial production of the country. The productivity gap between small industries and the mechanised large-scale units is being narrowed, thanks to the adoption of improved techniques and the installation of modern equipment by the former. Consequently, the small-scale sector is now capable of producing not only sophisticated consumer goods but also produces goods such as precision instruments, machine tools and industrial equipment. Besides, the total exports from small-scale units last year exceeded Rs 80 crores. It is a tribute to the rapid strides that India has made in the small-scale industries' sector that many of the countries of the two

regions which participated in the conference have sought India's assistance. □

MYSORE

Breathing time for Congress (O)

BANGALORE

MYSORE is in for a long spell of President's rule. It was a clever political move on the part of the dislodged Chief Minister, Mr Veerendra Patil, to have called off his Ministry-making efforts at the last minute even though he was well set to provide an alternative Ministry on the basis of the strength of his own party—100 Congress (O) members—and backed by the support of about 15 members belonging to other parties. The Congress (R), despite commanding a majority of 120 in the 216-member State Assembly, was unable to form the Government because of the in-fighting in the party. The third bloc, with a strength of 20 members belonging to the SSP, the Jana Sangh, the Swatantra and Independents, could not muster enough strength to form a minority Government.

A large majority of the MLAs of all parties had not taken kindly to the idea of the dissolution of the State Assembly. This point was cashed in on by Mr Veerendra Patil particularly after the Congress (R) dropped the idea of Ministry formation. In the process, more than 35 Congress (O) members who had earlier defected to Congress (R) retraced their steps into the Veerendra Patil camp, raising its strength to 100. While Mr Patil was under great pressure from not only his own partymen but also some members of the Congress (R) to form a new Government, he had second thoughts that such a ministry would be exposed to the risk of constantly functioning under the mercy of defectors whose loyalty could not be taken for granted. It was also felt that the Veerendra Patil Ministry had resigned gracefully and while in office it had created a very good impression. Such a favourable public image of the party would be spoiled if it entered the Government through the backdoor. Also, the mid-term Lok Sabha poll verdict had gone against the Congress (O). Under such circumstances, the people would not take kindly to the party if it tried to get into power again.

Having played its cards skilfully, the Congress (O) has reaped a number of political advantages. Even as the Con-

WANTED

Applications are invited for post of a DIRECTOR to head the Institute in the grade of Rs. 2500-100-2700-150-3000; free housing provided. High academic qualifications, outstanding independent research and wide experience in research guidance in economics essential. Apply stating full particulars on or before 31st May to Director, Sardar Patel Institute of Economic and Social Research, Sheth Mangaldas Marg, Ahmedabad-6.

gress (O) was scared of an Assembly mid-term poll in May so soon after its debacle in the Lok Sabha mid-term poll, by encouraging the third bloc's Ministry-making move it kept the kettle boiling and more time was lost making a mid-term poll in May impossible. According to the Governor, Mr Dharma Vira, the poll could now

be held only after October next. Yet the future of the Congress (O) hangs in balance with a large chunk of the legislature wing eager for a merger with the Congress (R). Reports say that the response from the Congress (R) was not encouraging. In the circumstances, the Congress (O) partymen

are biding their time until after the organisational elections are over. The expectation is that the old guard in the Congress (O) top leadership would bow out of the scene and younger elements might take over. Mrs Gandhi would then have not much objection to the re-union of the two factions. □

REPORT

THE WORLD

From Our Own Correspondents

Lucrative switch trade in cashew

THE man who first discovered that there are three kinds of lies—lies, damned lies and statistics—probably had been working with trade statistics. For several years now Indian and Common Market officials have found themselves in disagreement over the exact volume of India's exports to the Community. In a number of cases the figures recorded by the EEC's statistical services have proved to be higher, suggesting that India's export performance was not so bad after all.

For a variety of (technical reasons the Indian figures of exports to the EEC will never coincide with the Community's figures. But there are cases where the difference is so large as to make a more detailed examination imperative. This is the case as regards India's cashew exports, for example. The accompanying table gives the figures for the 3-year period from 1967 to 1969, the figures reported by the Department of Commercial Intelligence and Statistics (DCIS) being shown in the first column in each case and those by the Statistical Office of the European Communities (SOEC) in the second.

While several of these figures tally, there were two important exceptions in 1969: the EEC's figures for both Germany and Belgium were substantially above the corresponding Indian figures. All the figures for 1970 are not yet available, but in the case of Germany cashew imports from India came to 907 tons according to the Community and only 385 tons according to the DCIS. There is a similar discrepancy for Belgium: the figures for the first 9 months of 1970 is 136 tons in one case and 51 tons in the other (DCIS).

International trade moves in mysterious ways, so that it is not altogether easy to explain such differences. The most reasonable explanation seems to be that there is a good deal of switch trading in cashews with Eastern Europe, much of it centred in Hamburg and, if to a much lesser ex-

tent, Antwerp. In other words, Indian cashews imported into Eastern Europe (under the rupee payment agreements) seem to be finding their way to the West European market, to the benefit of Europeans but not of Indians.

Ironically enough, this increased switch trading is a tribute to the efforts of the Cashew Council's European office. It must be accepted that the efforts to promote European consumption of Indian cashews are proving so successful that certain East European countries (although not the Soviet Union) are taking advantage of them to unload on the West European market what, after all, is a luxury item in the context of their own economies. And what is more, because of the efforts of the Council's European office they apparently are getting increasingly higher prices.

The absurdity of the present situation cannot be denied. As the raw materials imported into India by the processing industry must be paid for in dollars, it is only logical that its exports should be against hard currency. And yet the EEC's import statistics suggest that both Germany and Belgium are being offered cashew nuts which had been sold to Eastern Europe against rupees. Although the final sale is for a hard currency it is to the benefit of the East European balance of trade, not that of India.

New Delhi clearly must decide just whose balance of payments it wants to prop up. The import statistics make it clear that the extensive promotion which the Cashew Council's European office has been undertaking for a number of years is proving successful. Indian exporters presumably could benefit even more if larger quantities were earmarked for the West European market. The need for this is further underlined by the fact that much of the effort of the European office has been directed towards increasing demand for whole kernels, which inevitably command higher prices than broken. The success

of these efforts is evident from the steady increase in the unit value of the cashew nuts imported from India and their much higher unit value when compared to imports from other sources (mainly Africa). Thus Indian cashews imported into West Germany commanded an average price of \$1,255 per ton (Rs 9,413) last year as against \$890 (Rs 6,675) in the case of imports from other sources.

Ironically enough, East European exporters have benefited from the demand for quality Indian nuts, despite their natural tendency to unload goods at whatever price the market will bear. It is likely, therefore, that the unit price would be even higher were imports to come direct from India rather than through a switch deal.

Although East European exporters appear to be among the beneficiaries of India's export promotion campaign, she has no alternative but to continue her efforts. Aided by European investments to some extent, her African competitors are increasingly eager to develop their sales to Western Europe. In the absence of extensive product promotion and trade liaison by India's Cashew Council they probably would acquire an important share of what is a growing market. □

WEST GERMANY

A case for shipping credit

BONN.

NEGOTIATIONS between New Delhi and Bonn for West German credit for shipping seem to have made little progress. At one time a contract was about to be signed by the Shipping Corporation of India for a 160,000 oil-bulk-ore-tonner with a German shipyard. But the entire matter fell through just a few hours before the contract was to be finalised. It would have indeed been a good purchase for the Shipping Corporation since even with escalation the cost would have amounted to about DM 90 million (Rs 18.14 crores). The basis for the then contemplated contract was the credit DM 60 million (Rs 12.3 crores) which the West German Government was prepared to extend to India out of some standing German credit which was still then not used. But at the last minute the Hermes Insurance Company filed a report saying that it was not prepared to extend insurance cover presumably on the ground that it was not sure whether India would be able to find the necessary

EEC : Imports of cashew kernels from India 1967-69

	1967		1968		1969	
	DCIS	SOEC	DCIS	SOEC	DCIS	SOEC
France	472	446	359	384	532	527
Germany	494	443	915	544	581	878
Holland	660	446	599	538	633	632
Belgium	208	200	166	166	97	181
Italy	66	58	26	34	68	67

SOURCE : DCIS and Statistical Office of the European Communities.

foreign exchange to make good the difference between the available German credit and the total cost of the ship.

Since then the costs of ships have gone up and easily the Shipping Corporation will have to pay nearly DM 110 million (Rs 22.5 crores) for the same ship if it were to purchase it today. The West German Government is apparently still reluctant to advance a larger credit. New Delhi has been trying to point out that even the Japanese who were resisting at one time to extend shipping credit to India, were now providing facilities for the Shipping Corporation to purchase a 126,000-tonner. Further, India expects the West German Government to show far greater consideration to India's needs than even what Japan is doing since consistently India has had an adverse balance of trade with West Germany. Even in 1970, according to West German statistics, German imports of Indian goods totalled DM 260 million (Rs 53.3 crores) against exports of DM 571 million (Rs 117 crores), leaving an unfavourable trade gap for India of nearly DM 311 million (Rs 63.7 crores). Actually, this trade

gap is much higher since the German figures take into account indirect import of Indian goods of over DM 90 million (Rs 18.14 crores). What is to be noted is that the trade gap in 1969 was of the order of DM 261 million or Rs 53.5 crores (taking into account indirect imports of DM 82 million or Rs 16.8 crores).

It is impossible to envisage that Indian exports to West Germany can increase at a sufficiently fast pace to narrow down the adverse balance of trade. In fact, while between 1969 and 1970 German exports moved up by 15 per cent, imports were higher by only 14 per cent and that, too, taking into account the increase of DM 6 million (Rs 1.23 crores) in the indirect imports of Indian goods. This continuous unfavourable trade could result in India cutting sharply its imports from West Germany unless she is assured of some sort of compensation in one way or the other. A line of credit for shipping of DM 100 million (Rs 20.5 crores) at this stage by West Germany would be interpreted as an appreciation on the part of Bonn of the serious problems that face India in her trade. □

mean that the Russians will insist upon driving a harder bargain with the Americans on the question of strategic arms limitations. This is a question in which the Russians are greatly interested although they are beginning to feel that Nixon no longer cares for a settlement and his success in enticing the Chinese towards rapprochement will make him even more disinclined to speed up any compromise.

The Sino-American rapprochement may also have a deleterious effect in Europe where the solution of the Berlin problem, and therefore, of the crucial Soviet-West German relations is held up because of noticeable dragging of feet by the United States and France, on the one side, and Herr Ulbricht of the German Democratic Republic, on the other. But elsewhere, for instance in West Asia, it may not be too impossible for Washington and Moscow to come to an understanding, if not an agreement. In any case in all these regions, while indulging in fierce competition for influence and power, the two countries have remarkably managed to avoid direct confrontation, as the Chinese have done in Vietnam. Russians have also noted that the Chinese warming up towards America has taken place in the wake of the Laos operations by the United States and suspect that there might have been some understanding between Peking and Washington on this. Although officially talks between the Chinese and American Ambassadors in Warsaw are no longer taking place, there is belief here that some means of other secret contacts at other levels between Peking and Washington have been established, thus obviating the need for the Warsaw ritual.

The only condition which Moscow is likely to insist upon is that the Americans undertake to respect and accept legitimate Soviet interests in these areas. Simultaneously, Soviet policy-makers are also afraid that if such an understanding is not arrived at between them and the Americans then Washington and Peking will, if not jointly, with a tacit agreement, try to undermine Soviet influence in these areas. This danger for the Russians is most acute, in Russian view, in Asia, where their own involvement has immensely grown in the past decade. But compared to them the Chinese have more geographical advantages and the American more financial power and leverage. The Soviet dilemma is, therefore, great.

But it is likely that the Soviet response to the challenge of Sino-American rapprochement in such areas is likely to be to concentrate upon creating viable and powerful pockets of resistance to the Chinese as well as American influence. It may mean their switching over to a policy of selective friendship with individual countries as opposed to their efforts in recent years to improve relations with all and sundry.

Altogether, it is not surprising, therefore, that Moscow finds little in the current ping-pong games to rejoice. Moreover, these are games from which they have been pointedly excluded. These are thus games which Moscow views as a supreme challenge to its power and diplomatic skill, a challenge which will grow rather than diminish in the coming years. It is also a challenge which will become the greatest preoccupation of Soviet foreign policy from now on. □

THE PING-PONG GAME

If only Moscow could play the referee!

By Dev Murarka

Moscow.

THE ping-pong diplomacy between Peking and Washington is a most disturbing political development for Moscow. The picture of Chou En-Lai, all sweetness, light and smiles, reciprocated on the other side by a beaming Nixon, is not one to appeal to them. It increases their suspicions. It is not that the new vogue for ping-pong diplomacy between the Chinese and the Americans has come as a surprise to the Russians. Indeed, for some time now Moscow has been at pains to establish that a lot more is going on between Peking and Washington than appears on the surface. But now that it has come to surface in such a dramatic fashion, it is no longer a remote possibility. Besides, Moscow is unshakably convinced that it is hostility to Soviet interests which will act as the cement to bind the new structure of Sino-American relations which is being erected.

Russians, of course, cannot argue against any normalisation of relations between Washington and Peking or international recognition of China and her admission to the United Nations. But they also cannot ignore the realities behind the evolution of Chinese diplomacy. For them it poses acute problems of strategy and tactics in foreign affairs. Their fundamental concern from now on will be to delay or prevent as much as they can any consolidation of ties between Peking and Washington. Their room for manoeuvre, however, is limited. The only viable tactics available to them is to try to reconcile with China on the one side and the United States on the other. They calculate that reconciliation with any one of them or even with both of them will slowdown the speed of Sino-American rapprochement, if nothing else.

Unfortunately, they realise that they are in a relatively weaker position in this political game. The Chinese demand con-

cessions which the Soviet Union cannot make without damaging her own national interests. As for the United States, the balance of distrust between Moscow and Washington is still bigger than of mutual trust between them. President Nixon's soft line towards China as against his noticeably harder one against Moscow only reinforces Soviet reluctance to deal with him or trust him. Moscow also has little doubt that even the current move by Nixon to signal fraternisation with China and Peking's eager response are intended and will serve as means of political pressure upon the Soviet Union, demanding great concessions.

It is true, of course, that on balance Moscow would rather make concessions to Washington than to Peking. There are several reasons for it. In the first place the Russians consider the Chinese hostility towards them to be of a more fundamental and permanent nature. Secondly, at a psychological level they consider that they have more in common with the Americans, who are Western, than with the Chinese, who are Asian. In the third place, while they compete with America in the international arena, they can arrive at an accommodation with Washington easily on many matters while any understanding with Peking is a more difficult matter. Lastly, they seem to believe that in the long run the Americans will be prepared to combine with them to keep China in check.

But these are long-term considerations. In the immediate future these are likely to have the effect on Soviet foreign policy of making it more conciliatory in form and harder in the matter of making any actual concessions in haste. Thus, for instance, Moscow will go a long way towards improving trade and state relations with Peking but is likely to be more unyielding on the territorial question. It might also

BUSINESS REPORT

From Our Own Correspondents

MITSUBISHI DELEGATION

Export-oriented joint venture planned

BOMBAY.

MR Ninichi Nakagawa, leader of the 11-member high-power Mitsubishi mission to India, told *Commerce* in Bombay on Tuesday that his mission has taken the first concrete step towards setting up joint ventures in India. Mr Nakagawa said that he has finalised negotiations with Chembur Bone and Fertiliser Co (Private) Ltd, for the manufacture of ossein which is used for producing films. The entire output of the factory will be exported to Japan. The plants of the factory will be located in Bhavnagar in Gujarat and in Bombay. The Indian party will hold about 60 per cent of shares and Mitsubishi about 40 per cent. The total investment of the plant will be nearly Rs 1.5 crores and the output of this joint venture will be about 2,400 tonnes a year.

Mr Nakagawa said that this joint venture will open up a new export market for India as ossein will be exported from India for the first time. He also disclosed that his delegation had fruitful talks with Indian parties for the export of bicycle parts and components of industrial machines. "There is no need of any detailed technical assistance from Japan so that these components could be manufactured here. Your technological level is so high that what you require is merely designs and specifications," he said.

Mr Nakagawa was happy to note that his earlier observation at the Indian Merchants' Chamber, Bombay, that it was difficult to find good Indian partners was proved to be incorrect. During his recent visit to Bombay he met a number of medium-sized entrepreneurs who are competent and reliable.

Earlier, Mr Nakagawa told the Indian Merchants' Chamber here that his team was on a sort of "reconnaissance" tour of the country. A bigger team might come later for a pin-point study of trade and investment policies. The mission leader spoke about Indo-Japanese collaboration with enthusiasm while, at the same time, pinpointing some of the difficulties that faced the foreign investors.

The mission leader said that it was difficult to find good Indian partners as all the large industrial houses were operating under curbs. He had explained this situation to a high Union Finance Ministry official after which the official furnished a list of 200 Indian firms from which to select the prospective partners. The Japanese are not very satisfied about this. The Japanese attitude is that it would be easier for them to enter into financial participation where there is collaboration with established industries or groups with proven record. They need not be anxious in that case to have control of the joint venture with majority participation. Thus they would be willing to have participation of even 40 per cent or less

in the joint venture. This is in contrast to investors from some of the highly industrialised countries in the West who have been keen on having a majority participation.

Mr Nakagawa's other grievance was against the tax of 50 per cent on royalty to be repatriated. In other countries this was about 5 to 10 per cent, he said. Reports from New Delhi suggest that the Union Government has asked for information from other countries about the taxation on royalties.

The two-week visit of the economic mission of Mitsubishi Shoji Kaisha (MSK) Ltd to this country augurs well for the strengthening of the Indo-Japanese economic ties. The mission belonging to the Mitsubishi Group, the largest business combine in Japan, was here to study the investment climate and to explore the possibilities of establishing joint ventures and developing exports from India to Japan and to third countries. The Mitsubishi Group has been operating in India for a long time with investments in three industrial projects, a sheet glass factory, a rayon factory and a tiller factory. Since 1959, 14 collaboration agreements between Mitsubishi and Indian firms involving production of chemical plants and other industrial plant equipment, rayon yarn, viscose filaments, power tillers, house service meters, safety breakers, etc, have been sanctioned.

The 11-member Nakagawa mission landed in the country within four weeks of the formation of a new Government by Mrs Indira Gandhi backed by a massive majority in Parliament. This itself is considered as a portent of the change that seems to be undergoing in the attitude of the foreign investors to investment and collaboration in joint ventures in India. The change is coming with awareness abroad of the political stability in the country in contrast to the happenings in some of the other countries in the Asian region. □

SUGAR INDUSTRY

Nationalisation at what price?

LUCKNOW.

THE Congress (R) Ministry, led by Mr Kamalapati Tripathi, is now busy studying the issues involved in the nationalisation of sugar industry in the State to which it is committed. The subject came up at the very first meeting of the Cabinet on April 5, but a decision was postponed pending a study of the report of the three-member sugar committee which was appointed by the BKD-Congress (R) Government headed by Mr Charan Singh. Understandably, no immediate conclusion could be reached for the report itself raises some

questions that do not lend themselves to easy answers.

The committee's report has not yet been made public. But it is learnt that it has suggested that the nationalisation of the 67 private sugar mills in Uttar Pradesh was necessary to frame and implement a scheme of rationalisation and modernisation and also to bring about an improvement in the relationship between the growers and the factories. On the ticklish question of compensation, the committee has favoured the fixation of payment on the basis of the stock exchange value of the shares of these mills. It has referred to the principle of determination of compensation on the basis of net maintainable income. It has, however, argued that the profits of the sugar mills are not the results of a competitive market because the Tariff Commission has been fixing fair prices of sugar in such a manner that the factories in all the regions are able to achieve a certain degree of surpluses by way of profits, which cannot be called "normal". The protection given by the State can, therefore, not become the basis for fair compensation in the event of a take-over of the sugar mills.

While it has not dismissed the principle of written down value of assets for fixing the amount of compensation, the committee has said that most sugar factories in the State are units of larger industrial organisations. The accounts for each unit are usually not published separately and, therefore, fixing the amount of compensation for each unit on the basis of this principle may not be possible. The total fixed assets of the 59 companies, excluding Modis and DCM, having sugar factories in Uttar Pradesh have been worked out at Rs 28.96 crores in 1967-68. This being the overall value of the undertakings, the value of the sugar factories has been estimated at Rs 15 to Rs 20 crores. The total compensation on the written down principle has been put around Rs 15 crores for all the 67 sugar mills in the private sector.

The committee considered three suggestions regarding the future set-up for the mills. These were: running the mills as departmental undertakings; forming a separate corporation for each unit; and the setting up of a central corporation for all units. It rejected the first two suggestions for, in its opinion, that would adversely affect the mills' efficiency and make it difficult to modernise the weaker units. Its own suggestion was the constitution of a State sugar mills corporation with the representatives of both the workers and the cane growers on the management.

Obviously, before Mr Tripathi's Government can take a decision, it must decide how to raise the resources to pay the compensation as also whether a corporation to look after 67 units is the best way of managing them. The public sector has not yet been able to throw up a model of management which can look after as many as 67 units, spread over such a wide area. Nor is it clear from where the State Government will be able to mobilise ex-

pertise on such a large scale assuming that it comes to the conclusion that those who run the industry at present are incompetent for the purpose.

Meanwhile, the State Government has issued recovery certificates against 21 sugar factories on account of non-payment of cane prices. Effective steps are being taken, it is claimed, for early payment of arrears to cane growers by the sugar factories, which stood at Rs 20 crores on April 1. Till March 31, the UP mills had crushed 11.26 crore quintals of cane and 2.74 crore quintals were to be crushed subsequently. Till that date 10.41 lakh tonnes of sugar had been produced and an additional 2.29 lakh tonnes were expected to be produced after March 31. More than 10 sugar factories will continue crushing up to the end of June and two more till the end of the first of July. Eleven out of the 71 sugar mills in Uttar Pradesh (four are in the co-operative sector) have been closed down for the season. □

FERTILISERS

Lag in production and consumption

NEW DELHI.

INDIA'S fertiliser imports in 1970-71 amounted to Rs 120 crores but this year they may not exceed Rs 75 crores. If this were a consequence of a sizable increase in the indigenous production of fertilisers, it would have certainly been a matter for gratification. But this is not the case. In spite of the increase in fertiliser capacity, production has only been creeping upwards. Against a production target of 2.5 million tonnes of nitrogen and 0.9 million tonnes of phosphatic fertilisers by the end of the Fourth Plan (1973-74), output from both public and private sector units at the end of 1970-71 is estimated at 8.5 lakh tonnes and 2.3 lakh tonnes respectively. The figures for the previous year were 7.15 lakh tonnes and 2.2 lakh tonnes. These speak of the slow progress of the fertiliser industry in spite of the high priority accorded to it in the programme for economic development of the country.

A substantial curtailment of fertiliser imports will have to be made this year largely because the growth of consumption has been less than anticipated. Actually this trend has been noticeable since 1968-69. The target of consumption of nitrogen that year was fixed at 17 lakh tonnes but actual consumption was about 12.1 lakh tonnes. Similarly, in the following year consumption was over three lakh tonnes less than the target of 17 lakh tonnes. In 1970-71 the target was revised slightly upwards to 17.5 lakh tonnes, but the demand for fertilisers was no better than in the previous year.

Because of the shortfalls in the targets set for consumption during the last three years some institutions including international agencies have come to the conclusion that India's fertiliser consumption would be significantly lower than the projections of the Food and Agriculture Ministry. It would be detrimental to the new strategy of increasing agricultural production in this country if this conclusion is accepted and acted upon.

If consumption targets have not been reached it is not because that there is

New jute capacity

MR H. D. Wahi, Chairman, Indian Jute Mills' Association, says that the proposal of the Central Government to set up new jute mills outside West Bengal would be disastrous for the sick units in West Bengal. If the objective of the Government is to increase production it could as well be achieved at a much lower cost by the revival of about a dozen sick mills in Calcutta which had been closed down, rendering some 22,000 workers jobless. Both in terms of employment and capacity-utilisation, these would be more productive rather than licensing new capacity elsewhere. If, notwithstanding the embarrassing overcapacity in the Calcutta-based industry, the manufacturing activity were to gravitate to other States, more and more mills in West Bengal will be forced to close down to the detriment of the State's employment position. What the industry needs today, according to Mr Wahi, is a separate five-year plan for its recovery, spelling out the targets of production and exports, the raw jute availability and, above all, the incentives that the Government would be prepared to give for the achievement of these targets.

Coal movement

The Indian Tea Association, Calcutta, says that the Ministry of Foreign Trade and the West Bengal Government should immediately intervene to ensure coal supplies to tea estates in north Bengal. Estates in Dooars have virtually run out of stocks and those in Darjeeling are left with stocks for less than three weeks. The allotment of railway wagons to Asansol and Raniganj from where coal is moved to north Bengal tea estates has been steadily deteriorating since January this year. In January-March only less than 50 per cent of the estates' indents were met while in the first three weeks of April only 25 per cent of their requirements had been met. The transportation of coal by road is three times costlier than by rail and the tea industry in West Bengal cannot bear any increase in costs without jeopardising its competitive position at home and abroad.

Cotton policy

Mr J. K. S. Nicholson, President, Bombay Cotton Merchants' and Mucadums' Association, says that the present cotton policy of the Government will not do any good to either the textile industry or the consumer, the grower or the trader. The policy of canalisation of imports, the proposed monopoly procurement by the State, the various financial squeezes and the failure of the cotton crop this year have resulted in a crisis for the cotton trade. There have been unusual fluctuations in prices. These wide fluctuations once again emphasise the need for some kind of insurance, hedge or shelter for the marketing men.

Credit squeeze on mills

Mr Priyakant T. Munshaw, President, Ahmedabad Millowners' Associa-

BUSINESS OPINION

tion, says that the remedy for inflation lies in the removal of impediments to production and not in tinkering with the interest rates. Credit squeeze may ultimately prove self-defeating in so far as stabilising the price line is concerned. On the advice of the Reserve Bank of India, some of the nationalised banks had issued in February 1971 instructions to textile mills such as (1) bringing down the advances to mills against cotton piecegoods and yarn to the level of their advances as on December 15 or 31, 1969, (2) raising the margin on finished goods (cloth in packed condition) from 20 per cent to 40 per cent and (3) reducing the ceiling on stock in process and on finished goods from 3½ months to two months production. Mills were also instructed to regularise their drawings in accordance with these instructions within a period of one month from the date of the receipt of the letters from the bank, failing which the banks proposed to charge the penal rate of interest at 12 per cent per annum on the entire outstandings. This policy of the banks placed many mills in an awkward position.

Sugar mills' finances

The Indian Sugar Mills' Association, Calcutta, says that the undue delay in announcing revised levy prices for the 1970-71 season has resulted in crippling the finances of the sugar industry. The inadequate availability of bank credit has aggravated the already difficult financial situation of sugar mills. According to the Association, sugar factories are no more in a position to continue cane payments and they should not be held responsible for default as the present situation has been created by circumstances beyond their control.

Export credit

Mr G. G. Siraj, President, All-India Exporters' Chamber, Bombay, says that the decision of the Reserve Bank to raise the ceiling rate of interest for pre-shipment and post-shipment export credit to 7 per cent would adversely affect export growth. It will have an all-round impact on the cost of money for exporters and reduce their competitiveness in international markets.

Raw materials for drugs

Brig B. S. Bhagat, President, Organisation of Pharmaceutical Producers of India, says that the canalisation of raw material imports through STC and IDPL has not helped ease the scarcity situation in the drug industry. If canalisation and pool pricing scheme are to succeed, it is essential that the day-to-day working of these organisations should be made more efficient and the prices of raw materials reduced. Alternatively, the previous system by which import licences were issued to actual users should be reintroduced.

less demand for fertilisers but promotional efforts to stimulate consumption have been inadequate. Until 1968 the total availability of fertilisers from indigenous production and imports was considerably less than the actual demand. The entire distribution of nitrogenous fertilisers was controlled by the fertiliser pool. The agencies for distribution were the State Governments. Some States appointed private parties for this purpose, and in others distribution was exclusively through co-operative agencies. Under this arrangement the element of competition was lacking; there was no motivation to boost fertiliser consumption. In fact, promotional efforts were discouraged as it was far from certain that additional supplies would be available to meet any increase in demand that might result from such efforts. Thus the potential for growth in fertiliser consumption remained undeveloped.

India will have to produce an additional 40-50 million tonnes of foodgrains in the next seven to eight years to feed her growing population without depending on imports. This will require the use of about seven million tonnes of plant nutrients, nitrogen and phosphatic fertilisers. In national interest it has to be seen that consumption of fertilisers on this scale is achieved. This is possible only if a package of measures is introduced. These include agricultural extension services, including soil testing and demonstrations to bring home to the farmers the benefits of optimum fertiliser application, farmer training programmes, stocking of fertilisers well in advance of the manuring season so that cultivators can get them in time, marketing of fertilisers near centres of consumption, efficient system of transportation and storage, and provision of adequate credit facilities.

Above all, indigenous production of fertilisers should not be allowed to lag behind. The experience of the sixties has shown that India should not rely too much on foreign credit, collaboration and capital for building up the fertiliser industry and, as far as possible, should go it alone. Foreign exchange constraints should not be allowed to come in the way of increasing fertiliser production. Reasonable foreign exchange should be allotted to not only the public sector but also to the private sector for setting up fertiliser units or expanding the existing ones.

An important reason why some private sector projects fell by the wayside is that the sponsors found it difficult to secure foreign exchange or arrange foreign collaboration. Between 1966 and 1970 the Government issued letters of intent or licences to 12 private enterprises for setting up fertiliser units but only one, namely, the Goa project of Birlas, is under construction and is expected to be commissioned by 1972. Of the remaining projects Ghaziabad (Modi Spinning and Weaving Company), Mirzapur (Hindustan Aluminium Company), Mathura (Kalinga Tubes) and Visakhapatnam (Occidental Petroleum Corporation) have failed to materialise because of the inability of the parties to arrange foreign exchange and collaboration. Haldia in which Phillips Petroleum Company showed keen interest at one time and eventually backed out has now been taken up in the public sector. These projects were licensed for a total capacity of 8.5 lakh tonnes.

The loss must be made good by taking

up new projects and expeditiously clearing those submitted to the Government, including the Mithapur project of Tatas, Coromandal's Visakhapatnam expansion scheme, the Sheva Nhova project of Dharamsi Morarji and the Tuticorin scheme of the Southern Petrochemicals Corporation. In addition, the Government has now received proposals from Delhi Cloth Mills for expanding its Kota unit and from the Punjab State Industrial Development Corporation and Bharat Steel Tubes for setting up fertiliser units at Bhatinda and Panipat respectively.

For its part the public sector must improve its performance. There has been some improvement last year but all the units still work far below their capacity. Whatever the causes—inadequate supply of raw materials or shortage of power or inefficient management—these must be resolutely tackled and overcome. Only by optimum utilisation of installed capacity can fertiliser prices be brought down. This is essential if consumption targets are to be achieved, and on increased consumption of fertilisers hinges sustained increases in food production. The public sector with the lion's share of fertiliser capacity—it has already eight units with a total capacity of 6.84 lakh tonnes in terms of nitrogen in production and another nine with capacities aggregating 14.9 lakh tonnes are in various stages of construction—has a major responsibility in this regard. □

COAL

Ships to the rescue of railways

CALCUTTA.

THE Union Minister for Shipping, Mr Raj Bahadur, has announced in Bombay that the Railway Board has finally agreed to a long-term arrangement with the coastal shipping for the movement of coal. For the next 10 years, the coastal ships will be assured an annual cargo of five lakh tonnes. Every month, 20,000 tonnes of railway coal would move from Calcutta to Tuticorin and another 20,000 tonnes from Calcutta to west coast. The Railway Board is not being generous in coming to this arrangement. It seems to have dawned on it that the railways are not in a position to carry the coal according to a planned schedule demanded by needs of industries and other consumers in various parts of the country. Mounting pit-head stocks at collieries while consuming industries in northern and western India are very short of coal, obviously shows that the movement continues to be extremely unsatisfactory. Since it is the railways which have taken upon themselves the responsibility of carrying coal over long distances, it naturally devolves on the railway authorities to look after the planning and co-ordination of coal transport. And this must be the reason why it is now ready to enter into a long-term arrangement with the coastal shipping.

The pit-head stocks at the moment amount to nine million tonnes, roughly one and a half month's production of the coal industry, and some three million tonnes in excess of the normal stocks held by the industry at any time. In other words, stocks are now 50 per cent more than

normal. To some, the stocks may not appear excessive; the railways understandably have been trying to play down the crisis by overemphasising the point that they have now more wagons with them than they need, and that the wagon supply to collieries has been considerably stepped up. But the point is that an industry that has been experiencing serious financial difficulties despite the reported advice of the Reserve Bank to nationalised banks to liberalise credit facilities, finds an excess stock of three million tonnes very burdensome.

The industry is estimated to have produced only 77 million tonnes in 1970-71, which is about three million tonnes less than in 1969-70, and this must be entirely due to the fact that the stocks began to rise above the normal limit some seven to eight months ago. Among the various factors contributing to the decline in production and increase in stocks, insufficient wagon supplies appear to have been a major one. Coal movement by the railways fell short by 17 per cent of the target fixed for 1970-71.

The railways, of course, were themselves under the pressure of various factors which affected their capacity to release more wagons for the coal industry. According to the General Manager of the South Eastern Railway, on some 33 occasions during the year, train services were interfered with, leading to loss of thousands of wagons in loading. The Orissa "bandh" in July 1970 resulted in loss of nearly 5,000 wagons in loading. The three Bengal "bandhs" of the year caused the S.E. Railway a loss of loading potential of about 6,500 wagons. The jute mill labour strike, the strike at Visakhapatnam port and wild cat strikes on different sections of the railways, were the other reasons which completely upset the SER's wagon turn-round programme.

However, now that the situation has begun to appear more normal, concerted efforts should be made by all concerned, particularly the railways, to move coal from the pit-heads at more than the normal rate to clear up the accumulation well before the monsoon, and then ensure a supply of the requisite number of wagons to the collieries that they would need to move their production.

It is good that the coastal shipping will now be harnessed for the transport of coal. True, the cargo of five lakh tonnes of coal promised to this sector every year is almost five times of what it moves currently. But an expert committee of the National Shipping Board had suggested that the coal cargo assured should be as much as 7.5 lakh tonnes. Apart from the volume of cargo, coastal shipping has also a grievance about the permitted coastal freight rates which it considers as unremunerative. This was why even the 10 ships ordered from Rumania have been designed to carry coal on the coast as well as bulk cargoes of sulphur, manganese ore, fertiliser, iron and steel in the overseas trade with a view to enabling their employment on foreign routes, if the need arises. It could be that if the freight issue is not resolved coastal shipping would not be very enthusiastic about carrying coal, and in that case the projected efforts to remove the bottleneck in the transport of coal might not bring significant results. □

The Ennore thermal plant

A general view of the Ennore thermal plant.

Power development in Tamil Nadu

By C. G. Rangabashyam

—A SURVEY

VIEWED against the background of power development in other States in India, the development of energy conversion and utilisation in Tamil Nadu have made a big headway, not only by regional standards but also by national standards.

Today Tamil Nadu leads all other States in India in rural electrification. By way of utilisation of electrical energy, Tamil Nadu occupies the second position in India. In the matter of utilisation of power for irrigation Tamil Nadu ranks first in India.

Bulk of the power produced in the State is utilised in industries in the urban areas and agriculture in rural areas. With the wide net-work of transmission and distribution lines extending over the length and breadth of the State, Tamil Nadu supplies about 50 per cent of its power to industries, 23 per cent to agriculture and the balance for domestic and commercial purposes. About 20 lakhs of consumers are being benefited by Electricity, about 75 per cent of whom directly by the Board and the rest through five Municipal and seven licensees.

Power generation in Tamil Nadu until about 1908 was confined mainly to a few tiny plants in tea estates run on water power and to the small hydro installation at Katteri in the Nilgiris. The Government Electricity Department was formed in 1927 and development of power resources in the State was initiated with the commencement of work on the Pykara scheme in 1929. Since then there has been phenomenal development in the generation and utilisation of electric power in the State.

As power is indispensable for the development of agriculture and industry, special importance was assigned to pro-

grammes for generation of power in the Five-Year Plans.

At the beginning of the First Plan, there were hardly three hydel projects and two thermal stations with a total installed capacity of 156 mw. During the First Plan period, the capacity was increased to 256 mw. During the Second Plan period, there was more than doubling of installed capacity. By the end of the Second Plan, it was clear that the major weakness of the power system in the State apart from pronounced shortage of power was the preponderance of hydel capacity which rendered the grid particularly vulnerable in the years of poor rainfall. With a view to overcome the shortage and correct the imbalance, both hydel and thermal power stations were planned and taken up for execution. As a result, the Third Plan period witnessed commissioning of 6 units at Kundah, 4 units in the Mettur Tunnel Scheme and 1 unit (4th unit) at Periyar Power House and 1 unit in the Parambikulam Aliyar Project at Sarkarpathy and also commencement of work on the 340 mw Ennore thermal power station and on the addition of 30 mw at Basin Bridge, Madras. Thus, at the end of the Third Plan period the installed generating capacity in the State went up to 1070 mw apart from 300 mw in the thermal station at Neyveli.

Today here are 15 hydro-electric stations in the State working with a total installed capacity of 1114 mw and three thermal stations (at Basin Bridge, Madurai and Ennore) having a capacity of 251 mw. Besides these, the thermal station at Neyveli utilising lignite, (brown coal) as fuel has a capacity of 600 mw. The total installed capacity of the Tamil Nadu grid is therefore 1965 mw (including 600 mw at Neyveli). Of the present total installed capacity about 42 per cent is thermal generation while the balance 58 per cent is of hydro generation.

Mr. Rangabashyam is Chairman of the Tamil Nadu Electricity Board.

With the completion of the following power stations on which works are rapidly progressing, the installed capacity of the grid is expected to be increased to 2185 mw during the year 1971-72.

1. Sholayar Power House II in Parambikulam-Aliyar Hydro Electric Project (70 mw).
2. Kodayar Power House 2 under Kodayar Hydro Electric Project (40 mw).
3. The 2 x 110 mw units in Ennore Thermal Scheme (220 mw).

Almost all major hydro resources have been utilised and the State has only some small hydro schemes under execution or investigation. In respect of thermal power also Tamil Nadu is unfavourably situated as it has no coal fields except the poor quality brown coal at Neyveli which is also being exploited for power generation. The demand of the grid is now of the order of 1163 mw. Even though the installed capacity is 1965 mw the effective generating capacity is much less, as hydel stations like Sholayar, Mettur, Papanasam, Periyar and Parambikulam are to be operated to meet the requirements of irrigation. During non-irrigation season which lasts upto 5 months in Mettur and 3 months at Periyar and Papanasam, there is very little or no power generation from these hydel stations. Added to this, vagaries of monsoon in the past led to periodical and frequent imposition of power cuts. Hence, the ratio of hydro and thermal generating capacity which was 80 to 20 has been transformed to 70 to 30 at the end of the Third Five-Year Plan. With the commis-

sioning of the Ennore thermal power station, this ratio is expected to be improved to 52 to 48 by about a year's time.

With the green revolution and growing industrialisation, power demand is constantly going up and at the end of the Fourth Five-Year Plan the gap between the firm capacity of the Grid and the anticipated demand is expected to be of the order of 500 mw. The Kalpakkam atomic power plant can provide relief only later to an extent of 400 mw. According to the assessment made by the Central Water and Power Commission the neighbouring Andhra Pradesh and Mysore States will also be deficit in power while Kerala only may have surplus of about 200 mw. Kerala's surplus power would be in demand from other neighbouring States also. In order to bridge the gap, it is necessary to set up large thermal and nuclear power stations before the end of Fifth Plan. Realising the paramount need and urgency to reduce this gap between the capacity and demand for power, the Government of India has been moved to take up the following works:

- (i) Second unit of nuclear power station at Kalpakkam (200 mw).
- (ii) Second mine cut and a second thermal power station at Neyveli (900 mw) and
- (iii) Second nuclear power station at Tuticorin (600 mw).

Electricity is both a service and a consumer goods but it is unique in that it is perhaps the only product that is almost used at the same instant as it is manufactured. The energy generated in the

Board's generating stations and purchased from the neighbouring States was 1,063 million units, at the end of the First Plan, which increased to 2214 mu at the end of the Second Plan. At the end of the Third Plan, the generation and purchase of power was 4041 mu.

In 1970-71, the total power consumption of the State was 6189 mu, out of which 3603 mu or 59 per cent were generated in the Board's generating stations. Out of the balance of 2586 mu, 1,523 mu were purchased from Neyveli, 733 mu from Mysore, 328 mu from Kerala and 2 mu from Andhra.

Table 1 : Utilisation of electricity in 1969-70

Category	Electrical energy in mu used	Percentage
Industries	2269	50.0
Agriculture	1037	23.0
Bulk supply to :		
Licensees	441	9.7
Commercial	301	6.6
Domestic	225	5.0
Sales to other States	98	2.2
Railway traction	82	1.8
Other miscellaneous like street lighting, departmental works etc.	79	1.7
Total	4532	100.0

The power which is generated at 11,000 volts pressure in the generating stations, is stepped upto 110,000 or 230,000 volts for transmission to the remote sub-stations where the pressure is stepped down to 11,000 or 22,000 or 33,000 volts for distribution. To develop the available power resources and make the power available in a rational way at minimum cost and optimum efficiency, over the whole State, the Electricity Department, since its inception, has had its objective the creation of an electric power grid covering the whole State.

The grid has been planned and constructed in such a way that ultimately it would link up the several hydro-electric and thermal stations in the country and convey power to consumers in all villages and towns through a net-work of transmission and distribution lines at reduced cost and in abundance.

The electrical power generated in the Board's generating stations and purchased from other sources during 1969-70 have been utilised under the various categories as listed in Table 1.

A major portion of the power produced as may be seen from the above, is utilised in the industries. Tamil Nadu is now occupying a prominent place in the Industrial map of India, because of the industrial progress it made on account of easy availability of power. Petro-chemical complex around the city, cluster of industries like aluminium, chemicals, papers, plastics etc around Salem-Mettur area and high pressure boiler plant at Tiruchy are the direct result of availability of electric power at these locations. The power consumption for industries during the past two decades has recorded an eight-fold increase, indicating a phenomenal development in the industrial sector.

The next most important use of electricity, as at present is in providing energy for irrigation pumping. 23 per cent of the power energy sold in the State, is being used for agricultural purposes and

BHEL Boiler Plant puts heart and soul into the Ennore Thermal Power Station

A new era is born in and around the city of Madras — launched by the 450 MW Ennore thermal power plant.

BHEL is proud to have helped plant this new power for the prosperity of agriculture and industry in this region.

The Ennore Plant in its first stage consists of two 110 MW boilers and two 60 MW boilers. BHEL High Pressure Boiler Plant has supplied the 60 MW boilers designed and built in its factory at Tiruchi, one of which has been commissioned already, the other one being commissioned now. The foreign exchange saved will be about Rs. 66 million including the Rs. 28 million worth

turbines supplied by the BHEL Hyderabad factory.

The two 110 MW boilers have been supplied by Czechoslovakia. Even here, BHEL-Tiruchi's contribution is worth Rs. 25 million.

The fifth boiler of 110 MW, estimated to cost about Rs. 60 million, will be designed and built by BHEL.

In all, the Ennore Project stage-I is worth Rs. 450 million in which BHEL shares about Rs. 150 million in boilers, turbines and ancillary equipment.

Tremendous engineering skills and ceaseless labour have gone in to make BHEL's participation an exemplary success.

30,000 drawings translated into components of iron and steel, 400,000 hours of labour, 3,000 tonnes of finished components in the form of pressure parts, structures, fans, etc., for each 60 MW boiler.

Each BHEL 60 MW boiler will utilise about 1,000 tonnes of coal every day to convert 260,000 litres of stored water into power every hour.

More than all this, BHEL-Tiruchi in association with the sister units at Hyderabad and Hardwar, is helping to create new and more power to sustain our country's progress.

Other thermal power stations that will be equipped with BHEL high pressure boilers amounting to a value

of Rs. 1,800 million: Harduaganj (U.P.) - Delhi - Badarpur (Delhi) - Kothagudam (A.P.) - Obra (U.P.) - Patrathu (Bihar) - Namrup (Assam) - Bhatinda (Punjab) - Ukai (Gujarat) - Panki (U.P.) - Koradi (Maharashtra) - Bhat (Gujarat).

creating the power to prosper

BHEL-6100

Thermal power from Ennore

By T. K. Vishwanathan

OUT of the 18 power stations in Tamil Nadu only three, namely, Basin Bridge, Ennore and Neyveli, are thermal. The rest are fed by either irrigation reservoirs or hydro reservoirs. Against the total generating capacity of hydro stations of 1,324 mw, thermal capacity is as follows:

	Generating capacity (mw) as on 31-3-1971	Generating capacity (mw) after extensions are completed
Basin Bridge ..	60	75
Ennore ..	120	450
Neyveli ..	600	600
	780	1,125

Making an allowance of 16½ per cent for annual overhaul of boilers under statutory Boiler Regulations (high-pressure boilers being out for two months in a year), the nett thermal capacity is 938 mw and hydro capacity is 1,324 mw. The present power demand of Tamil Nadu Grid is 1,250 mw, while the present units generated per day is about 200 lakhs.

By 1972 it is programmed to electrify

Mr Viswanathan is Superintending Engineer, Tamil Nadu Electricity Board (Operation and Maintenance), Ennore.

With the Best Compliments

all the villages in the State. With the development of industrial loads both small-scale and heavy industries like steel, fertilisers and chemicals, the power demand is expected to shoot up to 2,200 mw by 1973-74.

We have almost exhausted all the hydro resources. Hydro-power capacity cannot be depended upon throughout the year as it depends upon monsoon rains and irrigation discharge. During the years when monsoons are weak and during non-irrigation seasons when the discharge from irrigation reservoirs are stopped, the Tamil Nadu Grid has to depend upon thermal power as a back-up. Further, as hydro resources have been exhausted, new thermal power stations of high capacity have to be put up not only as thermal back-up but also to cater to the increased demand of the Grid. Hence it was proposed to build a big high-pressure thermal station at Ennore.

Ennore was selected for putting a big thermal station for the following reasons:

(a) Tamil Nadu has no coal resources except lignite (brown coal) at Neyveli whose first mine-cut is utilised in full. The nearest place for coal is Singareni collieries near Hyderabad which is 480 miles away. Ennore is the nearest place in Tamil Nadu from Hyderabad on the broad-gauge railway line.

(b) Ennore is at the estuary of the river Kottalier falling into the sea. Hence sea water (drawn through the estuary of the river) can be used for cooling the condensers of the turbine, thus eliminating costly cooling towers (either natural draft or induced draft) for the circulating system of the big thermal station.

(c) The required raw water for boilers is available nearby at a place called Minjur from deep underground wells. The requirement of water for the full capacity of the power station is 10 lakh gallons per day.

(d) The present load in Madras city and its industrial complex suburbs like Ennore, Ambattur, Avadi and Guindy is of the order of 150 mw and is likely to go upto 300 mw. The total load of Madras city and the surrounding districts of Chingleput and North Arcot will come up to about 500 mw for which supply has to come from the power stations at Kundah, Neyveli and Mettur, if there are no big power stations in Madras city. Transmission of a large block of load from far off power stations involves loss of energy as well as low-voltage conditions in the Madras city area which is the farthest. The generating capacity of the Basin Bridge power station cannot go above 75 mw because of the limitation of circulating the water-cooling system. Hence a 450 mw station was planned at Ennore so that both Ennore and Basin Bridge can cater to the full load requirements of Madras city and the surrounding parts of Chingleput and North Arcot at proper voltage conditions without any loss of power. An additional big thermal station needed to meet the requirement of the Grid is put at the load centre.

The total generating capacity of the Ennore station is 450 mw. The first two units are of 60 mw each, while the boiler capacity of each unit is 260 tons/hr, with the steam pressure being 96 kg/sq cm and steam temperature 540°C.

The Boiler burns pulverised coal. Boiler controls are by electronic Regulation system. The turbine has two cylinders (HP and LP). The generator is natural air-cooled and generation is at 11 kv and is stepped up to 110 kv and pumped to the Grid. The high-pressure boiler and TA set for each unit are supplied by Bharath Heavy Electricals. The generator transformers, 63,000 kva 11 kv/110 kv for each unit, are supplied by Heavy Electricals, Bhopal.

The major auxiliaries are run at 6.6 kv, the biggest auxiliary being the boiler-feed pumps of 1800 kw each. The 6.6 kv switchgears are of air-blast circuit breakers, with a rapturning capacity of 4,500 mva. The 6.6 kv switchgears, the complete control Room equipment to control both the boiler and the TA set, instrumentation, and relays both for control and protection, are supplied by Skoda, Czechoslovakia.

The third and fourth units are supplied by Skoda except for the non-pressure parts of boilers which are manufactured by Bharath Heavy Electricals. The fifth unit will be completely indigenous, to be manufactured by BHEL. As in the 60 mw units, the major auxiliaries are at 6.6 kv, the biggest auxiliary being the boiler-feed pumps of 3,500 kw capacity each. For the third and fourth units, all the 6.6 kv gears and control-room equipment for boiler and TA sets, instrumentation, meters and relays are supplied by Skoda direct. For the fifth unit, instrumentation, control equipment, meters and relays will be indigenously manufactured at Kotah in Rajasthan.

Sea water is used for cooling the Condensers of the turbines. A pump house has been built on the bank of river Kottalier, with six pumps of 1,000 kw capacity each to pump 720 cft/sec or 60,000 tons/hr sea water for the full capacity of the power station.

At the estuary of the river the sand bar is normally found closed except for about three months in a year (October, November and December) during the north-east monsoon period, when the sand bar gets opened. To draw 720 cusecs of water from the sea through the estuary, the sand bar has to be kept open throughout with enough cross-section. Hence an RCC jetty of 304 metres length with an approach jetty has been built into the sea at the estuary. Two sand pumps with a capacity 375 HP each (pumping capacity 175 tons per hour) will be erected on the RCC jetty to pump out the sand at the sand bar opening and keep the sand bar open throughout. Further, there are eight Booster pumps of 40 HP capacity each to throw away on the side shores the sand slurry pumped by the sand pumps. The cost of the RCC jetty, complete with sand-pumping equipment and control gears, comes to Rs 60 lakhs. The sea water after cooling the Turbine condensers is returned to the sea through RCC conduits.

For the Ennore power station at full capacity we require 500 tons of slack coal per day from Singareni collieries, which is the nearest colliery for Tamil Nadu. Because of the heavy requirements of coal, separate coal mines have been reserved for Ennore and double railway lines have been laid from Singareni to Vijayawada. □

The Indian paint industry

—A SURVEY

Technological developments

By R. K. Marphatia

THE paint industry is unlike many other industries which can be clearly classified as heavy industry such as heavy chemicals or consumer products. It has a dual role—decorative and protective, and sometimes a combination of both. A second characteristic of the paint industry is that it is a service industry and as such it adapts itself to the requirements of the customer industries. As a corollary it

would follow that its final performance is not entirely within the industry's control and is dependant in the manner in which the finished product, paint, is applied and used by the customer industries. These special features of the paint industry should be borne in mind while considering the technological development of the industry.

While considering the technological developments of the paint industry it would be appropriate to start from the finished product end—the customer's viewpoint. The general belief is that paint is

an old tradition-bound industry where art and experience have predominance over science and technology. This was true of the industry prior to independence, but in the past two decades the industry has progressed considerably, particularly so on the technological side.

People are familiar with paints for homes and buildings. In the past, these used to be painted with dry distemper or oil-bound distemper on the interior and zinc stiff in boiled oil on the outside. Now plastic emulsion paint based on synthetic resin has technologically displaced the distempers and is widely used. Its main merits are that it is quick-drying, free from typical paint smell, it is easy to clean and really washable, and it has got a much longer life. On the outside of buildings,

zinc in oil paint has been replaced by alkyd-based synthetic enamels which have better finish and longer life.

Household articles such as fans are now painted with synthetic stoving enamels and the quality of finish is comparable to that of imported products. Indeed, the quality of the finish should be acceptable abroad considering the good success Indian fans have achieved in the export markets. Similarly, refrigerators use modern epoxy primers and synthetic stoving enamels which perform well under arduous Indian kitchen conditions. In the office, the typewriters are finished with epoxy stoving finishes. To take but one example from the transport field, the cars in the olden days used to be traditionally finished with nitrocellulose. Now these

are replaced by synthetic stoving enamels which have better durability and help to increase the productivity of the car manufacturing units.

How did the industry achieve this improvement in its products? The paint industry is a raw material intensive industry and the quality of the finished products is dependant on the purity and variety of raw materials out of which they are made. In the earlier years, the paint industry mainly used oils such as linseed oil, and natural gums such as Congo Gum or phenolic resins to produce its main products. This has now changed radically and the workhorse of the paint industry are alkyd resins. Indeed, oil has not only become a scarce but an expensive raw material as Indian linseed oil prices are 100 per cent higher than those in Western countries.

Alkyd resins are further supported by newer synthetic resins such as melamine formaldehyde resins, urea formaldehyde resins, epoxy resins, polyvinyl chloride and acrylic dispersions, etc, which are made in the country. In the pigment range, except rutyl titanium dioxide and special grades of carbon black, most of the other pigments required to provide a wide variety of shades are made in the country. This development of the infrastructure for the indigenous manufacture of pigments and synthetic resins which go to make paint is one of the major technological achievements of the past two decades.

Paint is a product which has a story in two parts. It is made by the paint industry but has to be applied and used by customer industries before the finished painted article emerges. Thus, the application methods, particularly in industrial paints, are as important as the manufacturing methods. Here, the general public is familiar with the conventional application methods such as brushing, spraying, dipping. However, now the industry has developed newer methods of painting such as airless spraying and electrostatic spraying. Airless spraying gives a faster rate of application and reduces labour requirements considerably and so puts up the productivity of workshops. Airless spraying is ideally suited for painting of large flat surfaces such as railway coaches, and if properly adopted, will put up the productivity of paint shops of railway coach manufacturing units. Electrostatic spraying, in which the paint particles are charged to high voltages of about 80,000 volts, reduces paint losses during application to the barest minimum and also permits assembly line production painting to be achieved. Electrostatic painting is particularly suitable for painting products of light engineering industry where it will improve the finish and reduce painting cost and thus assist in the country's export drive. As far as the householder is concerned, freon operated aerosol containers have been put on the market which would enable him to conveniently spray small articles around the home. These newer methods have been recently introduced in the country and their wider adoption will certainly give a boost to the paint industry's image as a modern industry.

Synthetic resins and varnishes form an integral part of finished paint and are invariably made in a paint factory. The bane of the paint industry has been the

Bullows

Is your paint finish as good as your product?

Take a good look. The closer you look the more you will realise your product deserves the best possible paint finish. If it looks well it sells well. Only Bullows can give you that outstanding finish because only Bullows make spray painting equipment of outstanding quality backed by unexcelled service. Whatever your product, if the finish is important, Bullows have the answer.

Bullows offer spray guns, paint containers, pressure regulators, Nopump spray booths and complementary equipment for every type of painting application. All Bullows spray painting equipment is reliable, good looking, exceptionally efficient and is designed to give your product that outstanding finish. For further particulars write today to Jost's Engineering Company Limited, Dept. B4, 60 Sir Phirozeshah Mehta Road, Bombay 1.

small batch size in which synthetic resins and media have been made. Now the industry has changed over to bulk plants for manufacture of synthetic resins and varnishes. This gives the advantage of lower production costs, uniformity in quality and greater productivity.

Paints used to be made conventionally on single and triple roll mills and edge runners. The industry has progressed from roll mills to ball mills and recently the latest type of grinding equipment, the sand mill, has been introduced. A wider usage of sand mills is expected considerably to improve the productivity in the paint factories and this will help reduce the manufacturing costs. From the manufacturing standpoint, this has been a major technological development in the Indian paint industry in recent years.

No industry can hope to progress without proper research and development work. Further, this is dependant on the use of modern tools and techniques in carrying out actual laboratory work. The paint industry being a service industry has already developed specialised tests to simulate conditions prevalent in a wide spectrum of customer industries.

The industry has been doing intensive work on utilisation of indigenous materials such as cashewnut shell liquid, bhilwan nut liquid, shellac, rosin, etc. In addition, the industry has also started development work on newer materials such as isocyanates, acrylic resins, etc. This will enable the industry to take full advantage of newer materials and thereby upgrade the quality and widen the scope of its products.

Metal decoration

By F. J. McMELLAN

METAL decoration is one of the few areas in which the interests of the printing ink industry and the paint industry merge. Whilst the general basis for formulation is often very similar in the two industries, the widely different end applications make the two technologies completely different except in this specific field. The provision of roller coatings, pigmented and unpigmented, for the metal-decorating industry is a natural extension of ink-making, since the relationship between these coatings and the inks printed under or over them largely predetermines the performance of the entire decoration. Without prior intimate knowledge of roller-coating formulations it would be difficult, if not impossible, for inks to be matched to meet the varied and often very specific requirements.

Mr McMellan is Technical Controller of Coats of India Ltd, Calcutta.

Equally because many roller-coating formulations are closely related to modern and traditional paint systems, the involvement of the paint industry in the metal decorating field is also a natural corollary. It is however, inaccurate to describe such roller-coatings, as paints or to think of them in such terms. They are specifically formulated for application by roller-coater to the various substrates used by the metal-decorating industry. Tinplate is the most common of these, but it is not exclusive, and aluminium, lead, black-plate, chromium surfaced steel, etc, may all be encountered. Indeed, the major ink companies have built up a specialised expertise in this field that would be difficult to equal. The duality of the paint industry and the printing ink industry as suppliers to the metal-decorating market is most marked in the general line, body-can sector and becomes less pronounced in other more demanding applications such as pilfer-proof closures, etc.

The metal-decorating industry comprises a very large section of the packaging industry generally, covering metal containers of all types and metal closures for glass bottles. Protection of the base metal from corrosion by the package's contents and the effect of atmospheric conditions on the printed design of the package are two primary functions of metal-decoration. The preparation of suitable coatings and the method of application are initial objects of study due to the high-speed requirements of modern filling and handling methods. Metal-coatings, as supplied by the ink manufacturer, fall into two distinct classes. Roller-coatings, pigmented or unpigmented, comprise the first class, whilst tin-printing or tube-printing inks applied by conventional offset litho or dry offset are the second. The latter are generally used to provide the external decorative design.

If we consider initially the roller-coating, what functions must this fulfil? The metal sheet forming the container may be either black-plate, tin-plate or aluminium, etc. There are other possibilities as well. Even within the indicated substrates, tin-plate is low carbon mild steel strip coated with tin but this can be applied by either dipping in molten tin or electrodeposition. Both processes give differing products in terms of their relationship to the decorative coatings applied to them. Electrolytic tinplate exists in five recognised commercial finishes—bright, matt, silver, stone and 35B (shot-blast). Double reduced tinplate leads to decreased gauge for a given application, serving to reduce the cost to the can-maker. Non-tinned steels are also used, as has been previously indicated, and these include black-plate and chromium/chromic oxide coated plates. So even the basic substrates require a fairly extensive knowledge since all pose different criteria from the viewpoint of the decoration applied. That introduces a few variables.

Then the metal sheet is roller-coated with an internal lacquer which remains on the inside of the container after it is fabricated, to withstand the action of the contents. In order to withstand corrosion caused by emulsion paints, barrier creams, concentrated detergents and the like, the lacquer may have to be resistant to acid, alkali, fat, detergent, soap, etc. Moreover it may have to withstand the effect of subsequent cooking in the container of raw foods of all types. These may be acid in reaction, or give off sulphur products due to protein breakdown, etc, during the cook-

Phone: 25151

ing process. As well as these demands for various resistant properties, the coating must combine these with excellent adhesion and electricity so that it withstands the body-forming and stamping operations. The external decoration can consist of size, roller-coating enamel, inks for printing the design and a final over-varnish, although on occasion some of these stages are omitted. The various coatings and inks may be submitted to a succession of stovings at varying temperatures. Therefore the products must not yellow, or change shade, or embrittle during the subsequent stoving operations. Further variables are to be considered when formulating metal-decorating products.

The final processed sheet has to withstand the effects of the making-up operations in the actual manufacture of the container or closure, and in the case of foods cooked in the package, retorting or pasteurising processes, without breakdown. Stamping and forming operations make heavy demands on the decorative system, particularly when the container or closure is deep-stamped or deep-formed. Closures are subjected to additional screwing and knurling operations. During all these varied and exacting mechanical processes, the coatings are stretched and abraded but

the requirement is that no adhesion breakdown occurs, no lifting of the various coating layers, no scoring, cutting or rubbing by the dies, etc, and no damage during sorting and packing operations.

In view of all these demands it is not surprising to find that a wide range of media find a use in metal decorating products. Epoxy, acrylic, vinyl, melamine systems are used in differing applications as well as the more traditional alkyd, and oleo resinous formulations. Roller-coatings for metal-decorating applications can be based on almost any of the established surface-coating resins and systems. This fortunate situation does not exist for the inks used in decorating containers, tubes and closures, due to the limitations imposed by the printing machinery employed.

It may not be widely appreciated that the current success of the offset litho printing process owes much to the tin-printer. Long before its application to paper and board work, the offset principle had been thoroughly developed for printing on sheet metal. Such material cannot be satisfactorily printed by direct impression of a metal plate because of the difficulty in achieving good contact between two metal surfaces and the damage that would be suffered by the litho plate. Therefore the

resilient transfer cylinder came into being. As well as the usual problems of drying and keying of the inks to the underlying coatings or directly to the metal surface itself, the offset litho process itself presents further demands for the ink to meet. There is a double transfer of ink, from plate to blanket and blanket to metal substrate (coated or uncoated), which means a very thin ink film is deposited, but this must have the colour strength required for the package design. The ink is in contact with water which provides another critical relationship.

In view of the demanding requirements of the fabrication processes, the printing and coating processes, the stoving, retorting and all the many and varied processes encountered when dealing with the business of metal-decorating, it is not surprising that supplying coatings and inks requires specialised knowledge and expertise. With the ever-increasing trend for high output speeds and improved fabrication techniques, the surface coating requirements can only be met by intensive research and development effort, and a high level of laboratory control during all stages of manufacture. No doubt, the paint and printing ink industries which cater for this market will continue to meet to the challenges offered.

NOCIL CHEMICALS MAKE ALL THE DIFFERENCE

NOCIL solvents impart superior gloss, improve flow and blush resistance, reduce costs in surface coatings.

NOCIL also manufacture a wide range of other chemicals and plastics like Ethylene Oxide, Glycols, Alcohols, Ketones, PVC resins and compounds, for a variety of uses in industry.

NOCIL's modern technology and large-scale operations mean assured and uninterrupted supplies of dependable quality chemicals.

Whatever you produce, you can be sure NOCIL chemicals will make a lot of difference.

NATIONAL ORGANIC CHEMICAL INDUSTRIES LIMITED

Sector House, Dr. Ambedkar Road, Worli, Bombay 18 WB

By A Correspondent

ed great opposition from the Indian paint industry was located near Calcutta and Bombay. Even upto the Second World War the number of paint factories, many of which were subsidiaries of companies in the UK, did not exceed a dozen. Except ordinary oil and pigment mixtures most of the paint materials were imported from the UK. The paint industry mainly consisted of the paint import trade. Strange as it may sound, even linseed oil, in those days, was being imported despite the fact that India has been the home of linseed oil. The Indian entrepreneurs who started paint factories had to face a situation in which even Indian dealers refused to stock their products while displaying British manufactured paints and varnishes.

The Indian paint industry has now over 600 units. Most of these are small, while in the organised sector there are nearly 150 factories. At the beginning of the First Plan the capacity of 50 major units was estimated at about 65,000 tonnes on the basis of double-shift working for 300 days per annum. The production of paints on

Manufacturing was estimated at 34,000 tonnes in 1955. In the First Five-Year Plan, the capacity target for paints and varnishes was placed at 70,000 tonnes and annual production target at 60,000 tonnes. By the end of 1955, the annual production could not cross even the 40,000 tonnes mark. The Second Five-Year Plan did not envisage any change in the targets of capacity or production. At the end of 1960, the production was 59,000 tonnes. The Fourth Plan envisages a 1.40 lakh tonnes production. The production of 17 major units in the country was about 60,000 tonnes in 1969. The per capita consumption of paints in India is low as compared to other countries.

The number of products which were previously imported are now available from indigenous manufacturers. However, their quality is not up to the mark. In some cases the quality is different from the products with which the paint formulator was conversant. This leads to difficulties from the point of view of compatibility, application, finish, processing, storage or performance.

COMPANY MEETING

Bayer

Bayer (India) Limited

SPEECH of the Chairman, Mr B. M. Ghia, delivered on 21st April, 1971, at the Thirteenth Annual General Meeting of the Shareholders.

FRIENDS!

I have great pleasure in welcoming you to the Thirteenth Annual General Meeting of the Company.

Your must have already received the Annual Report of your Company for the year 1970. With your permission, I shall take it as read.

I am sure that you would have been happy to notice from the report that your Company's performance in 1970 was laudable. Sales increased by 29 per cent over the previous year and reached Rs 7.42 crores. Depreciation amounted to Rs 55 lakhs, as against Rs 50 lakhs in the previous year and the Statutory Development Rebate Reserve came down to Rs 54 thousand as against Rs 11 lakhs in 1969. The Company made a net profit of Rs 1.06 crores as against Rs 41 lakhs in the previous year. Consequently the loss carried forward has now been reduced to only Rs 17 lakhs— from Rs 1.23 crores. The total reserves of the Company at the close of the year amounted to Rs 1.25 crores.

We hope to improve the favourable trend in the sales as well as in profits during the year 1971.

It is gratifying to see that the **Rubber Chemicals Division** increased its sales in spite of the stagnation in the tyre industry due to prolonged strikes and strained labour relations in that industry. Rubber consumption was thus not increasing for the first time in a decade but it is bound to gather momentum with the restoration of normal conditions.

We introduced three new rubber chemicals in our manufacturing programme during 1969 and in 1970, four new products were added. We are thus doing our best to ensure that the requirements of the rubber industry are increasingly met by indigenous manufacture.

At the last Annual General Meeting, I informed you that your Company had applied for an expansion licence for rubber chemicals. A Letter of Intent in this connection was received in December 1970. This expansion is intended not only to increase our production capacity for the existing products in order to meet the growing consumption, but also to introduce some new products and intermediates which are now being imported. There are however certain difficulties in accepting the conditions stipulated in the Letter of Intent which we shall be discussing shortly with the Government.

Now, referring to the indent business of the **Chemicals Division**, you will be glad to hear that we have done well, although the overall import of chemicals into the country continued to decrease.

I have particular pleasure in informing you that we are planning to set up a plant for TDI (Toluene Di-isocyanate), the basic raw material for the manufacture of polyurethanes. An application for the

necessary Letter of Intent was submitted to the Government in March 1970 and we expect that your Company will receive it in the near future. Polyurethanes have a very broad use, the most important being Moltopren flexible foam with its numerous applications, for example, as mattresses, seats, cushioning material, lining for clothes and packaging material. Polyurethanes are used in the form of rigid foam for insulation in refrigerators, deep freezers, buildings and wagons. Semi-rigid foam finds application in the automobile industry as crash pads, arm rests, sun visors etc. Polyurethanes are also used as coatings and may indeed be used for several other purposes which may be developed in this country later on. Considering the wide scope, the importance of this project to the Indian economy seems obvious.

The **Pesticides Division** made good progress towards an increased turnover. I am pleased to say that in addition to "Ethyl Parathion", Methyl Parathion" and "Metasystox", we started the basic production of "Fenitrothion". The extended range of "Bayer Quality Pesticides" is showing its effect already on the sales during the first three months of 1971.

Our business in Household Pesticides is making steady progress. You are aware that they are highly effective insecticides originating from Bayer-research and in a sense, unique.

Our collaboration on scientific and technical matters with the scientists of Bayer Leverkusen and their world-wide organisation will be further intensified with the view of promoting better pesticides. We shall increase further our extension services and training efforts to acquaint farmers with correct and most economical pesticides—one of the most important inputs for boosting crop yields and the economic situation of farmers.

The performance of the **Pharmaceutical Division** may be considered to be satisfactory. As you are aware, there was some uncertainty in the business after the Drugs Price Control Order was introduced but this did not seriously affect your Company.

The plant for the basic manufacture of "Resochin" (Chloroquine Phosphate), the world-famous anti-malarial drug, has been working in full steam. We made substantial supplies to the Government, mainly for The National Malaria Eradication Programme and also to co-formulators. The basic production of a large number of other drugs was also increased at our multi-purpose plant, leading to considerable saving in foreign exchange.

With the co-operation of Bayer Leverkusen, we exported "Resochin", "Bayer's Tonic", "Detigon Linctus", "Mitigal", "Resotren Comp.", etc to Turkey, Thailand, Indonesia, Malaysia, Singapore and Ceylon.

I am pleased to say that we had full co-operation from all employees of your Company which has greatly contributed to our success in 1970. I am sure that such cordial relationship will continue to be maintained in future.

Thank you.

Notices

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England with liability of its members limited)

DIVIDEND NO. 45

NOTICE IS HEREBY GIVEN THAT AT The Forty-seventh Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta-1, on Wednesday, the 21st July, 1971 at 11-30 a.m. the Directors will recommend payment of a Dividend (No. 45) for the year ended 31st December, 1970 of 11.11% (1111 Paise i.e. 20 Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital £2,571,188, amounting to £285,688 (last year 8.889% amounting to £228,550). Subject to confirmation of members, the dividend will be paid on or after the 16th August, 1971 to all members registered in the books of the Company at the close of business on the 10th May, 1971.

The Registers of Members will be closed from the 11th May, 1971 to the 29th May, 1971, both days inclusive.

The profit before Taxation for the year ended 31st December, 1970 after providing £296,747 for depreciation (£319,669 last year) and £20,974 for Development Rebate Reserve (£135,798 last year) was £1,718,357 (against £1,225,126 for previous year), out of which £861,111 has been provided for Taxation (against £530,556) leaving a net profit for the year of £857,246 (against £694,570). To this has been added, £38,204 (last year £41,919) being the Development Rebate Reserve written back in respect of prior year, making a balance available for distribution of £895,450 (against £736,489). Out of this balance, £34,397 (against £35,477) has been transferred to Reserve for Capital Development, £ Nil (against £11,671) to Capital Reserve and the balance £861,053 (against £689,341) to General Reserve. The Directors will recommend the payment of the dividend referred to above out of General Reserve.

By Order of the Board,

S. N. SINGHANIA,
Secretary.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA-1.

Dated the 21st April, 1971.

DHUNSERI TEA AND INDUSTRIES LIMITED

THE DIRECTORS OF THE COMPANY have decided to recommend to the forthcoming Annual General Meeting to be held on 27th May, 1971 the following dividends for the year ended 31st December, 1970 subject to deduction of tax:—

- 10% on Cumulative Preference Shares.
- 12½% on Equity Shares.

By Order of the Board,

S. L. DHANUKA,
Mg. Director.

CALCUTTA: 19th April, 1971.

EXPORT ANGLE

By Stevedore

Downtrend in leather

FOREIGN exchange earnings from leather, leather goods and allied products during 1970-71 are expected to show a fall from the figure for the preceding year. This is the assessment of the Leather Export Promotion Council. In 1969-70 the total leather exports were of the order of Rs 98 crores of which Rs 53 crores were accounted for by vegetable tanned leather. The exports of this leather are handled directly by the Council. Its efforts during 1970-71 have resulted in shipments of only Rs 45 crores, which means in this item alone there is a shortfall of Rs 8 crores. It remains to be seen whether exports of other goods such as chrome tanned hides and skins footwear, raw goat and kid skins finished leathers and pickled goat skins will make good at least part of this loss or they themselves will also show a decline.

According to Mr T. S. R. Subramanian, Secretary of the Council, one reason for the fall in the unit price of our leathers, which was as sharp as 25 per cent in some cases. This development was the result of uncertain monetary conditions in European countries, industrial recession in America resulting in a number of manufacturers going out of business and unsettled fashion trends. But the market now seems to have steadied and Mr Subramanian hopes that 1971-72 will prove a very good year. He expects that the recent announcement by the Government of India of airfreight subsidy for finished leather and leather goods would give a fillip to the export of these items. The freight subsidy would neutralise 50 per cent of the freight actually paid subject to certain f.o.b. ceilings.

Good record of Hoechst

HOECHST Pharmaceuticals Ltd has succeeded in reaching an export figure of Rs 65 lakhs during 1970-71. This represents about 10 per cent of the total production of the company which hopes that during the current financial year its exports will rise further to Rs 75 lakhs.

The main items which have found a market abroad are baraligan keton and tolbutamide which were bought by Hoechst units in Australia, Mexico, Brazil and Egypt. But the company is also developing certain pharmacopical preparations with an eye on exports. One of them was sulphadimidine tablets which were supplied to Malaysia against a tender. A repeat order from Malaysia was also secured. In last December Hoechst exported reverin, a broad spectrum antibiotic, to its associates in Cairo. The value of this order was Rs 11 lakhs. It is expected that with the support of the Government Egypt's entire requirement of reverin will be met by the Hoechst factory in Mulund. Actual exports by Hoechst accounted for 7.2 per cent of the total exports of the pharmaceutical industry. The target set by the industry for 1971-72 is Rs 10 crores, and Hoechst,

the third largest exporter of pharmaceuticals in this country, will contribute Rs 75 lakhs towards that goal.

Market for threads

COATS of India has done a good job in the export of sewing threads. During 1970-71 these exports totalled Rs 1.08 crores and were double that of the figure in 1969-70. As many as 41 countries are buying this product. Apart from the direct export of threads, Coats has supplied top quality threads to the textile industry to be used in the manufacture of ready-made garments for export.

Relays to West Germany

ELECTRONIC Research Private Ltd, which went into production only a year ago, has received an order for 7,500 relays from West Germany. Company sources have said that the samples which were sent

to Germany earlier were found to conform to international standards. It is expected that exports will commence in the next few weeks. Electronic Research has plans to diversify its production and negotiations have been almost completed with Siemens for technical collaboration for manufacture of cradle relays and sealed polarised relays. Already Electronic Research has supplied 12,000 polarised relays to the Indian Telephone Industries and this has resulted in a saving of Rs 14.5 lakhs in foreign exchange.

Rayon cord for Austria

CENTURY Rayon is reported to have bagged an order for rayon tyre cord from Austria. The contract is worth Rs 60 lakhs. A trial order for about Rs 9 lakhs was executed last year and the new contract is a follow-up to that.

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities, the items required and the closing dates of these tenders are as follows:

Argentina

SEGBA, Buenos Aires; Discharges; May 12, 1971.

Australia

Electricity Commission of NSW, Sydney; Capacitor voltage transformer; May 31, 1971.

Brazil

Central Eletrica De Furnas S.A. Rio de Janeiro; Microwave equipment; not specified.

Burma

Electricity Supply Board, Ahlone, Rangoon; Transformers; June 10, 1971.

State Timber Board, Rangoon; Solid tungsten carbide cutter, tyres and tubes, revolving chains, high pressure water pipe, brass slum, measuring tape, saws, chains, rectifier, bulldog grips for wire rope; May 10, 1971.

Industrial Development Corporation, Rangoon; Asbestos cement sheet manufacturing plant; June 30, 1971.

Electricity Supply Board, Rangoon; Brushes; June 10, 1971.

Industrial Development Corporation, Rangoon; Supply of complete modern asbestos cement sheet manufacturing plant on turn-key basis; June 30, 1971.

Ceylon

Ceylon State Hardware Corporation, Colombo; Steel items; May 10, 1971.

Iran

The Iranian State Railway, Teheran; Water filtration plant; June 8, 1971.

Kenya

East African Posts and Telecommunication Equipment, Nairobi; Distribution cable; June 15, 1971.

Malaysia

Binnie and Partners, Kuala Lumpur; Civil engineering works; June 30, 1971.

New Zealand

New Zealand Electricity Department, Wellington; Circuit breakers; June 30, 1971.

Papua and New Guinea

Supply and Tenders Board, Papua; Water raising equipment; May 25, 1971.

Singapore

Public Works Department, Singapore; Ula Pandan sewage construction; June 4, 1971.

Sudan

Sudan Tea Company, Khartoum; Tea; May 13, 1971.

The Sudan Gezira Board, Barkat; Rails and accessories and automatic sprinklers; May 17, 1971.

Trinidad and Tobago

Trinidad and Tobago Electricity Commission, Trinidad; Hardware and cable; May 28, 1971.

Tunisia

The Ministry of Public Works and Housing, Tunis; Reconstruction and modernisation of structures; Advance information for prequalification.

Uruguay

The Uruguaya Electricity and Telephone Authority, Montevideo; Transformers; June 10, 1971; Electrical equipment; June 11, 1971.

UAR

Misr Beida Dyers, Alexandria; Machinery for artificial fur and nappies; June 15, 1971.

Exporters may obtain the tender documents from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the *Indian Export Service Bulletin*, dated April 24, 1971, issued by the Directorate of Commercial Publicity in the Ministry of Foreign Trade.

SUGAR-
BUT WHO
MAKES
PROFITS?**

Category	Percentage
COST OF CANE (including Purchase Tax/Cess)	68.7%
MFG. EXPENSES (including incidentals ignored by Tariff Commission)	23.8%
RETURN ON CAPITAL	7.5%

Present Ex-Factory Cost: Rs. 139.31 per bag
Realisation: Rs. 128.00 per bag
LOSS: Rs. 11.31 per bag

The industry finances cane-growers through loans and also gives bank guarantees, timely quality inputs, free technical advice of experts, selected seed-setts, transport facilities, road maintenance, etc.

For continued cordiality of relationship, and because most factories are in undeveloped areas, the industry extends every conceivable amenity to its workers — housing, sanitation, canteens, fair price shops, dispensaries, hospitals, special medical camps, child welfare centres, recreation, children's education — all for the workers' welfare.

Though seasonal and agro-based, the industry has always risen to the goals of socio-economic justice, through maximum production and employment. Yet the industry is suffering. Will the Government realise and redress our plight? So far, our appeals have not been heeded.

BITTER FACTS ABOUT SUGAR

In Southern States, we are now losing over Rs. 11 per bag of Sugar on an average. Here are some reasons:

- Recovery of Sugar from cane is low in the South; in Tamil Nadu as low as 7.9%, or 79 kg. of Sugar per tonne of cane — against 9.4%, or 94 kg. of Sugar per tonne of cane, assumed by Government for fixing cane prices. Controlled Sugar price is also based on this very assumption.

- The Government's release orders are not equitable. Maharashtra, for example, produces 10 lakh tonnes of Sugar a year — i.e. more than all Southern States put together — but today holds no stocks of last year's production, and has sold over 1,00,000 tonnes of this year's production. On the other hand, we still hold roughly 15% of last year's production and also the entire current year's production (over 6 lakh tonnes valued at Rs. 80 crores). We suffer most in stock accumulation and unlifted allotments.

- Excise rates have skyrocketed — up to 1,400% since the first imposition.

- Last year alone, the Excise rise was 63% on free-market Sugar, and now 'free' Sugar is selling at less than the controlled price.

- In 1965, the Sugar Enquiry Commission recommended that a buffer stock be built up. In 1969, the Tariff Commission endorsed this. The Government has not acted on this. Result? We pay crores of rupees in interest & service charges on stocks. That is why we are in unprecedented arrears to cane-growers.

- The Government has not fully heeded Tariff Commission recommendations in fixing Sugar price. It has also ignored the Reserve Bank of India evaluation in 1967, showing poorest earnings of all by Sugar Industry. The condition is worse today. The implementation of the Second Sugar Wage Board Award from 1969 will further increase our costs.

The Southern Sugar Mills take 9 lakh tonnes of Sugar annually — about 22% of the country's production — worth about Rs. 120 crores.

In this, the Central Government gets about Rs. 36 crores in Excise levies; and the State Governments get about Rs. 8 crores in Cane Cess, Purchase Tax, etc. And the Sugar Mills? Last year alone they LOST over Rs. 6 crores!

The cost of Sugar-making in the country varies from Rs. 114 to Rs. 156 per bag. The cost of sugarcane (nearly 70% of the total) is equalised, such disparities will not arise.

INDUSTRY OF, BY & FOR THE PEOPLE

The Southern Sugar Industry is not in the hands of a few capitalists. It is actually owned by tens of thousands of farmers and rural investors of middle and lower classes.

Who depends on it? About 3,00,000 sugarcane growers — to whom the industry pays Rs. 80 crores annually. And over 45,000 workers — whose annual wage bill is over Rs. 9 crores.

RESULT?

We are facing a crisis. If this continues, the Mills may have to close down or curtail crushing.

WHO WILL SUFFER?

Nearly 3 lakh cane growers. And also over 45,000 workers.

WHAT'S THE REMEDY?

In the interests of national economy, cane growers, workers, and the public, the GOVERNMENT SHOULD

- BUILD UP BUFFER STOCKS
- REMOVE DISCRIMINATORY EXCISE LEVY ON 'FREE' SUGAR
- REDUCE CANE CESS/PURCHASE TAX
- LINK MINIMUM CANE PRICES WITH RECOVERY OF 8.5% AND BELOW, WITH SUITABLE PREMIUM FOR HIGHER RECOVERY

Will the Government act — before it's too late?

**THE SOUTH INDIAN
SUGAR MILLS
ASSOCIATION, Madras-1**

INDIAN ALUMINIUM COMPANY LTD.

Chairman, Mr H. V. R. Iengar's Speech

THE following is the speech delivered by the Chairman, Mr H. V. R. Iengar, at the Annual General Meeting held on April 28, 1971:

I welcome you to the Thirty-third Annual General Meeting of the Company.

I am sorry to say that for reasons of health I am unable to be present at this annual shareholders' meeting which I had the pleasure of attending every year since I became Chairman of this Company.

A highlight of our year in 1970 was the formal opening of the Belgaum plant on November 7 by the President of India, Shri V. V. Giri was good enough to refer in his address to Indal as a progressive employer with an enlightened approach to labour problems. His kind remarks were much appreciated and Indal will endeavour to continue to live up to them.

Let me concentrate my remarks on our Company's performance over the past year and dwell a little on some of the problems which are outstanding.

Sales increased substantially in line with increased production. Our new alumina and smelter facilities reached planned capacity levels in a commendably short space of time. All of our older plants also performed well, and after allowing for the effects of the strike at Hirakud, record levels of output were attained in 1970. This is particularly gratifying as plants become subject to wear and tear as they grow older and need more intensive maintenance and attention.

Whilst our sales volume and sales revenues increased very substantially last year income showed hardly any change. Whilst this was largely due to the absorption of start-up expenses at the new smelter at Belgaum the Company's costs continued to be affected by price increases in its raw material and other inputs. It is disquieting that in the face of these continued additions to prices of raw materials our own selling prices are frozen by Government at levels which are, on average, Rs 250 per tonne lower than the prices we were receiving at the end of 1966. Such a situation was difficult to envisage when the Belgaum project was launched.

Our forecast of metal demand indicates a continuing shortfall in indigenous supply for the next few years, in spite of the rapid rate of expansion of the industry. During this period metal will have to continue to be imported and it is interesting to note that during the past month it has been reported that imported metal was being offered for sale about Rs 1,600 per tonne higher than Indal's price. It seems that this is additional proof of the need for urgent further expansion of domestic production and evi-

dence also that there is scope to encourage our industry in India without being unfair to customers.

It should be observed that Indal's record over the past decade is one of continuous expansion and our 1970 production and sales show a fourfold increase over 1961. About fifty crores of capital expenditure has been made over these ten years, and we are providing full-time employment for almost two thousand additional people.

So far as Indal is concerned our intention is to endeavour to continue to expand although it should be appreciated that major expansion projects take three or four years under construction and that to forecast the viability of a proposed expansion is difficult over a lengthy period when one sees rising costs and frozen prices. We hope that Government will provide some measure of relief upon hearing the findings of the Working Group appointed to study our industry.

Our Talaja project is going ahead steadily although it has been subject to some delays caused by the steel shortage and procedural difficulties in obtaining import licences. It is hoped that the sheet mill will be in operation by the end of the year, although all the proposed facilities will not be completed until next year. The sheet mill will be a most important addition to our facilities and will materially contribute to developing new uses for aluminium. As shareholders will know, aluminium producers are restricted in the amount of semi-fabricating capacity they can install, limiting such capacity to about half of smelter production. Whilst the purpose of this policy is to ensure that adequate supplies of ingot are available for conductors for the electrification programme, it does leave producers in an awkward position if demand from the electrical sector falls off for any reason, the demand for products in ingot form, outside the cable industry, being relatively small.

In the long run the quantity of metal required by the conductor industry will fall substantially below half of smelter production. If domestic markets are to be found for the additional volume of metal that will be available when demand by the cable industry declines, semi-fabricating facilities must exist to convert a large part of this additional ingot into usable forms. Since it takes about three years to plan and install such facilities it will be important that any change in demand by the conductor industry be seen sufficiently far in advance to permit the timely installation of additional semi-fabricating facilities.

We believe this transition in the market would be more easily catered for if

producers were allowed to install facilities now, for a rather larger percentage of their smelter production.

Our new mill will bring our semi-fabricating facilities into line with the increased smelter production and provide our customers with sheet products as good as any available in the world today.

The addition of the fourth potroom of 10,000 tonnes per annum capacity should be completed this year at Belgaum and it is anticipated metal production from this will start by January 1 next.

Application has been made to the Controller of Capital Issues for permission to make a bonus issue in the ratio of one new share for each two shares held. This is intended to bring our issued capital more in line with the true picture of the Company's assets.

Sales for the first quarter of the current year continue to absorb all metal produced and our plants continue to operate at a high level of efficiency. This level is proving quite difficult to maintain as shortages are apparent and delays occur in the supply of vital raw materials such as pitch, cryolite and fluoride. However, with a full year's production to be anticipated from both Belgaum and Hirakud, we look forward to an increase in production in 1971, of twenty-five per cent over 1970. We have current collective labour agreements at all our locations covering all of 1971 and hope for a satisfactory year so far as industrial relations are concerned.

In February, Dr C. L. Katial resigned from our Board after eleven years of distinguished service to the Company as a Director, our good wishes go with him in his retirement.

I regret to say that Mr Dana T. Bartholomew who retires from the Board in accordance with Article 117 of the Company's Articles of Association has informed us that he does not wish to seek re-election. Mr Bartholomew has been a member of Indal's Board since April 27, 1966 and has given us valuable help and guidance particularly in financial matters. He was a staunch supporter of Indal and we will miss very much his presence on our Board.

I am glad to inform you that Mr John H. Hale who has succeeded Mr Dana T. Bartholomew as Executive Vice-President, Finance and Treasurer of Alcan Aluminium Limited, has expressed his willingness to serve on our Board. A resolution concerning his appointment will be moved later.

Meeting construction deadlines and improving on existing efficiencies in our plants demands hard and constant work from our employees. Great credit should be given to all our management staff and to our work people for the keenness and enthusiasm shown by them. Growth of the Company creates new challenges and it is good to record the excellent attitude towards change and a willing response from all our people.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

CENSUS 1971

Population densities getting even

By Commerce Research Bureau

WHILE the release of the full results of the 1971 census operations through about 2,000 publications may go on for the next ten years or even more, the first summary results have been published in Paper 1 of the Census of India 1971 under the title *Provisional Population Totals*. One must admire the sense of urgency displayed by the census organisation. The enumeration all over the country was over on April 3. The summary results from all the States and the Union Territories were received in the Census Commissioner's Office at New Delhi by April 8. The printed document, with a number of tables and well-prepared maps, was officially released on April 12. These results will be briefly discussed in the following paragraphs. The basic data from Paper 1 are presented at the end in three statements.

We may start with the most important single figure, namely, the total population. The provisional total has yielded a figure of 547 million, as against 439 million recorded in 1961. Thus, in a single decade our population has gone up by 108 million or 24.6 per cent—a staggering rise by any standard. This addition is more than the present total population of Japan. It was truly a decade of an unprecedented population explosion.

Yet, paradoxically enough, the actual results of the census have come as a bit of a happy surprise to the census organisation and the demographers. For, only recently an official committee of experts estimated that the population of the country on April 1, 1971 would be 561 million. The actual figure has turned out to be 14

million less. In Paper 1, the Census Commissioner Mr A. Chandra Sekhar has put forward two likely explanations for this happy result. These are:

(1) "It is...likely that the infant mortality rate assumed (by the committee) was an under-estimate which might have led to an overexpectation of fall in mortality for the period 1961-70."

(2) "Besides, it is possible that the impact of family planning has been imperceptibly more than what could be assumed by the expert committee."

This downward correction of 14 million in the official estimate of India's population is, however, a poor consolation. For, a far more important revelation of the census is that the alarming acceleration in the growth of India's population which was in evidence in the pre-1961 years, is now seen to have continued in the latest decade also.

It will be noted that barring a major dip in the decade 1911-1921 (due to pestilence) and a marginal dip in the decade 1941-1951 (due to the holocaust that accompanied partition), there has been a

Table 1: Decennial growth rate of India's population: 1901 to 1971

Year	Population in million	Variation in million	Percentage variation
1901	238.3		
1911	252.0	13.7	+ 5.73
1921	251.2	-0.8	- 0.30
1931	278.9	27.7	+ 11.00
1941	318.5	39.6	+ 14.00
1951	361.0	42.5	+ 13.31
1961	439.1	78.1	+ 21.64
1971	547.0	107.9	+ 24.57

steady acceleration in the growth rate of population throughout the period covered by these data. Concentrating on the recent decades, the decennial growth was 13 per cent during the decade ended 1951. The growth rate rose sharply to 22 per cent in the next decade. As the census data have now revealed, there was an unprecedented increase of 25 per cent in the latest decade (1961-1971). Putting it in different terms, the average annual rate of increase of population during the last three decades has been 1.3 per cent, 2 per cent and 2.2 per cent, respectively.

In the context of this steady acceleration, an important question obviously arises in our mind. What could be the likely growth rate of population in the coming decade? Would the high rate of 25 per cent continue or even rise further? Further, turning to the decade 1961-71, what could have been happening to the population growth rate year by year? Was the growth rate increasing throughout the decade? Or, was it that it rose in the earlier years and then started falling in the later years? One can be sure that, in the due course, official and non-official demographers would be providing interesting answers to these crucial questions.

For the time being, we may note that during the last 50 years, India's population has more than doubled from 250 million to 550 million. Even after making a reasonable allowance for some slow-down in the growth rate, it appears that our population may again almost double to touch the 1,000 million mark by about 2000 A.D., which is not very far. The 1971 census, therefore, has once again reminded us about the supreme necessity of further intensifying our family planning programme.

As can be expected, the regional pattern of demographic growth rate differs from State to State (Statement 1). Behind the national average of 25 per cent increase during the latest decade lies a wide diversity. The corresponding figure is as high as 40 per cent for Nagaland and 34 per cent for Assam on the one hand and 20 per cent for Uttar Pradesh and 21 per cent for Andhra Pradesh on the other hand. The census document gives some interesting comments on the regional pattern of growth rate of population. Its major propositions are as under:

(1) The hollow basin of thinly populated districts of Orissa, Madhya Pradesh, Rajasthan and Gujarat, is getting rapidly filled. (2) At the same time, the densely populated valley of the Gangetic plain, the eastern coastal region and the southern peninsula are showing distinctly poor growth rates. (3) The Gangetic plain districts seem to show a sign of satura-

tion. Surplus population of this region is getting syphoned to the sparsely populated regions of the country. (4) As the document rightly notes, "perhaps this is an indication of healthy internal migrational trends and an equitable distribution of population."

The hypothesis that high density areas have low growth rates and low density areas have high growth rates is broadly corroborated by an elementary analysis presented in the following matrix.

Apparently, the exceptions to this hypothesis are: (i) Haryana, Kerala, W. Bengal, which have high densities as well as high growth rates and (ii) Andhra Pradesh, Himachal Pradesh and Mysore, which have low densities and low growth rates. As for West Bengal, the high growth rate is largely due to more or less steady inflow of refugees from East Bengal. Through a closer analysis, other seeming exceptions can also be explained.

Needless to add, a deeper and more satisfactory analysis can be conducted only in terms of the district level data. While the document under review gives excellent maps depicting the district level data, it does not give the underlying statistics.

Literacy

As can be seen from statement II, the literacy rate for the country as a whole has been found to be 29 per cent. The corresponding figure in 1961 was 24 per cent. The progress during the entire decade thus works out to only 5 points or 22 per cent. Even after 24 years of independence, 71 per cent of the population is still illiterate. This highlights our grave failure in this field.

In this context, apart from the absolute level of the literacy rate, it is worthwhile concentrating attention on the rate of increase of literacy. The relevant data are presented in table 3.

There are regional variations in this respect also. If the increase in the literacy rate for the country as a whole is 22 per cent, the corresponding figure was substantially higher for Laccadive, Minicoy, Amindivi islands (87 per cent) on the one hand and as low as 7.4 per cent for Delhi and a setback in the literacy rate for Assam (-1.5 per cent). Generally the pace of progress of the Union Territories has been better than that of the States. Among the States which have fared well above average are: Jammu and Kashmir (66 per cent), Meghalaya (54 per cent), Nagaland (53 per cent),

Table 2: Relationship between the density in 1961 and population growth in the decade 1961-1971

		Density in 1961	
		Above the average	Below the average
Population growth in the decade 1961-71	Above the average	Haryana Kerala W. Bengal	Assam (includes Meghalaya) Gujarat Madhya Pradesh Maharashtra Nagaland Orissa Rajasthan Jammu and Kashmir
	Below the average	Bihar Punjab Tamil Nadu Uttar Pradesh	Andhra Pradesh Himachal Pradesh Mysore

Himachal Pradesh (43 per cent) and Haryana (34 per cent). Among the major States, the best performance is that of Maharashtra (31 per cent) and the poorest that of Bihar (9 per cent).

Beyond doubt, by far the most spectacular performance has been that of Kerala. Even in 1961, Kerala stood first among all the States with literacy rate of 41 per cent. In the subsequent decade, it took another big jump in the literacy rate and maintained its prime position among all the States with literacy rate of 60 per cent. This State provides a model for the whole country.

A black spot of India in this respect should be noted here—female literacy. While the literacy rate for the males is 39 per cent, it is only 18 per cent for females. For Bihar, the second largest State of India in terms of population, the female literacy rate is as low as 9 per cent. For Rajasthan it is still lower at 8 per cent.

Metropolitan cities

The document also gives some basic statistics for cities with population of one million and above. Unfortunately the data are not for cities but rather only for agglomerations, that is inclusive of several small townships around the major cities. So defined, there were eight cities of this size in 1961. In 1971 their number was nine. Poona urban agglomeration was the new addition: it recorded a population of 11 lakhs. At the other end, the Calcutta urban agglomeration maintained its prime position with a population of 70 lakhs. Greater Bombay, with 59 lakhs, Delhi urban agglomeration with 36 lakhs and Madras agglomeration, with 25 lakhs, ranked second, third and fourth in that

order. The combined population of these nine metropolitan cities adds upto 2.7 crores or 4.9 per cent of the total population of the country.

As usual the sex ratio in the metropolitan cities is very low. In the country as a whole, for every 1,000 males there were only 932 females—a reflection of the relative neglect of health of females. Against this national average, the corresponding figure for Calcutta urban agglomeration was 883.

Table 3: Pace of increase of literacy rate in different regions 1961-71

Rank	State/Union territory	Percentage increase
1	Laccadive, Minicoy and Amindivi Islands ..	86.7
2	Jammu and Kashmir ..	65.9
3	Dadra and Nagar Haveli ..	58.8
4	Meghalaya ..	53.8
5	Nagaland ..	52.6
6	Tripura ..	52.5
7	Himachal Pradesh ..	47.3
8	Goa, Daman and Diu ..	44.8
9	Haryana ..	33.9
10	NEFA ..	31.0
11	Maharashtra ..	31.0
12	Andaman and Nicobar Islands ..	29.3
13	Madhya Pradesh ..	28.6
14	Kerala ..	28.4
15	Tamil Nadu ..	25.4
16	Punjab ..	24.0
17	Mysore ..	23.9
18	Rajasthan ..	23.5
19	Uttar Pradesh ..	22.6
	India ..	22.1
20	Orissa ..	20.6
21	Chandigarh ..	19.9
22	Gujarat ..	17.2
23	Andhra Pradesh ..	15.9
24	Pondicherry ..	15.8
25	West Bengal ..	12.0
26	Bihar ..	8.5
27	Manipur ..	7.8
28	Delhi ..	7.4
29	Assam ..	-1.5

meration was as low as 686. The sex ratios for Greater Bombay and Delhi urban agglomeration were slightly higher at 721 and 796, respectively.

As can be expected, the literacy rates in the cosmopolitan cities were substantially higher than the national level. The literacy rates ranged from 51 per cent in Kanpur to 64 per cent in Greater Bombay. Bombay thus has the proud distinction of being the most educated metropolitan city of the country. (For census statistics see page 826.)

BALANCE SHEETS

EXPORTS CROSS CRORE-MARK

Philips India fares well

Philips India Ltd. (Chairman and Managing Director: Mr J. Lusink, Calcutta) has recorded a remarkable improvement in its working for the year ended December 31, 1970. The company's sales at Rs 37.7 crores (Rs 30.2 crores in 1969) represent a handsome rise of 24.8 per cent. The gross profit rose to Rs 7.8 crores from Rs 6.2 crores. The net profit, after depreciation and taxation, amounted to Rs 2.5 crores (Rs 1.9 crores). The ordinary dividend was 20 per cent (23 per cent) and it is payable on the increased capital. During the year under review, the subscribed capital of the company was raised from Rs 3.64 crores to Rs 5.46 crores by issue of bonus shares of Rs 1.82 crores in the ratio of one share for two shares held.

The company's gross profit margin works out to 20.8 per cent against 20.5 per cent. The ratio of net profit to net worth comes to 24.8 per cent (21.9 per cent).

During the year under review, production of incandescent and fluorescent lamps as well as lamp components, which are also supplied to other lamp manufacturers was maintained at full capacity at the company's factory at Kalwa, near Bombay. The additional plant for the expansion of glass tube making capacity was commissioned during the year. Production of electrodes was below capacity because of the extreme shortage of local mild steel wire and the non-availability of stainless steel. The company's factory at Loni, Poona, maintained its production of electronic components at full capacity.

In the year under review, the company's factories at Calcutta and Poona continued to produce radio receivers at full capacity in spite of great difficulties in procuring raw materials and some component parts of the requisite quality and quantity. A new range of radio sets was launched incorporating the latest designs and techniques. A new factory has been set up at Bhosari Industrial Estate, Pimpri, Poona, where production started towards the close of 1970.

Sales of all product lines increased in 1970 with radio, light products and components for other lamp manufacturers contributing considerably to the higher sales. Telecommunication equipment and welding electrodes also showed a significant growth in sales. The company has extended activities in the field of sophisticated professional and scientific equipment and a special programme of customer education and sales promotion was undertaken during the year.

The company's exports crossed the Rs 1-crore mark during the year and were 40 per cent more than in the previous year. The exports included radios, lamps, electro-acoustic equipment, electronic measuring equipment and electronic components to Europe, the Far East, and West Asia.

Deliveries of fully transistorised portable transceivers from the telecommunication factory at Calcutta against firm orders from the Government started in the second half of the year. This order is ex-

pected to be completed by the end of 1972. On the basis of a letter of intent received by the company, the preparations for the production of taperecorders were taken up. Due to certain conditions imposed by the Government, the production of taperecorders which was originally expected to start in Pimpri in 1972 will be delayed. The company has applied for the production of television sets.

Indian Aluminium

THE performance of Indian Aluminium Co Ltd (Chairman: Mr H. V. R. Iengar, Calcutta) for the year ended December 31, 1970 was highly encouraging. The company's sales spurted to Rs 35.4 crores from Rs 26.4 crores in the previous year. The gross profit was substantially higher at Rs 8.2 crores (Rs 6.8 crores). The net profit, after depreciation, increased to Rs 5.3 crores (Rs 4.9 crores). The ordinary dividend has been maintained at 14 per cent.

The company's gross profit margin works out to 23.2 per cent against 25.7 per cent. The ratio of net profit to net worth comes to 16.7 per cent (15.4 per cent). The company proposes to issue ordinary bonus shares of Rs 6.01 crores in the ratio of one bonus share for two shares held by capitalising reserves. The issue is subject to the approval of the Government.

During the year under review, expenditure on new plant and equipment amounted to Rs 9 crores most of which related to the West Coast Project. The

smelter production increased to 61,665 tonnes from 41,561 tonnes in 1969. This 48 per cent rise is accounted for by the additional output from the Belgaum smelter where the production was 27,210 tonnes (1,128 tonnes). Production at the Hirakud smelter was lower at 16,198 tonnes (22,576 tonnes) due to a three-month strike. Operations at this smelter have been satisfactory since the end of the strike on April 27, 1970. The Alupuram smelter produced 18,257 tonnes which was only slightly above the previous year's output.

The Muri alumina plant operated at capacity and bauxite mining at Lohardaga kept pace with Muri's requirements. At Belgaum, production of hydrate started in March 1970 and of alumina calcination in August. The sheet rolling mill at Belur, the extrusion press at Alupuram and the foil plant at Kalwa, reached record production levels in the year. Powder and paste production at Kalwa was slightly lower than in the previous year. The Properzi mill at Alupuram achieved high levels of productivity and production was higher than in 1969.

During the year, sales volume was 62,595 tonnes (42,997 tonnes) and represented a rise of 45 per cent over 1969. Most of the additional tonnage was sold as ingot and sales of semi-fabricated products amounted to 22,737 tonnes (20,378 tonnes). As much as 600 tonnes of semi-fabricated products valued at Rs 37 lakhs were exported.

At Belgaum, the third potroom and the alumina plant were commissioned during the year. All the major units of the

smelter and alumina plant are now in operation. The production at the new sheet mill at Talaja is expected to commence by the close of this year. The company has received an industrial licence to expand the Belgaum smelter by the addition of a fourth potroom, which will add about

10,000 tonnes per annum to the capacity already installed. This is expected to be completed by the end of this year. It is estimated to cost about Rs 4 crores. □

Bayer (India)

BAYER (India) Ltd (Chairman: Mr B. M. Ghia, Bombay) has improved its sales for the year ended December 31, 1970 to Rs 7.4 crores from Rs 5.8 crores in the previous year. The gross profit rose to Rs 1.6 crores from Rs 1 crore. The net profit, after depreciation, was Rs 106 lakhs (Rs 52 lakhs). After adjustment of this profit against the company's accumulated losses of Rs 123.02 lakhs (as on December 31, 1969) a debit balance of Rs 17 lakhs has been carried forward. Against this the company holds reserves and surplus amounting to Rs 125.5 lakhs.

The company's gross profit margin works out to 21.6 per cent against 17.6 per

cent. The ratio of net profit to net worth comes to 25.2 per cent (12.3 per cent).

There was a rise in sales of all the three divisions, i.e. rubber chemicals, pesti-

cides and pharmaceuticals. As in the previous year the company was able to meet all its requirements for capital expenditure, increased working capital and repayment of long-term loans almost entirely from internal sources. The cost of production has shown a downward trend and this was possible because of the increased sales during the year, resulting in satisfactory utilisation of production capacities of all the plants.

The company has already received a letter of intent from the Government of India for effecting considerable expansion in the manufacture of rubber chemicals and to manufacture intermediates thereof. It is proposed to set up a plant for the manufacture of TDI (Toluene-Di-isocyanate) an important raw material for the manufacture of polyurethane foams. The necessary application for the manufacturing licence was submitted to the Government of India last year. A letter of intent is likely to be granted to the company in the near future. □

Kamani Engineering

KAMANI Engineering Corporation Ltd (Chairman: Mr P. R. Kamani, Bombay) has recorded an excellent performance for the year ended September 30, 1970. Sales at Rs 14.2 crores were nearly twice as much as Rs 7.5 crores in the previous year. The gross profit was Rs 41 lakhs against a loss of Rs 10 lakhs. The profit, after depreciation, amounted to Rs 26 lakhs (loss of Rs 24 lakhs). The ordinary dividend has been stepped up to 9 per cent from 6 per cent. During the year under review the production of towers and other structures was maintained almost at the same level as in the previous year. This was an achievement in the background of chronic shortage of steel and bolts and nuts.

The company's export turnover amounted to Rs 8.18 crores (Rs 1.81 crores). It also completed its first US order of the value of Rs 1 crore. The same purchasing authorities have awarded an additional order of 500 kv towers to the tune of Rs 15.74 lakhs. The turn-key job of Rs 6 crores in the Sudan is expected to be completed in the current year. The company

has secured two turn-key jobs, one in West Asia and another in South-East Asia.

The company has undertaken construction of a hydro-power station at Ukai. This is a turn-key job involving deep rock excavation, heavy civil engineering work, mechanical erection and commissioning of equipment, including turbines and generators. The railway electrification work on the Baroda-Ahmedabad section is in its final phase.

The company is developing a series of modern production lines to meet the grow-

ing demand. These are in the areas of development of structural for aviation needs, special railway electrification needs, as also to meet the potential in the expansion of tele-communication network in the country. It is also finding ways and means to fully utilise its capacity by taking up sundry fabrication and galvanising activities.

The company is setting up a steel rolling mill in Jaipur of a capacity of 20,000 tonnes per annum. This project is expected to go on stream in the current year. Production of road rollers during the year under review was 59 units (22 units). The company is geared up to use the latest quantitative techniques relating to planning and control including PERT, CPM and computer applications. The use of these techniques has been made in the planning and control of major turn-key projects as also in day to day working. This has helped gradually in the better integrating of the activities of the company as a whole as also for the planning in advance the removal of bottlenecks. □

Bombay Dyeing

WITH sales for the year ended December 31, 1970 higher at Rs 26.6 crores against Rs 22.1 crores in the previous year, the gross profit of the Bombay Dyeing and manufacturing Co Ltd (Chairman: Mr Neville N. Wadia, Bombay) rose to Rs 1.9 crores from Rs 1.6 crores. The net profit, after depreciation and taxation, amounted to Rs 52 lakhs (Rs 43 lakhs). The dividend was stepped up by 1 per cent to 13 per cent.

The company's gross profit margin works out to 7.3 per cent against 7.2 per

petition from overseas countries adversely affected the company's exports. There was some improvement in exports to West Europe and to Australia and New Zealand, which had been the company's most important market in the past. A steep decline occurred in exports to the UK due to company's inability to quote competitive prices in view of increased manufacturing costs.

In the year under review Rs 39,777 were spent on the construction and extension to buildings of the company's three mills. New machinery of the value of Rs 45.67 lakhs was installed in the mills of which Rs 16.52 lakhs will be payable in deferred instalments over five years under the Industrial Development Banks' Scheme for financing the purchase of local machinery.

The process of converting the cards to metallic wire at the spring mills and textile mills was continued throughout the year. New high-speed frames to renovate the machinery at textile mills were installed. Some ring frames have also been converted to doublers in view of the rise in demand for folded yarns. A yarn singeing machine, a double winder, a cylinder sizing machine and two sectional warpers have been installed to cope with the growing requirements of superfine and synthetic fabrics. Two new high temperature high pressure beam dyeing machines, a curing machine and padding mangle have been installed for more uniform and even dyeing of terene/cotton blended fabrics.

Binny

Sales of Binny Ltd, Madras, for the year ended December 31, 1970 amounted to Rs 40.51 crores. After providing Rs 1.23 crores for depreciation the company has suffered a net operating loss of Rs 1.11 crores. An amount of Rs 31.05 lakhs was set aside for the development rebate reserve. Preference dividend absorbed Rs 2.56 lakhs. After adjusting a surplus of Rs 2,290 brought in from the previous year and Rs 2.56 lakhs transferred from the general reserve, a loss of Rs 1.42 crores was carried to the balance sheet. Comparative figures for the previous year have not been furnished in the balance sheet since separate profit and loss account was prepared for 1969 for each of the amalgamating companies in accordance with the scheme of amalgamation. Total exports for the two mill units at Madras and Bangalore for the year under review were Rs 2.80 crores (Rs 2.61 crores).

Production in Madras and Bangalore mills was higher than in the previous year but this was due to additional loom shifts being worked in 1970. Major organisational changes were made and in particular mar-

keting for the two mill units was centralised in Madras by the end of the year. Centralisation of procurement of materials which was started in 1969 was completed in 1970. During the year under review, 176 BAZL and BAZ looms were installed in the Madras mills and 184 BAZL and BAZ looms in the Bangalore mills, making a total of 681 looms in Madras and 320 looms in Bangalore. New carding machinery for processing 1.5 denier polyester fibre and other preparatory textile and dyehouse machinery for the manufacture and processing of wide width cloth were installed in the Madras and Bangalore mills.

In the garment factory, production in the shirt unit was maintained at 1,500 shirts per day. A separate pyjama unit with capacity to produce 1,500 pyjama suits per day was set up in the factory during the year to handle export orders for pyjamas. This unit completed an export order of 1.2 lakh pyjama suits during the year. The factory's total sales increased from Rs 100.87 lakhs in 1969 to Rs 111.57 lakhs in 1970 and exports increased from Rs 12.28 lakhs to Rs 22.59 lakhs.

The engineering and agencies depart-

ment showed a 50 per cent increase in the turnover over the previous year. Regarding engineering division, the performance of the Madras Works in 1970 was considerably better than in the previous year in spite of the fall in turnover from Rs 1.91 crores to Rs 1.22 crores. Orders worth Rs 4.39 crores (Rs 1.72 crores) were received. The installation of the electric furnace was completed and it was commissioned in February 1971. The first locally manufactured Binny Satake rice mill has been installed and is now operating well in Uttar Pradesh.

Trichinopoly Mills

Total sales of the Trichinopoly Mills Ltd, Tiruchirappalli, for the year ended December 31, 1970, have increased to Rs 125.02 lakhs from Rs 91.06 lakhs in the previous year. The net profit, after providing Rs 2.59 lakhs (Rs 2.50 lakhs) for depreciation and Rs 2.82 lakhs (nil) for taxation, amounted to Rs 7 lakhs (Rs 4.83 lakhs). The dividend has been stepped up to 15 per cent from 12½ per cent. The development rebate reserve claimed Rs 2.52 lakhs (Rs 2.12 lakhs) and the general reserve Rs 2.35 lakhs (nil).

Telco

The output of Tata vehicles during the year ended March 31, 1971 has increased to 25,061 units from 20,306 units in the previous year. This is a rise of 23 per cent. The low output in 1969-70 was due to the 48 days' strike towards the close of 1969.

Standard Coal

The Standard Coal Co Ltd, Calcutta, has suffered a loss of Rs 1.31 lakhs for the year ended December 31, 1970 against a loss of Rs 85,260 in the previous year. This was after providing Rs 64,916 (Rs 61,535) for taxation. The dividend has been maintained at 10 per cent. In coal handling business, the company has earned a commission of Rs 71,627 (Rs 74,518). The company's portfolio is representative of investments which are quoted at the Calcutta Stock Exchange with the exception of certain shares costing Rs 1.5 lakhs. The aggregate of the market value of quoted investments and the value of unquoted investments as on December 31, 1970 amounted to Rs 18.14 lakhs.

Preliminaries

Tata Chemicals

Sales of Tata Chemicals Ltd, Bombay, for the nine months ended March 31, 1971, were Rs 859.72 lakhs as against Rs 851.51 lakhs for the corresponding period in the previous year. Among the company's major products, the output of soda ash during the nine months was 1,55,304 tonnes (1,53,393 tonnes).

Gaekwar Mills

Sales of the Gaekwar Mills Ltd, Bombay, for the year ended December 31, 1970, increased to Rs 3.72 crores from Rs 3.39 crores in the previous year. The gross profit was Rs 25.71 lakhs (Rs 13.40 lakhs). The ordinary dividend has been stepped up to 16 per cent from 12 per cent.

EQUITIES

Lack of fresh support

BOMBAY, April 28

AFTER a modest rally during mid-week on technical factors, equities again sagged owing to lack of fresh buying interest. The deteriorating political relations between India and Pakistan induced caution among operators, who preferred to mark time pending a clearer picture of the economic and political situation.

Prices as a result fluctuated narrowly, and though select scrips attracted enquiry, the overall sentiment was subdued. Turnover was also restricted.

Although corporate news was good, it failed to cheer up the sentiment. However, it prevented any serious damage to prices.

The easy tendency was also attributable to the pending Union Budget to be presented in late May. Market circles feel that the budget would be both saving- and investment-oriented and that the Finance Minister will not impose a harsh dose of taxation.

However, as corporate profits, by and large, have been better than they were in the past year, a section of the market is of the view that the Finance Minister would cast his net of taxation wider. But higher profits really do not mean much, as the margins of many companies have been squeezed by the steadily rising operational costs.

The decline in the call rate and the return flow of funds from issues like Garware Nylons in which large sums were locked up, induced selective support to equities.

Corporate news was generally encouraging. Dharamsi Morarji maintained the gross dividend at Rs 10 for 1970 on the increased capital. Dalmia Cement maintained the dividend at 12.5 per cent despite lower profit. S.I. Viscose doubled the dividend to 12 per cent against six per cent last year owing to excellent working. Sandvik Asia reported satisfactory results for the nine months to December 1970, with the gross dividend maintained at Rs 12 and a 1 for 5 bonus share issue. Finlay group mills stepped up the equity dividend by one rupee each of all three mills. Polson Ltd pruned the dividend from Rs 12.50 to Rs 10 for 1970 despite higher gross profit. Century Spinning reported excellent results, with the final dividend being stepped up by four points, and higher gross profit and sales.

Indian Iron returned for trading on the market after a lapse of eight months. Mukand Iron was in demand and improved. Orissa Cement rose to a new high on hopes of bonus issue. Polychem shot up on rumours of bonus issue but reacted. Firth Sterling rose on hopes of a maiden dividend of one rupee. Warner Hindustan spurred on the encouraging results. Ceat Tyres, Mahindra Uguine and Gujarat Fertilisers were also in demand. Gaekwar Mills moved up on higher dividend of Rs 16 against Rs 12 last year.

Spot cotton easier

BOMBAY, April 28

There was not much change in the pattern of trading in the cotton market during the past week. The buyers were few and far between and the prices continued to rule easy. The tight monetary conditions on the one hand, and heavy arrivals of foreign cotton on the other, restricted the spinners' buying to a very limited scale. Reports from upcountry also suggested that the spinners have been making sporadic purchases just to meet their immediate requirements.

The following has been the trend of prices of some of the leading varieties:

	For the week ending 28th April	For the week ending 21st April
Khandesh ..	2,150	2,200
Berar AK ..	2,100 2,250	2,100 2,300
Digvijay Dabhoi ..	2,800	2,881
Berar L. 147 ..	2,450-2,500	2,500 2,600
Manavdar Co. 2 ..	2,450	2,575
Kalyan 797 Soed ..	1,900	2,050

In the foreign section, sporadic business was noted in global varieties. Spinners and importers have been finding it difficult to clear the arrivals of foreign cotton owing to inadequate credit facilities extended by banks.

On the export front, small business was reported in Bengal Deshi cotton. Sales of this cotton registered for export as on April 24, were placed at 142,860 bales as against 188,479 bales in the same period

previous year. The quantity passed for shipment was placed at 96,788 bales as against 139,173 bales in the previous season. The quantity of miscellaneous cotton passed for shipment up to April 24 was 10,638 bales as against 14,757 bales a year ago.

ART SILK YARNS GAIN

BOMBAY, April 27

An improvement in the prices of yarns characterised trading in the yarns market during the past week. Art silk yarns, which were easy during the past fortnight, gained ground during the week following reduced arrivals and improved offtake. The persistent upcountry demand also imparted strength. Staple fibre yarns were quiet to steady. Cotton yarns were easier due to a fall in raw cotton prices.

In the art silk yarns section, 120D National Rayon put on seven paise to Rs 18.52. 150D Bright Century gathered a like amount to Rs 16.25. 120D picked up 12 paise to Rs 18.52. 150D National Rayon was fully maintained at last week's level of Rs 16.53 and so was 100D Bright South India at Rs 22.46. Staple fibre yarns (2 x 34 nF) spot Kiran was traded at last week's level of Rs 11.44.

JUTE GOODS DECLINE

CALCUTTA, April 27

The rising trend in prices of jute manufactures was arrested during the past week.

Good business done earlier with several foreign countries including the UK, the US, and the USSR provided enthusiasm to bulls. They had also calculated that with the outbreak of civil war in East Bengal, considerable business would be diverted to Calcutta. As this anticipated follow-up business was lacking prices drifted downward.

There has been so far no indication as to when the Government of India would reveal its plan to purchase B twills. In the last week, internal support was limited to the interest shown by private agencies and semi-government organisations. The State Trading Corporation's programme to attract overseas business by sending out lower quotations met with a setback with the authorities showing disinclination to register the contracts already entered into. In view of this, the STC's shipments had had to be held over, and unless the Government clarifies its stand in this regard, there would be many more instances of loaders sailing without cargo booked. B twills closed lower at Rs 268 and hessian 40" 10 oz at Rs 97 after being quoted higher at Rs 277.50 and Rs 101.

The recurrence of good rains and continued reports of good progress with regard to soil preparation and sowing imparted an easier trend to raw jute prices. The decline in goods also affected sentiment. Holders of the old crop hastened to unload. There were reports of good weather in Thailand, where also the crop is expected to reach a record figure. Fresh arrivals in the past week were about 30,000 maunds per day. Quotations closed as follows after losing Re 1.50 per maund on balance. Assam bottoms at Rs 60 Northern bottoms at Rs 58 and Daissee bottoms at Rs 61.50.

SHARP RETREAT IN OILSEEDS

BOMBAY, April 28

As crash in oilseeds earlier in the week, followed by a modest recovery towards the week's end, was a feature of trading in the oilseeds market. Earlier, prices almost crashed in both seeds and oils. The break in spot prices unnerved bulls in futures, which also declined sharply.

The crash in the market was mainly due to higher arrivals of new crop oilseeds in the producing centres. In Gujarat daily arrivals amounted to over 10,000 bags and prices there had tumbled sharply. Even at lower levels support was lacking. Financial stringency and fears of governmental steps to curb the price rise in edible oils accelerated the downdrift in prices. Credit curbs have made hoarding on a large scale extremely difficult, and as a result stockists and producers were offering goods even at lower prices.

Shippers were unable to book orders for castor oil. Mustardseed and groundnut supplies had improved beyond expectations. The resultant fall in prices was steeper than that in 1952. The pace for the current decline was set by castorseed. The supply position showed signs of marked improvement with increasing arrivals. Spot oilseeds and oils also declined due to improved supplies. However, towards the week's end there was a modest recovery on renewed support on technical considerations. But the undertone was still weak, especially in castorseeds. The sentiment improved on better spot advances as groundnut oil improved by a rupee. Linseeds improved owing to sustained shortage of spot linseeds and oil. Tenders of 10 tons were issued in linseed April, making a total of 1,060 tons. At the week's close, linseeds had recovered to their previous levels, but castor was weak and the June delivery coiled over three points lower. Spot prices in castor were also sharply lower. Commercial oil was Rs 2.50 lower, while B.S.S. was also down to an equal extent.

Comparative prices in rupees were:

Item	21-4-1971	28-4-1971
Castor April ..	181.50	
Castor June ..	127.75	124.12
Linseeds April ..	157.50	157.75
Linseeds July ..	152.00	152.75
G. Nuts Khandesh ..	184.00	185.00
G. Nut oil ..	43.30	41.30
Castor Madras Small ..	140.00	125.00
Castor Comm. oil ..	35.00	29.50
Castor B.S.S. oil ..	34.50	32.00
Linseeds Bold ..	154.00	155.00
Linseed oil ..	35.50	34.25

TEA IN GOOD DEMAND

CALCUTTA, April 27

The prevalence of strong demand for North Indian teas during last week's London sales has revived the hope of improved prospects for the current season. According to reports, prices for Assam teas, especially CTCs and orthodox kinds, and legg-cuts gained by 1 pence to 3 pence per kg. Trade circles accordingly think that exports are likely to increase.

In the meantime, internal buyers continue to build up their stocks, which is adequate proof that the country's internal consumption has kept pace with the rising trend on output. Dusts, on offer during last week's internal sale totalled 28,372 packages, which met with strong general demand. Good competition was offered to plain CTCs prices of which rose. Other kinds were fully firm. Orthodox kinds were readily absorbed, but the plainer types eased. Legg-cuts were fully firm. The quotations in rupees per kg inclusive of excise duty were: best Assam CTC dust 7.40 to 8.20 (nominal), good Assam CTC dust 6.50 to 6.80, medium CTC dust 6.10 to 6.40, plain CTC dust 5.30 to 5.80, medium Assam dust 5.70 to 6.30, legg-cut dust 5.40 to 5.80, and plain orthodox dust 4.80 to 5.20.

FOODGRAINS EASY

BOMBAY, April 27

During the week under review, an easy trend prevailed in the local foodgrains market. Among coarse grains, the prices of bajra (superior) at Rs 60-65 per quintal ruled steady. The demand was poor. The bajra stock with the traders totalled about 40,000 bags. Owing to the slack demand, maize declined by about Rs 2 to Rs 60 per quintal in sympathy with bajra. In pulses, gram (Punjab) receded by Rs 2 to Rs 78-80 per quintal on account of the slack demand in the face of good arrivals of new gram crop. The stock position of gram was estimated at about 12,000 bags. Urad (Khandesh new) at Rs 148-152 per quintal showed no change during the week. Tur (Berar white) at Rs 108-112 suffered a marginal setback of Rs 2 per quintal in line with gram prices. The arrivals were good but upcountry advices were discouraging. Moong (Chinai), despite heavy inflow remained steady at Rs 220-250 per quintal, due to strong demand.

SUGAR RISES

BOMBAY, April 27

The prices of sugar (C-30) at Rs 191-193 per quintal in the local sugar market, showed a nominal rise of a rupee. On account of good seasonal demand the current sugar prices are higher by about Rs 10 per quintal than the level a year ago. The city stock was estimated at around 2,000 bags only. During the week about 15,000 to 20,000 bags of sugar were sold by the co-operative sugar factories at the rate of Rs 178.50-182 for 'C' and 'D' grades, respectively.

BASE METALS ACTIVE

CALCUTTA, April 27

The base metal market is getting more and more active day by day. The systematic steps being taken by the Minerals and Metals Trading Corporation to maintain the supply of non-ferrous metals to the organised sector are viewed with satisfaction. A particularly welcome aspect of the trend of past week was the increased number of inquiries coming from upcountry areas. At the same time, it should be noted that much would depend upon the forthcoming import policy as well as the Union Budget which are waited eagerly in the hope that these would provide for recovery and expansion. In the meantime, a noteworthy event has been the provision under loan agreement for the import of considerable quantities of scarce industrial raw materials such as copper, zinc, lead, tin and nickel. It is also reported that the US would facilitate the import of these items from other countries also.

In the past week, non-ferrous scrap was in good demand from re-rollers. Consequently prices rose and the continued steadiness

in overseas markets was also a factor discouraging holders from unloading. Brass sheet cutting scrap was unchanged at Rs 1,030 per 100 kg, but honey quality at Rs 1,020 added Rs 5. At Rs 1,440 clean copper wire scrap gained Rs 10 with utensil copper scrap receiving support at the unchanged level of Rs 1,390. Buyers preferred to adopt a cautious tendency since they believed that the import policy would be favourable for increased imports. Alloy makers accorded support to virgin zinc to push its price from Rs 448 to Rs 465. Aluminium ingots were active at Rs 800. Aluminium scraps also met with increased support to take up utensil scrap from Rs 500 to Rs 510, and sheet cutting from Rs 520 to Rs 530. Virgin lead at Rs 445 added Rs 5 and scrap improved from Rs 365 to Rs 375. Tin was, however, neglected at Rs 4,800.

KIPS BULLISH

MADRAS, April 24

Hides and skins market remained bullish despite small export turnover because of the high prices quoted by shippers who, in turn, had to stick to their levels in view of the firm trend in the raw centres.

There was steady call for cow hides especially lower selections in light and medium weights. Availability of cow calf was meagre and whatever small stocks of buff calf was on offer was booked freely.

Importers paid increased prices for goat skins, especially higher selections, very reluctantly. Sheep skins market was steady, as in the past week. Tanners and shippers have been feeling great financial stress due to the dock labour strike that tied up ships for over two weeks.

BULLION DECLINES

BOMBAY, April 27

An easy trend prevailed in the bullion market during the past week. Silver lost further ground during the week due to improved supply position in the wake of slack offtake. The weak overseas advices also pushed down prices further. Gold closed quietly steady after moving both ways. Sovereign was fully maintained.

Silver (.996 fineness) began Rs 2 lower at Rs 604 and lost further ground in the following session. It declined further in the subsequent sessions and closed the week at still lower level of Rs 596, the net loss over the week being Rs 8. The weekly delivery was mentioned at between Rs 602 and Rs 600. The weekly average arrivals and offtake of silver aggregated 32 bars and 27 bars, respectively.

Primary gold in unofficial trading commenced fifty paise less at Rs 187 and was quietly steady at that level in the subsequent sessions. It closed the week at that level of Rs 187 with a net loss of fifty paise over the week. Standard gold began trading a rupee lower at Rs 198 and wound up the week at that level today. The net loss over the week was a rupee. Sovereign was neglected at Rs 174.

CALL RATE EASES

BOMBAY, April 27

Comfortable conditions continued to prevail in Bombay's short-term market during the past week. The call rate came down further to 6 per cent from 7½ per cent in the previous week. In Calcutta, scattered renewals were done at 5½ per cent.

During the week ended April 16, foreign exchange reserves of the Reserve Bank of India increased by Rs 10.82 crores to Rs 367.58 crores. While foreign securities rose by Rs 15 crores to Rs 288.42 crores, balances held abroad declined by Rs 4.18 crores to Rs 79.16 crores. There was an expansion of Rs 29.27 crores at Rs 4,390.26 crores in notes in circulation.

Week ended April 16 recorded a decline of Rs 25.77 crores at Rs 4,714.67 crores in the total credit made available by scheduled commercial banks. Aggregate deposits rose to Rs 5,952.62 crores from Rs 5,933.69 crores. Borrowings from the Reserve Bank were lower at Rs 224 crores (Rs 270.26 crores).

Notice

THE GWALIOR RAYON SILK MFG. (WVG.) COMPANY LIMITED

Registered Office:
Birlagram, Nagda, M.P.

NOTICE

NOTICE IS HEREBY GIVEN THAT the Board of Directors of the Company at their Meeting held on 15th April, 1971 have declared dividends on the Preference Shares of Rs 100 each in the Company, at Rs 8.57 per share on Series 'A' and 'B' and at Rs 9.30 per share on Series 'C' for the year ending 31st March, 1971, subject to deduction of tax under the provisions of Income-tax Act, 1961.

The dividends will be paid on or after Thursday the 20th May, 1971 to those shareholders whose names stand on the Registers of Members of the Company as at the close of Friday, the 7th May, 1971.

It may be noted that the Registers of Members and the Transfer Books of the Company relating to the above shares are not being closed for the above purpose.

By Order of the Board,
B. N. PURANMALKA
Secretary.

BIRLAGRAM, NAGDA.

V.I.P.'S stop here so very often !

Because we care for their moods, and hunches, and whims.
And we know they like red carpet - which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines, the variety
programmes in the ELDORADO and STARLIT Restaurants
or an open air session at RAMBLE Connaught Place.

We have a telephone in each room, and its own
thermostat control.

What's more, we don't treat them as come-and-go
guys; but like real house guests!

CONTENTED father sits reading the magazine beside his favourite reading lamp... house-proud mother gets ready the dinner, cooked just right, over the electric range... the children listen happily to music over the radio. This is the everyday wonder of electricity. More than half a century has passed since Jamsetji Tata's great vision was realised... the vision of Bombay a smokeless city, powered by electricity.

Today, Tata's hydro and thermal power stations together generate more than six per cent of the country's entire electric power bringing it to the people of Bombay and its surrounding area.

The meaning of currency crisis

FOREIGN exchange markets are settling down after the upheavals caused by the currency crisis last week. Buying and selling margins have narrowed and the bear's grip on the dollar is weakening. The price of gold, however, continues to mount on the London bullion market and has reached the highest level for 18 months. A threat had developed to the agricultural policy of the European Economic Community on the question of concessions to be paid to the German farmers as a result of the floating of the mark. West Germany, however, made an important concession and agreed that no compensatory measures would apply if the level of the mark did not exceed 2.5 per cent above its official parity and this has saved the policy at least for the time being.

It is generally agreed, however, that the present easing of the situation may not last long unless in the meantime some concrete steps are taken to ensure that the crisis would not be repeated. While there is general agreement regarding the need for stabilising measures, there is wide disagreement on what should be done to ensure stability. The United States is blamed in Europe for the current monetary crisis. It is suggested that Europe is forced to pay the price of the dollar's sickness and mounting isolationism in America. It is pointed out that the currency system in its present form would survive only if the United States takes care of its balance of payments, or a world-wide balancing of all currencies takes place. The US dollar is still over-valued and the national budget of the US remains in disorder. These are unsettling factors and unless they are taken care of, the currency crisis would be a recurring phenomenon. This being the reading of the situation from

the European side, the measures suggested are devaluation of the dollar, which means the same thing as raising the official price of gold, or taking measures to wipe out the US's balance of payments deficit.

Some former US Government officials have also emphasised the need for bringing the payments deficit into balance. They have pointed out that this was a national and international responsibility of critical priority. The concern of these American critics is justified by the fact that last year the US balance of payments deficits touched a staggering peak of about \$10 billion. In the first three months of the current year, the US had an astounding quarterly balance of payments deficits of about \$5 billion. In other words, if this trend persists, theoretically it may be argued that the US during this year may have a deficit of about \$20 billion! Even the richest nation on the earth cannot go on living beyond its means in terms of foreign exchange. America must earn at least as much as it spends and invests abroad. That it has failed to achieve this objective is, according to the Europeans, the basic cause of the currency crisis in the Western world.

The present US Administration, however, is not unduly perturbed by the developments on the European markets. It has been made abundantly clear that the United States had no intention of devaluing the dollar by reducing its gold value. As far as the balance of payments deficits are concerned, again, no one is left in any doubt that the White House is determined to stick to programme of getting production up and unemployment down.

Mr John Connolly, the Secretary of the Treasury, has declared: "This nation is continuing its fight against inflation and is making more progress than any other nation I know about." The obvious reference is to the recent rumours about a possible revaluation of the mark and the speculative rush into that currency as a result of these talks. The official view in the United States is that expansion in the US would ultimately result in the improvement of its balance of payments and especially its trade balances.

The Americans have been arguing that if West Germany could aspire to a policy of full employment and economic expansion, there is no reason why the US should not do the same. While one could appreciate this line of reasoning on the part of the United States, it needs to be remembered that it has a special responsibility in view of the fact that Euro-dollars have taken over the international role which was once played by sterling. This Euro-dollar pool is today worth \$50 billion. During 1970, the banks in the US got rid of Euro-dollars worth around \$12 billion. This resulted in a sharp fall in short-term Euro-dollar rates, and in spite of the recent discount cuts by most West European Central Banks thousands of millions of dollars have been withdrawn from the Euro-dollar market and converted into D-Marks. This influx has to be stopped somehow and the US has to play its part in this. It is true that it has taken two steps to help in damming the rush. It has raised short-term interest rates and has issued bonds to soak up Euro-dollars. But they have not been of much help in meeting the critical situation.

It needs to be realised that the international monetary system is standing at the crossroads today. Palliative measures such as devaluation, revaluation and exchange control cannot help the system to master the recurring crises. A major decision is called for. Sterling has ceased to be a major currency in which countries would hold their foreign exchange balances. The dollar has taken its place. Britain realised after the Second World War that it required tremendous resources and a will to sacrifice, up to a point, national interests if it had to manage a currency forming the basis of international monetary transactions. If the dollar has to maintain the position it has acquired as the main currency for international trade and a major currency for its international settlements, the US will have to accept the responsibilities that go with it. If it is not willing to do so, world powers will have to sit down in a conference to find a way out. It is unfortunate but true that the International Monetary Fund takes a backseat whenever there is a major currency crisis affecting the rich world. The SDRs have failed to help even in mitigating such crises. Therefore, if the exchange rates are to be kept stable, some other means will have to be found. It seems the major decision to be taken is whether it is possible to reconcile stable exchange parities with the sovereign powers claimed by nation States in the modern world.

So far as India is concerned, it is in her interest that the stability of the exchange rates is maintained. It has huge debts to repay and it is easier to manage this if exchange rates are steady. The present crisis, however, should act as a warning. Both the people and the Government of this country have to keep constantly in mind the simple economic proposition that economic progress is possible only if there is restraint in consumption and the most economic use is made of productive resources in men as well as in material. Yet we have a very vital stake in the smooth working of the international monetary system which would enlarge international trade and thereby help us to earn more foreign exchange which we so badly need.

Coming to brass tacks

IF the FICCI annual meeting in New Delhi last month was notable for the absence of confrontation between the Government and industry, the more recent meeting of the All India Manufacturers' Organisation in Bangalore revealed increasing signs of rapport between the two. The AIMO President's speech and the resolutions

adopted by the Organisation showed a greater understanding of the Government's economic and social objectives and a willingness on the part of industry to reorient its ideas and efforts so that it can give of its best in attaining these objectives. It would be uncharitable to the business community to say that it had no alternative but to fall in line with the Government after the overwhelming victory of Mrs Indira Gandhi's party in the recent elections to the Lok Sabha. Obviously this induced fresh thinking on its part and none but those who are wooden would have failed to rethink in the face of such a clear verdict of the electorate.

But this should have so soon crystallised into a positive response by business and industry is not entirely due to the poll outcome. At her first Press Conference after the elections, Mrs Gandhi said that in the present day context left and right policies were out of date and the Government would pursue pragmatic policies. Such assertions in the past have turned out to be hollow, but during the two months the new Government has been in office it has announced measures which give rise to the hope that pragmatism may become the keynote of its policies. The business community's readiness to "adequately participate" in the programmes for economic development and social progress is more in response to this, though it is true that pragmatism has been made feasible by the elections. The mandate given by the people in no uncertain terms has helped to free the Government to a great extent from doctrinaire pressures.

In the prevailing situation, pragmatism can mean only one thing—increasing production all round. Happily, the measures announced by the Government lately are designed to achieve this end. To take a recent instance, it has decided to let the private sector set up about half a dozen mini steel plants employing the continuous casting process, each with the capacity of 50,000 tonnes. This shows that it is now inclined to be more flexible in the matter of steel making which is reserved for the public sector under the Industrial Policy Resolution. It has also relaxed its policy in regard to continuous casting machines. Private parties need not wait until the Heavy Engineering Corporation is able to manufacture them. They can now import these. Sponge iron plants are also to be allowed to be established in the private sector.

Timely steps have been taken to increase the availability of steel on which depends rapid industrial growth. Mr S. Mohan Kumaramangalam informed the Iron and Steel Advisory Council, which met in New Delhi this week, that licences of the value of Rs 42 crores had been issued in addition to the import of 250,000 tonnes of steel allowed to actual users, exporting units and public undertakings. Further, Hindustan Steel has been asked to import steel in bulk to the extent of 500,000 tonnes. At the same time, in order to reduce its dependence on steel imports the Government has wisely decided to import Rs 19 crores worth of refractories and spare parts which should contribute to greater utilisation of steel capacity in the country. Indigenous steel production went down to 6.1 million tonnes in 1970-71 from 6.4 million tonnes in the previous year. While this is largely due to work stoppages arising from strikes and lockouts, operational bottlenecks have also taken their toll. The latter, however, can be remedied through timely imports of essential spares and materials.

The Government has not ignored the needs of other industries. For instance, recently it gave licences to a number of private enterprises irrespective of their size to set up units for the manufacture of soda ash, a basic chemical which is used for producing other chemicals and in a variety of industries. Also, by finally doing away with the banned list of industries which was introduced to restrict the creation of additional capacity in those branches of industry where adequate capacity already existed, it has removed a psychological irritant to industry. All this is a heartening trend which can be strengthened only by the Government and the business community by building up numerous bridges of trust between Government and business.

WHEN the Chinese startled the world early last month by inviting American Ping Pong players to Peking during the World Table Tennis Championship meet in Nagoya, Japan, they also made a minor but significant economic gesture to their Japanese hosts which delighted quite a few Japanese industrial giants. The Chinese Table Tennis delegation purchased several Toyota passenger cars, two Toyota micro-buses and two diesel buses from Hino motors as "souvenirs". It was for the first time that China was buying automobiles from Japan. The purchases of these "souvenirs" also indicated the possibility of Japan exporting automobiles and trucks to China—a favourite dream of the Japanese auto-makers. It was not surprising, therefore, that some of the Japanese steel companies, chemical and fertiliser complexes and automobile manufacturers vied with one another in raising funds to finance the tour of the Chinese Ping Pong players to various parts of Japan. The total bill that the Japanese industry footed for this goodwill tour of the Chinese Communist Ping Pong players amounted to about Rs 10 lakhs (\$140,000). It was also not surprising that such strangers to Chinese trade as Toyota motors contributed much more than the well-known "China trade firms" of Japan.

Throughout their 1,300-year-old ties the Chinese and Japanese have developed a peculiar "love-hate" relationship. In the 'thirties, however, this was converted into pure hatred when Japan occupied some parts of China. In any relationship between Peking and Tokyo the spectre of Japanese militarism will always haunt the Chinese, irrespective of the fact whether communists or nationalists are in power. But it is also true that both China and Japan realise that geography has so decreed that they should learn to live together.

Geography has also played a crucial role in China-Japan trade. The trade between the two countries had been going on since the establishment of the Tang dynasty in China in the 7th century. In the present century the extension of Japanese rule over key areas of China, particularly over most of her ports through which her foreign trade was carried on, created favourable circumstances for the expansion of a semi-colonial type of trade by Japan with China. In the late 'thirties, about 15 per cent of Japan's imports came from China while nearly a quarter of her exports went to that country. China exported mainly raw materials—soyabean, iron ore, coal, pig iron and salt—in exchange for Japanese textiles and capital goods. In fact, these capital goods were meant mainly for the Japanese-owned industrial enterprises in occupied Manchuria. During the Second World War the trade between the two countries was paralysed, but immediately after the war a beginning was made to resume the economic ties between the two neighbours.

The post-war trade relations between China and Japan mirror rather graphically the ambivalence that exists in the psychos of these countries towards each other. They also reflect the inevitable tensions caused by Japan's close relations with the US and Taiwan. Although Japan has no diplomatic ties with China, both the countries have developed peculiar institutions which serve their interests in matters of

Ambivalence in Japan-China ties

By Vadilal Dagli

trade and camouflaged diplomatic activities. The year 1950 witnessed a nominal beginning in trade. In that year the volume of trade between the two countries was of the order of \$60 million. But there was a sharp fall during the period of the Korean war when Japan's exports to China dwindled to a mere \$0.6 million, while her imports from that country dropped to \$15 million. But an attempt was made to resume trade, and the first Japan-China agreement for trade on a non-governmental basis was concluded in 1952. As a result of these non-official efforts, the trade volume touched \$150 million in 1956. Two years later, in 1958, the China-Japan relations deteriorated as China made an attempt to use the trade bait to topple the Kishi Government. By 1959 the volume of trade between the two countries dropped to \$20 million.

But the estrangement between China and the Soviet Union provided an unique opportunity for Japan to enter the Chinese market. China also wanted an alternative source of imports of capital goods. So Peking evolved some face-saving formula to resume trade with Japan sans diplomatic relations. In 1960 trade between the two countries began under the "friendly-firms" formula. The "friendly firms" were those Japanese firms with which China was willing to trade. These firms were recommended by Japanese political parties and public organisations which were sympathetic to the Mao regime. Two years later, on November 9, 1962, a "memorandum" on China-Japan trade was signed in Peking by Liao Ch'eng-chih, Deputy Director of the Chinese Ministry of Foreign Affairs, and Tatsunosuke Takasaki, Japanese Minister of Economic Planning and International Trade and Industry. Initially it was decided to have a five-year agreement which ended in 1967. Now the Memorandum Trade Agreement is extended annually. Thanks to these devices a non-official trade office of Japanese business interests has been established in Peking. Most of the functionaries of this trade office are retired government officials. The Chinese Government also maintains a similar trade office in Japan. These are fairly large establishments and they are aptly nicknamed 'trade embassies'.

These ingenious devices helped China at a time when the deterioration of economic relations with the Soviet Union had completely unsettled her foreign trade. It was also useful to Japan as she was eager to establish a foothold in the growing neighbouring market of over 700 million people. After the establishment of "friendly firms" and the "Memorandum Trade" relations, the volume of trade between the two countries almost doubled every year and in 1965 it reached a peak of \$470 million. The year 1965 also witnessed another important change in China-Japan trade. During that year Japan became a net exporter instead of a net importer from China. In 1966 the trade volume again registered a spurt to reach \$620 million. Because of the cultural revolution and of the thrust by West Euro-

pean countries to have their share of the Chinese market, Japanese exports in 1967 and 1968 declined. In both these years they remained at a low level of \$550 million.

But 1969 witnessed another spurt in Japanese sales to China. Japan also made a determined bid to take advantage of the Chinese Government's new policy of opening their country to the non-communist world from whom they now import four-fifths of their requirements and Japan replaced the Soviet Union as the main trading partner of China by 1969. In that year nearly one-fourth of China's imports worth \$410 million came from Japan and about 12 per cent of China's exports valued at \$225 million went to Japan. In 1970 the volume of China's trade with Japan rose to \$825 million; Japan's exports amounting to as much as \$570 million. The Japanese industry has been hoping that in the current year the volume of China-Japan trade may be pushed as high as \$1,000 million.

China's import pattern has also undergone a sea-change. Iron and steel and chemical fertilisers now account for nearly two-thirds of her imports from Japan. Machinery and instruments and chemical products are other major items. Japanese imports from China, on the other hand, are confined to agricultural and fisheries products, minerals and textiles. In the current year Japanese steel exports to China will shoot up to 1.5 million tonnes from 9 lakh tonnes last year. The recent offer by the Chinese to buy plant equipment including a chemical fertiliser plant from Hitachi has also electrified the Japanese business scene. It is these developments that have prompted the Japanese business interests to forecast that this year the Japan-China trade might touch the billion dollar mark.

But Japan has been paying a special price in terms of her self-respect while building up her trade with Peking. After her estrangement with the Soviet bloc, China decided to keep politics out of trade. But in this Japan is an exception. With every dollar of additional trade, China wants to wrest some political concession from Tokyo. The annual ritual of renewal of Japan-China Memorandum Trade is a humiliating experience for Japanese political and business leaders.

For developing trade with China Japan will do everything possible short of alienating the US. The Japanese firms are slowly curtailing their interests in Taiwan and South Korea as this is one of the conditions of China for expanding trade with her. The Soviet Union recently asked Japan for loans from her commercial banks to develop Siberia. Japan has not responded to this request lest it should offend China. The Japanese are also exploring the possibility of setting up a special export credit institution to give long-term credit to China. So the seventies might witness a new upswing in China-Japan relations. □

MARKET GOSSIP

Managers' remuneration

THE Delhi High Court has given an important judgment dealing with the administrative ceilings on managerial remuneration fixed by the Central Government through revised guidelines in this matter. Under Section 198(1) of the Companies Act, a ceiling has been fixed on the total managerial remuneration payable by a public company to its directors. This ceiling is fixed at 11 per cent of the net profits of that company for that financial year. Under the guidelines issued by the Central Government, administrative ceilings have been imposed on this remuneration. It is Rs 90,000 per annum on salary including dearness allowance and all other fixed allowances and Rs 30,000 as perquisites which together come to an overall ceiling of Rs 1,20,000 per annum.

This administrative ceiling was challenged by the Upper Doab Sugar Mills Ltd before the Delhi High Court and the Court ruled that the executive cannot go beyond the statute even if the purpose was to conform to the overall socio-economic objectives of State policy. This was described by the Court as a short-cut to improve public condition. The Court added that it appreciated the Company Law Board's object but preferred that it should be achieved through a legislative amendment to the Act rather than through the imposition of ceiling through administrative action.

It was argued on behalf of the Board that it had the right to change the remuneration fixed by the company by virtue of its power under the Company Law to impose a condition while approving the appointment of the first managing director. The Court accepted that the ambit of the power given under the law to the Central Government regarding the nature of the conditions to be imposed is worded widely, but there were "inherent and built-in limits". These limits are the provisions of the Act, the statutory requirement to exercise discretion reasonably and judiciously and the requirement to ensure that the nature of the conditions imposed is not contrary to the provisions of the Act. This means that the executive is not free to impose a condition which is against the statutory maximum permitted. If the Central Government wanted to impose the ceiling on the ground of State policy it will have to amend suitably the Companies Act. Mr Raghunatha Reddy has given an indication that this may be considered while an amending bill to the Companies Act is brought before Parliament. □

Bonus issues

THE restrictive guidelines laid down by the Government on bonus issues from April 1, 1970, namely, there should be a gap of at least 18 months between two announcements, there should not be more than two bonus distributions by the same company in five years and bonus shares should not be issued in lieu of dividend, have already restrained the bonus issue programmes of companies. During the

quarter January-March this year, 22 companies issued bonus shares worth Rs 9.7 crores as against Rs 20.9 crores by 43 companies in the same quarter last year. During October-December 1970, bonus issues were lower at Rs 5.8 crores compared to Rs 9.4 crores in the corresponding period of the previous year.

However, the issuance of bonus shares during the first two quarters (between April-June and July-September 1970) immediately after the new guidelines came into force was higher when compared to the corresponding period of the previous year. But this was mainly because of the clearance of backlog of proposals and consents approved prior to the application of the new guidelines. Despite this, the total bonus distribution during 1970-71 (April-March) remained lower at Rs 28.7 crores as against Rs 35.7 crores distributed during 1969-70. The ratio of bonus issues during January-March 1971 ranged between 1:1 and 1:6 as against 1:1 and 1:10 in the corresponding period in 1970. □

Verdict on National Rayon

THE Company Law Board has issued an order on the application filed by the Chinoy Group with a view to ensure that the Kapadia Group did not succeed in gaining control over the management of the National Rayon Corporation. The application was under two sections of the Companies Act. They had prayed for the intervention of the Government under Section 250 of the Companies Act against what they alleged amounted to cornering of shares by the Kapadia Group. This section empowers the Central Government to restrict under certain circumstances transfer of shares, issue of shares, voting rights and payment of dividends. Under sub-section 4 of this section, the Central Government is specifically empowered to direct that any transfer of shares in the company for a period not exceeding three years would be void if it believed that a transfer of shares in a company is likely to change the composition of the Board of Directors. This part of the application has been rejected by the Company Law Board.

The Chinoy Group had also gone before the Company Law Board with a complaint that an attempt was being made by the Kapadia Group to gain control over the management of the company. As regards this part of the complaint, the Company Law Board has directed under Section 409 of the Companies Act that no resolution passed or that may be passed or action taken or may be taken to effect a change in the Board of Directors after the date of complaint shall have any effect unless confirmed by the Company Law Board. The election at the last annual general meeting and the co-option were, however, confirmed. Finally the Board has decided to issue show-cause notices to the National Rayon Corporation, Chinoy Group and Kapadia Group under Section 408 of the Companies Act which empowers the Government under certain circumstances to appoint not more than two

persons to hold office as directors of the company.

This is intended to prevent the affairs of the company being conducted in a manner oppressive to any member of the company, prejudicial to the interest of the company or prejudicial to public interest. Thus there is a likelihood of Government nominees being appointed on the National Rayon Corporation Board of Directors unless the two groups succeed in establishing that the circumstances contemplated under Section 408 have not arisen. This is a remote possibility. The battle between the two groups is thus likely to result in Government intervention. Market circles are closely watching the developments. There is a general feeling that the uncertainty regarding the management of the company makes it difficult for the Corporation to plan for the successful working and progress of the company. □

Unsold cotton stocks

WITH only three and a half months for the current cotton season to end, there is ironically enough a glut in cotton in Maharashtra and, at any rate, with the State Co-operative Marketing Federation. The season which witnessed perhaps the longest spell of scarcity conditions leading to unprecedented price spurts, is now witnessing a crisis of another kind, namely, unsold stocks. Maharashtra's Minister for Co-operation, Mr Y. S. Mohite told the State Legislature towards the end of last week that the Federation was saddled with unsold stocks of cotton worth Rs 1 crore. As a remedy, the State Government had urged the Textile Commissioner to relax the stock stipulation. The implication is that the mills are not buying cotton because of the stock limits. The actual position, however, is that the mills do not have the wherewithal to effect cotton purchases because of the curbs by the Reserve Bank. □

Silver falls

CURRENCY crisis abroad is having its impact on unofficial deals in dollar as also the bullion prices. The dollar is reported to be fetching Rs 13.50 as compared to Rs 14 a fortnight ago. But the buyers are stated to be few. The silver prices have almost crashed. In the weekly delivery the prices have come down from Rs 595 to Rs 583.75 per kg. Market circles believe that supplies of US silver to the UK will increase with an adverse impact on the prices in UK. Since the prices here are influenced by the UK market, the smuggling of silver from here may be affected. The onset of moonsoon would be another factor that may bring down the smuggling activity. The marriage season would be coming to an end within the next few weeks. This would be a bearish factor as far as demand is concerned. The events in Bangla Desh have also had some effect on silver supplies. The arrivals of the white metal in Calcutta have increased. In tune with the trend in prices in markets abroad the gold prices here also moved up from Rs 187 per 10 gm to Rs 192, but later came down to Rs 190. □

Is the long way the right way home?

Not unless you want to send your goods on a pleasure cruise. Surface shipments mean long journeys skirting continents, delays in berthing at ports, time lost in congestion at docks. Add to this the paperwork of filling forms, checking inventories, warehousing—and you might as well let your trade take a holiday.

Meanwhile your goods are unsold, your money tied-up, you have a dissatisfied customer on your hands, and your competitors have probably stolen a march over you.

Speed your cargo by air—it's a faster, cleaner, trouble-free operation. And profitable, too.

If you can't make a complete switch to air exporting start now with BOAC's Air/Sea Mix Plan. Send the bulk by sea but use air as often as possible and always in emergencies by building an allowance into your costing system. This extra cost is offset by spreading it over every unit you send out.

Ask BOAC or your Cargo Agent. They'll tell you how you can benefit. Don't let your money drift, lift it to profit.

 **BOAC**
CARGO

No? then Air Cargo is the answer!

SURVEY

POLITICS OF GUJARAT GAS

THE issue relating to the unilateral raising of the price of gas by the Oil and Natural Gas Commission to the consumers of Gujarat needs to be solved amicably. The consumers of gas in Gujarat feel that the ONGC ought to have consulted the important consumers before raising the price of gas from Rs 50 at the well-head to Rs 106 per 1,000 cubic metres. It is calculated that with the transmission and other charges the price to be paid by the consumers will be as high as Rs 146. Mr P. C. Sethi, Union Minister for Petroleum, has argued that the Commission had worked out the price strictly in terms of Dr V. K. R. V. Rao's award. This is challenged by the consumers in Gujarat. It is argued that under the award the revision in price in 1971 had to be preceded by the review of the actual position regarding output and demand during the period covered by the award. This implies that the important consumers of the gas ought to have been taken into confidence regarding the basis on which the computation was made. The ONGC, however, has failed to share even with the Government of Gujarat the information at its disposal on which the price was fixed. It is rather unfortunate that Mr Sethi should have argued that the matter was one for discussion and settlement between the ONGC and the consumers. Even if this approach is accepted the Commission ought to have shown the courtesy of consulting the Gujarat Government on this issue. The Gujarat Electricity Board and the Gujarat State Fertiliser Company are important consumers of the RFO gas and these concerns being in the public sector the State Government has a stake in this matter.

Even apart from this, any upward revision of the price of industrial power has its impact on the general price level in the State and no State Government worth its name could remain indifferent to such a decision. The Government of Gujarat has taken a stand which is quite reasonable on this issue. All that the Government wants is that the matter should be settled either through negotiations or through arbitration. Mr Hitendra Desai, the Chief Minister of Gujarat, has categorically stated that his Government has already accepted the principle of arbitration. He has also sought the intervention of the Prime Minister in this dispute.

Mr Sethi too had stated in New Delhi that the ONGC did not want to impose a price unilaterally. It was prepared to discuss with the consumers, to inform them of the basis on which the ONGC has computed the price and to give them full opportunity to express their point of view. Mr Sethi would be well advised to take the Gujarat Government also into confidence. It is the duty of all the parties concerned to see that the dispute is not escalated to a point where it might be interpreted as a confrontation between the State and the Central Government. □

INDO-UK TEXTILE TALKS

INDIA'S Foreign Trade Minister, Mr L. N. Mishra, seems to have drawn a blank in his negotiations with the British authorities in London to persuade them to desist from imposing a 15 per cent tariff on cotton textile imports from the Commonwealth countries from January 1, 1972. This was not totally unexpected as earlier efforts to make the UK change her mind had not proved successful. However, a glimmer of hope was raised by the change in the Government there (the decision to impose the tariff was taken by the Labour Government) and the assurance given by Mr Edward Heath to Mrs Indira Gandhi during his visit to this country last January that his Government would look into this matter again. Obviously, the fresh look at the proposal has not induced any change in the attitude of the UK Government.

But on that account India should not throw up the sponge. There are still more than seven months to continue her efforts to make Britain see reason. About 20 per cent of India's total textile exports worth Rs 100 crores goes to the UK. A 15 per cent tariff will certainly gravely affect her exports of textiles to that country as this will give an unfair advantage to other textile exporting countries like Japan, Taiwan and South Korea and some countries of EFTA which will not be subject to this impost. Apart from the element of discrimination involved in the proposal, there is something amoral about Britain, in the first instance, deciding on this step unilaterally.

Since appeals to the UK's conscience have been unavailing, other ways of putting pressure on her to change her stand must be found. One way is to make Britain understand the political implications of her move. Mr Mishra did well to highlight this aspect during his talks with the British authorities and to tell them bluntly that this would seriously erode Commonwealth co-operation and coming in the wake of another irritant provided by the British decision to sell arms to South Africa might cause irreparable damage to the Commonwealth. □

COSTLIER AIR TRAVEL?

IN asking the Government to allow it to increase its fares by 25 per cent, the Indian Airlines is really asking the public to pay the price for its mismanagement and poor industrial relations. Contrary to the earlier expectation of a net profit of Rs 3.42 crores in 1970-71, the IA has now estimated that it will end the year with a loss of Rs 4.65 crores. This is largely due to a series of labour troubles, including a prolonged strike by the pilots during the year, culminating in the lock-out in March. The inept handling of these matters by the IA management is as much to blame as the unreasonableness of a section of the workers for this state of affairs.

The IA, however, has not sought fare increases on this ground probably knowing that this will not cut much ice with the Government, not to speak of the ad-

verse public reaction it will invite. Its case rests mainly on three grounds: (a) excise duties payable to the Centre and sales tax charged by the States on aviation fuel have been going up every year, (b) the wage bill which now amounts to Rs 15 crores will rise by Rs 3 crores when new wage agreements which are under negotiation are concluded, and (c) the re-routing of IA flights in the eastern sector has increased the operational costs.

But the resultant increase in expenditure will be more than offset by higher earnings from the operation of Boeing 737s on the trunk routes. When the IA operates its full complement of these planes—the schedule for the introduction of Boeing 737s in its services has been somewhat upset because of the pilots' strike early this year which affected their training programme—it will have considerably augmented its carrying capacity and achieved a quicker turnround of its fleet which will increase its revenue substantially. The IA's experience of the introduction of Caravelles which resulted in a steep increase in passenger traffic and, more important, pulled the Corporation out of the red should convince it that the phase of profitability which began with the Caravelles would continue if it is not bedevilled, as it was in 1970-71, by incessant industrial strife. That year, indeed, was an abnormal one for the IA. So, on this score, as also of higher operational costs, a fare hike cannot be justified. □

SLOWER GROWTH FOR TEA

THOUGH the Fourth Five-Year Plan envisages an annual compound rate of growth of 1.7 per cent in Indian tea exports, a detailed study published in the latest issue of the *Reserve Bank of India Bulletin* estimates that the growth rate will be only about 1.2 per cent. In arriving at this figure, the study has taken into account not only the exportable surplus that India is likely to have, but also the capacity of the world market to absorb increases in tea exports. Assuming that the growth of 2.7 per cent in production achieved between 1960-61 and 1968-69 would be maintained during the Fourth Plan, tea production in India would be around 450 million kg in 1973-74. Domestic consumption increased in the sixties by 7.3 million kg per annum on an average. However, a higher growth rate in consumption is now anticipated because of the increase in per capita income, urbanisation of population and the spread of tea-drinking habit. The study has assumed that consumption within the country will increase by 8 million kg annually during the Fourth Plan. On this basis consumption will rise to around 230 million kg by 1973-74, leaving an exportable surplus of 220 million kg.

World tea exports were virtually stagnant until the mid-sixties with an annual average growth rate of less than 1 per cent. Thereafter, it has marginally improved. The study, therefore, envisages a growth rate of 1 per cent in world tea exports during the Fourth Plan period. On this

assumption world exports in 1973-74 would be of the order of 625 million kg as against the annual average of 596 million kg during the four years 1968-69. During the period 1961-68 the share of India in world tea exports declined from 38 per cent to 34 per cent. Under the Mauritius Plan of regulation of world tea exports, the total exports for 1970 have been fixed at 1,311 million lb (596 million kg) and India and Ceylon have been allocated a joint quota of 410 million kg. The study estimates that India's share of world tea exports in 1973-74 will be around 35 per cent, i.e. around 220 million kg which corresponds with the exportable surplus she will have in that year. □

CENTRAL RULE IN GUJARAT

IT is for the first time since the formation of the State in 1960 that Gujarat is having the President's rule. The developments in the last few days made any other course impossible. The Chief Minister, Mr Hitendra Desai, had at one stage suggested that the Assembly might be dissolved and his Government be permitted to act as a care-taker government till a new poll was held. The Governor of Gujarat, Mr Shri-man Narayan, did not react favourably to this suggestion. Perhaps he thought that the Congress headed by Mr Sanjivayya might be in a position to form a Government. If this was possible that would have been a better course because the Assembly was scheduled to meet in June to pass the Budget. A duly constituted Government and the Assembly should normally take the responsibility of determining the budgetary proposals in a democracy.

The latest position, however, at the time when the Governor recommended the President's rule for the State was that the Old Congress commanded 68 votes in the Assembly, the New Congress 67, the Swatantra Party 11, the PSP 3, Jana Sangh 1 and independents 13. This being the position the Governor seems to have rightly felt that the New Congress was not in a position to form the Government. The recommendation of the Chief Minister was also not workable because in the absence of the Assembly the Budget could not be passed. The only logical step, therefore, was the President's rule.

The opposition parties have sought to blame the Governor for not affording an opportunity to the New Congress to form the Government. In the present atmosphere of defections and counter-defections the formation of the Government by the New Congress would not have served the cause of democracy. It is now for the people of Gujarat to decide whether they wish the sorry state of affairs that prevailed in the State for the last few days of Mr Hitendra Desai's Government to continue or whether they are in a mood to punish all those who are not able to make up their mind regarding their political allegiance. Gujarat had so far the reputation of being a State with steadfast loyalties. The fresh elections should give the people a chance to remove the reputation. □

Notes :

- Estimated by Commerce Research Bureau.
- At post-devaluation rate.
- While estimating foreign exchange reserves, SDRs transactions that might have taken place on February 28, 1971 have not been taken into account.
- The figures indicate percentage change during the current calendar year upto the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

THE President promulgated on Thursday (May 13) night the General Insurance (Emergency Provisions) Ordinance, 1971, which vests in the Government with immediate effect the management of all general insurance companies, Indian as well as foreign, doing business in India. This is the first and preparatory step to the nationalisation of general insurance through legislation in the ensuing session of Parliament. The Government proposes to appoint custodians for all these companies in a day or two. Till then the existing managements will continue to be in charge but as agents of the Government. They will be free to carry on normal day-to-day transactions but important transactions would need the prior sanction of an authorised person appointed by the Government. Such authorised persons would function from Friday morning. The Finance Minister, Mr Y. B. Chavan, announced that compensation would be paid for each month to all Indian companies at the rate of one-twelfth of the average annual profits distributed by them during 1967, 1968 and 1969 or at Rs 2.50 per Rs 1,000 of the net premium income written in 1969, whichever was higher. For foreign companies, only the second alternative would apply. On the basis of the latter formula, the compensation would amount to about Rs 28 lakhs per month during the period of take-over. A press note issued by the Finance Ministry stated that the present thinking was to set up four corporations competing with one another in general insurance all over the country. The ordinance does not apply to the general insurance business of the LIC and of the State Governments.

President's rule was imposed on May 13 for the first time in Gujarat, following the breakdown of constitutional machinery. Earlier, the State Governor, Mr Shriman Narayan, had reported to the Union Government that the Hitendra Desai Ministry had lost its majority owing to fresh defections and that the Congress (R) was not in a position to form a stable Government. (See also *Survey*.)

A major step to solve the Western currency crisis was taken when the West German Cabinet decided on May 9 to "float" the mark on foreign exchange markets. This step was taken to stem the inflationary flow of American dollars into marks. The West German decision followed a 20-hour meeting of the Common Market Finance and Economic Ministers in Brussels at which the French representative dropped his country's opposition to temporary floating of European currencies as a means of stemming excessive capital inflows. But the West Germans failed in their attempt to organise "a concerted upward float" by all EEC currencies against the dollar.

The Dutch Government also decided to float the Dutch guilder. The Swiss franc was revalued by 7 per cent and the Austrian shilling by 5.05 per cent. The Belgian Prime Minister, however, announced that the Belgian franc would no longer be handled on the official market but solely on the free market. Belgium is the only EEC country which operates on a two-tier system. (See also editorial and Report the World.)

In view of the unsettled situation in the European currency market commercial banks in India are doing large transactions

in West European currencies on a provisional basis at the rates prevalent before West German mark was floated on May 9. This is being done presumably to prevent disruption of the flow of foreign trade. The transactions are subject to subsequent adjustments in exchange rates as may be decided upon by the Foreign Exchange Dealers' Association, Bombay.

The President, Mr V. V. Giri, promulgated on May 7 the Maintenance of Internal Security Ordinance empowering the Central and State Governments to detain, without trial, any person (including a foreigner) with a view to preventing him from acting in a manner prejudicial to the defence of India, the relations of India with foreign powers, or the security of India. A person can also be detained for the purpose of maintaining public order, essential services and supplies. The Ordinance extends to the whole of India, excluding Jammu and Kashmir. No detention order made under the Ordinance shall be invalid or inoperative merely because the person to be detained under it is outside the limits or jurisdiction of the Government or officer making the detention order. The maximum period for which any person can be detained is 12 months provided that a fresh detention order against him may be issued on the expiry of the initial period of detention. No suit or other legal proceedings shall lie against the Central or State Governments, and no suit or prosecution or other legal proceedings shall lie against any person for anything done in good faith in pursuance of the Ordinance.

The Minister for Planning, Mr C. Subramaniam, said in New Delhi on May 11 that all the functions assigned to the Planning Ministry in the recent Presidential notification would be restored to the Planning Commission and an amendment to the Presidential notification to this effect was being issued.

The Union Government has decided to dispense with the "banned list" of industries altogether. The list indicated the industries (159) in respect of which applications for licences were ordinarily rejected without reference to the Licensing Committee.

The Company Law Board (CLB) decided on May 10 that any move to change the board of directors of the National Rayon Corporation will have no effect unless it is approved by the Board. The decision will be in force till the end of 1971. In an order passed on the petitions filed by the Chinai group the CLB has also decided to issue show cause notices to all parties why Government nominees should not be appointed on National Rayon's board of directors. The CLB, however, rejected the Chinai group's application to freeze the voting right of the Kapadia group. (See also Market Gossip.)

The Kerala Government promulgated an Ordinance on May 10 nationalising nearly 1200 sq miles of private forest in the Malabar area of the State. No compensation will be paid to the owners of private forests because, as claimed by the State Government, this is being done as part of the State's agrarian reforms programme.

Money steady

Conditions in the Bombay short-term money market were steady as of Wednesday. Demand for funds was maintained but supply of credits was short of requirements and there were borrowers over at the close. In the inter-bank call section, both renewals and fresh money were reported at 6 per cent. In the Calcutta market the rate ruled at 5½ per cent.

Price index down

During the week ended April 24, 1971, the Index Number of Wholesale Prices recorded a fall of 0.8 per cent to 181.5. At this level, the index was only 2.9 per cent above its level a year ago.

PEOPLE

MR K. N. MODI has been unanimously elected President of the All-India Manufacturers' Organisation.

Mr M. Mathias of Hindustan Lever has been elected President of the All-India Food Preservers' Association.

Mr Parks Chrestman has been appointed Managing Director of Goodyear India.

50 years ago

In November last we reviewed in these columns the report of the Stores Purchase Committee, presided over by Sir Francis Couchman. The appointment of the committee was a natural sequel to the adoption by the Government of India of a policy of encouraging indigenous industries. The enquiry was naturally chiefly directed to the question of the supply of stores of all sorts for government departments, railways and quasi-public bodies. The committee held that the Government of India "have not been generally successful in the efforts made by them from time to time to procure relaxations of the stores rules in respect of the encouragement of local industries and of the local purchase of imported stores", and the committee recommended that "the Secretary of State should delegate to the Government of India full control over the de-

tails of the stores rules. Complete freedom should be granted to India in this matter and it should be accepted as a policy, that all stores required for the public service shall be obtained in India whenever they are procurable in the local market of suitable quality and reasonable price, preference being given to articles of Indian origin." It is the principle that is of first rate importance, but the method by which it is to be carried into practice is likely to lead to conflict—not only of opinions but, may be, of vested interests. The policy of the Government of India, as enunciated, in the two letters just issued to the provincial administrations, is to make purchases of stores for public services in such a way as to encourage the industries of this country so far as is consistent with economy and efficiency.

The mounting burden of relief camps

NEW DELHI.

INDIA may be helpless in preventing atrocities and cold-blooded murder perpetrated on the people of Bangla Desh by the Pakistani armed forces. But she cannot lack either humanity or even scarce resources to look after the thousands of evacuees who have been forced to leave their hearth and home. In looking after them at the improvised receiving centres, India has merely done her duty as a civilised society. It is some comfort to learn from the team representing the United Nations High Commission for Refugees that India has "taken care of the refugees well". The conscience of the world has been slow in stirring, but not of the Indian people. There has been country-wide and spontaneous expression of sympathy. This sympathy has been backed by voluntary effort to provide hope and succour to the evacuees. The Union Government has extended all assistance to the border States to open reception centres and relief camps. The immediate requirements of foodgrains, accommodation and medicine have been met, whatever their cost to the exchequer.

Obviously, the military regime in Pakistan would seek to ensure that the evacuees whom it has been succeeded in hounding out from their homes, are a good riddance for all time. Equally obviously, it must be India's wish and effort that they go back where they belong. If it survives in its present form, the Pakistani military regime will require tremendous pressure and persuasion to let the evacuees return. For a bulk of the vocal and organised elements which would have opposed military oppression and colonial exploitation by West Pakistan have been done to death. Others have been made to flee the country out of fear of death. The minorities—tribals, Hindus, Buddhists and Christians—have also been singled out for the military pogroms which lead to their being squeezed out of East Pakistan. It is only by keeping the evacuees out of East Bengal that the military regime can succeed immediately in cowing down the rest of the population into submission and over the long haul in tilting the political and population balance. Whether or not this well-laid design to serve the imperialist interests of the ruling minority in Pakistan succeeds will depend considerably on the attitude towards the fate of the evacuees taken by the world powers. Their fate is linked with the future of the military clique in Pakistan.

In the meantime, the burdens imposed on India by the evacuees are there for all to see. The Prime Minister has spoken of how they will "eventually affect this country and its economy". Whatever the eventual effects and arrangements, the immediate impact cannot but be staggering. Already the prices of essential supplies in areas bordering the 1,400-mile international frontier have been looking up. There is acute shortage of accommodation. Lest disease and epidemic should spread, medical relief needs to be organised effectively.

It is a vain hope that two million and more people can be cribbed and confined within relief camps for the next six months and more. Unless early steps are taken to organise work, the relief centres must become the devil's workshop whose uneasy calm should deceive no one. Even if no political activities are allowed, it is unlikely that the evacuees will remain politically unexploited. Among those murdered in West Bengal during the past few months, there is a predominance of the people who have received their political baptism while seeking to survive as refugees from East Bengal. Government must invite more crime and political unrest as the number of evacuees goes up and the period of their enforced exile lengthens.

Even the short-term burden on the Indian economy will be heavy. The first requirement is to ask, against the background of falling prices in some pockets, the Food Corporation of India to raise its

procurement targets and storage capacities. Even if the tide of evacuees is stemmed in the near future, the present burdens on the exchequer could be no lower than Rs 200 crores during 1971-72. Unless there is substantial and immediate assistance from the community of the United Nations, the burden on the country's finances, law and order and communications will make nonsense of every serious effort at stepping up the pace of economic progress. There could be no doubt that this is what Pakistan and China would wish and work for—to cripple the country's economy even as it is poised for another agricultural and industrial upsurge. Simultaneously, steps are under way to bale Pakistan out of its economic crisis by ensuring a massive flow of aid to follow devaluation of the Pakistan rupee. It would be callous of India to leave the evacuees to their own devices until internationally organised aid comes in. But it would in no case be cynical to think that unless India has the courage and farsightedness to protect her interests, Pakistan will get all aid and India keep the evacuees as a running sore. □

GUJARAT

Confrontation over gas prices

AHMEDABAD.

THE fact that the Gujarat Government has asked the Gujarat Electricity Board and the Gujarat State Fertilizers Company not to pay to the Oil and Natural Gas Commission the outrageously high price now fixed by the Commission for natural and associated gas, and the momentum the demand for placing restrictions on the operations of the Commission in Gujarat has gathered, are indicative of the intensity of the resentment against the unilateral decision of the Commission to raise the price by as much as 125 per cent with effect from April 1.

The Commission announced that it would charge Rs 106 per 1,000 cubic metres of natural and associated gas on the expiry of the V. K. R. V. Rao award on March 31. The Rao award does not envisage any upward revision of the price. It is also not disclosed what formula is to be applied to work out the well-head price of gas. The Commission has apparently failed to supply the necessary data even to the State Government and a committee of experts appointed by it. What has provided a sharp edge to the controversy is the refusal of the Commission to consult even the State Government, let alone the consumers, before announcing the price hike. The Commission has already charged as high as Rs 125 per 1,000 cubic metres to one of the textile units in Ahmedabad and attempted to push through a price of Rs 135 per 1,000 cubic metres in the Kalol area. The principle of differential rates for supply of gas from unit to unit, quietly implemented through bilateral negotiations, has also irked the State Government and business organisations.

The conflict could have been softened if the Commission had not behaved as

brusquely as a monopoly supplier of a commodity often does. The Commission knew from past experience that the issue was potentially explosive and also that the relations between the Centre and Gujarat were not exactly cordial. Shorn of emotional and political overtones the issue is certainly not such as to defy solution.

Gujarat has argued that, just as in the case of other areas having natural resources such as coal and hydel power which enjoy the benefit of low cost energy, Gujarat should also be allowed to have the benefit of its natural resources of oil and gas so that its high cost of fuel can be brought down. Gujarat has also argued that since there is no uniform national price for other energy resources like coal there is no reason why the Centre should enforce uniformity in petroleum prices, particularly in prices of by-products like residual fuel oil and natural and associated gas, which have to be used locally. It has also been pointed out that if gas is sold at Rs 9 per 1,000 cubic metres in Assam there is no reason why the Commission should charge as high a price as Rs 106 for this by-product in Gujarat.

If Gujarat offers to consume this gas, which is otherwise flared, should that be a reason to fleece the State? Dr V. K. R. V. Rao, who had five years ago gone into the issue as an arbitrator, himself had said that Gujarat has a valid point in urging that the advantages that accrue to the coal-bearing States by way of low cost in fuel and in power generation should, side by side, apply to Gujarat because of the discovery of gas in its area and its projected use in power generation.

The question which seems to agitate Gujarat is: why should it be singled out for a discriminating treatment even where

it can draw legitimate benefits? On the other hand, it is obviously difficult to estimate correctly the well-head cost of gas, which emerges from soil along with oil and is separated and flared or used either as feed-stock in fertilisers or petrochemicals or as fuel.

The issue could have been settled long back had the Central Government not attempted to recover the cost of exploration from the Commission. The Commission was originally supposed not only to carry out costly explorations but

also to ensure development of petroleum resources and the production and sale of petroleum and petroleum products produced by it. The objective was to cushion high costs of exploration and to set off losses by entrusting the work of refining and marketing to ONGC. But the latter two functions have now been taken away from the Commission, which is still expected to be a profit-making concern. Driven to this position, the Commission is tempted to fleece consumers of gas and pass on the burden to

Gujarat. It simply cannot effect a substantial price hike for its crude oil supplied to refineries.

The State Government is no less responsible for neglecting the entire issue. It is known to have remained passive while the Commission went on bargaining with individual units. The administration was obviously caught napping. The Government, however, has made a sensible demand and wants the whole issue to be examined *de novo* and settled through arbitration. □

IN his address to Parliament, the President recently outlined a package programme for quickening the pace of industrial growth. Obviously a faster rate of growth is the only dependable method of increasing employment and improving the living standards. Any steps taken in this direction would be watched with serious interest. Mr Giri emphasised the need for sound industrial relations and for extending the new technology in agriculture so that the necessary climate and sinews of industrial growth get established.

The Government was alive, Mr Giri suggested, to the obstacles which hamper the speedy implementation of investment programmes and slow down the rate of industrial production. These obstacles, it was promised, would be removed by deploying special task forces. The importance of a well-equipped managerial cadre for public and private sectors was admitted. Wherever the administration delayed the taking of decisions, concentrated too many powers and responsibilities at remote points and was bogged down by financial procedures, the faults in its functioning will be located. Consequential changes in the administrative structure were also deemed desirable. It would be the responsibility of labour and management as well as of the civil service that the steps indicated in the President's address to the joint session of Parliament are actually taken. What these steps are would be indicated by the task forces.

Urgent as the task of stepping up investment is, it is unlikely that the assignments for the task forces have yet been worked out in respect of ministries or industries. The Government does not have to look for them at too many places—last year's performance of the economy in India has thrown up enough warnings and pointers. Oddly enough, after forty years of planning, the Soviet Union is also plagued with almost the same industrial slippages and economic failures. For administrators otherwise short of ideas, the report by Mr Kosygin, as Chairman of the Council of Ministers in the Soviet Union, on the directives concerning the Five-Year Economic Development Plan of USSR for 1971-75 comes closest towards providing the guidelines for the task forces. Mr Kosygin has referred to the need for "concentration of capital investments and reduction of the number of enterprises..."

In her talk to Secretaries, the Prime Minister also had emphasised the need for greater co-operation among ministries which are used to taking a depart-

mental and, therefore, a negative approach. Mr Kosygin opposed this State-within-the-State attitude more forcefully: "The need has arisen to improve inter-branch planning, the significance of which continues to grow due to the necessity of resolving many major economic problems involving several branches of the economy.... We cannot but note that some ministries are still making poor use of the new methods of managing production. All too often the rights of enterprises operating on a profit-and-loss basis are impinged upon, while economic methods are being superseded by administrative ones... Fulfilling plans which co-ordinate the work of different enterprises and branches of production, as well as the long-term prospects of their development, requires a general tightening of State discipline. It is essential to increase the responsibility of each ministry, amalgamation, enterprise and workers' collective for timely fulfilment of all plan assignments." So might the new Planning Minister. Mr C. Subramaniam, address his colleagues in the Union Cabinet.

In its stress on growth with stability the Fourth Plan seeks to redress the imbalances which had emerged on the eve of the Fourth Plan and which are threatening once again to hold up industrial advance along all fronts. As the material balances get out of gear, the fulfilment of the Plan as an inter-related operation is endangered. On this aspect of the responsibility of the planning organisations and industrial plants, Mr Kosygin says that "they must take timely measures to prevent the appearance of disproportions and ensure the precise fulfilment of the plans and the fullest possible utilisation of internal potentialities.... As an example of poor organisation work by ministries, especially the engineering ministries, we could cite the situation with spare parts for machines and equipment. This is felt most acutely in agriculture. Interruptions in the supply of spare parts do considerable harm, causing stoppages and compelling a large number of people to engage in semi-artisan production which adds greatly to the cost of equipment overhaul". As the Indian experience has proved, these imbalances have laid up machinery worth crores of rupees at our major irrigation projects and delay-

ed the work on power generation, fertiliser production and steel making.

The immediate question, therefore, is how the task forces should go about their business of locating bottlenecks and trouble-shooting. Much will depend on how the task forces are constituted. In an administration unable to look beyond its nose, there is every danger that the task forces might become synonymous with job creation by the administrators for the administrators. Does the Government realise that the imbalances in the economy and the non-fulfilment of targets in the core sector are in part the result of existing procedures and the responsibility of the men now at the helm, including ministers? It will be defeating the very purpose of the task forces if these are the only people asked to suggest remedial steps. What is needed is an objective and quick study of what has gone wrong, and where, and why. In the implementation of industrial programmes, the country faces in a big way a technical and managerial challenge. The task forces must, therefore, have a strong leavening of independent expertise if they are not to come up with the same old nostrums and alibis.

Having located the faults and failings and suggested remedial measures which must cut across departmental susceptibilities, the task forces must also enforce a reporting system which makes, for effective and continuing appraisal of the projects in physical and financial terms. There will be considerable pressure, in view of the shortfall of about Rs 200 crores in the outlay on the 1970-71 Plan programmes, for keeping investment low during 1971-72. This will also be politically welcome in the second election year for the respite it will offer in the budgetary and taxation terms. To take this view, however, will be highly shortsighted, since this is the surest way of extending the current stagnation in the core sector, bulk of which lies in the public sector. For a long-term, objective and expert view to bear on stagnation in investment and slippages in industrial growth, the task forces have a crucial role. Political expediency and a bureaucratic tendency to play safe by keeping the experts out should not be allowed to stultify sensible thinking on the organisation of the task forces. □

Task forces—Soviet and Indian

By A Special Correspondent

REPORT

THE WORLD

From Our Own Correspondents

THE WESTERN CURRENCY CRISIS

WEST GERMANY again became the centre of the currency crisis in the industrialised world when nearly one billion dollars moved into that country in less than an hour on May 5. This was the culmination of a massive run from dollars into marks which gathered momentum last year. The gigantic US balance of payments deficits year after year have eroded the Western financial world's confidence in the dollar which has ceased to be "as good as gold". The dollar crisis has also brought to the fore the irrelevance of the IMF in a major currency crisis. While the US remained nonchalant towards the dollar crisis, the West Germans were forced to float the mark. Switzerland and Austria

have revalued their currencies to forestall the pressure of hot funds on their currencies. The current currency crisis, which has been as widespread as the May 1969 crisis which eventually led to the revaluation of the mark by 9.3 per cent in October of that year, has shaken the foundations of the Common Market. Its farm policy has suffered a setback and the first step towards the proposed monetary union of the Common Market countries may not be taken as scheduled in June next. The following are reports from *Commerce* correspondents in Brussels, Bonn, Paris, Washington, Tokyo and Singapore on the impact of the dollar crisis on their respective financial areas.

EEC

Setback for farm policy

BRUSSELS.

THE European Common Market is the first victim of what has been variously described as the dollar-Deutsche mark or currency crisis. To be workable at all, the common agricultural policy, the Six's main achievement to date, requires fixed exchange rates between the currencies of the member States and the EEC's unit of account which is equivalent to the gold parity of the US dollar. Moreover, their ambitious plan for monetary union calls for the elimination of fluctuations between the Common Market currencies and only a fortnight ago the Six fixed June 15 as the target date for the first move towards reducing the permitted margins of fluctuation.

Floating exchange rates clearly are a threat both to the Community's agricultural policy and its plans for monetary union. Not surprisingly therefore Sunday's (May 9) decision by the Six Finance Ministers to allow the member States to float their currencies, if they feel such a step is necessary in order to halt the flow of hot money, has been widely interpreted here as a sharp setback for the EEC.

Its supporters nevertheless hope that the damage to the Community will be limited and therefore quickly repaired. They point out that the Six confounded the sceptics by adopting a Community solution to what some regarded as a German problem. But it is too soon to say whether the four-point programme drawn up by the Finance Ministers and the European Commission after 17 hours of non-stop negotiations represents a genuine compromise and not an agreement to discharge.

The problem facing the Six was how to reconcile the German and French views as to the nature of the crisis and the measures to be taken to meet it. The French maintained that the heavy influx of funds into Germany reflected the weakness of the American dollar. It was therefore up to the US to act. By revaluing their own currencies the Europeans would simply be playing into American hands.

The Germans were more concerned with the effects of the speculative move-

ments on their own economy than with apportioning blame for the continued inflow of funds which has made it even more difficult for them to control inflation. The imposition of exchange controls, as advocated by France and the Brussels Commission, was unacceptable to the German economics Minister, Prof Karl Schiller, whose socialism seems indistinguishable from the laissez-faire policies of his predecessor, Mr Erhard Epler. He took the view that speculation against the mark could be ended only by allowing it to float freely and for as long as necessary.

At first sight, Sunday's decision reconciles these two conflicting viewpoints. It clearly stipulates that there will be no official parity changes. Hence neither the mark nor any other EEC currency will be revalued. On the contrary, the Ministers will draft measures aimed at discouraging the excessive influx of short-term funds into the Community. The Commission had earlier proposed a number of measures including controls on capital movements between the EEC and non-member countries and a negative interest rate on bank deposits belonging to those resident outside the EEC, and the Finance Ministers in fact examined several of them during their marathon session.

But while recognising the incompatibility in normal circumstances between a system of floating exchange rates and the smooth operation of the EEC, the Ministers nevertheless expressed the view that member countries facing an excessive influx of capital could enlarge, for a limited period, the margin of fluctuations of the exchange rates of their currencies in relation to their existing parities.

This circumlocution, taken in conjunction with the decision to maintain official parities unchanged, would suggest that the Finance Ministers' decision does not authorise West Germany or any other EEC country to float its currency freely. Rather it provides for a widening of the permitted margins of fluctuation around parity which is a very different thing from a system of freely floating exchange rates.

The distinction is far from being purely academic. As the Germans obviously cannot float the mark indefinitely, both their

Common Market partners and the speculators are vitally interested in knowing what its parity will be, once the period of floatation is over. The terms of the compromise suggest that the mark presumably will return to its old parity. In fact, it can be argued that, as long as the floating amounts to no more than a widening of the margin of fluctuation by a limited amount, the parity of the mark would remain unchanged.

The French, of course, believe that the speculative fever will not disappear until the American balance of payments position is in equilibrium and the excess liquidity of recent years has been mopped up. Be that as it may, the speculators can be expected to shift their attention from the mark to other currencies. It was in order to forestall them that the Dutch decided to float their currency and the Swiss and Austrians to revalue theirs. Speculation against the Italian and French currencies and even sterling appears unlikely while the stronger Belgian franc is protected by the two-market system in force in Belgium.

This leaves the Japanese yen thoroughly exposed. It is perhaps significant that an official from the Japanese Embassy here was present in the journalists lobby during the entire ministerial session. He gave it as his personal opinion that Tokyo will ease restrictions on imports and capital movements rather than revalue the yen.

WEST GERMANY

An attempt to cure cancer with aspirin

BONN.

THE currency crisis looked at from Bonn gives a different picture. Here the panic was not due to currency speculation, but because of the inflation which is the worst since the war. Internal factors apart, the inflationary pressures were aggravated by other developments. The Bundesbank had to purchase US dollars worth DM 70 billion last week. Faced with such a situation, the Bonn Cabinet favoured Prof Schiller's proposal to float the mark in spite of stiff opposition from commercial banks and the majority of the

CURRENCY CRISIS: Commerce Correspondents report from Brussels, Bonn, Paris, Washington, Tokyo and Singapore.

Board of Bundesbank, who recommended exchange controls and restrictions on foreign borrowings.

The mark is now at its highest value since 1949, causing a devaluation of the dollar by 3 per cent. Prof Schiller stated at a special session of the Bundestag that the old parity between the mark and the dollar would be restored soon. However, according to observers, it would take months before a fixed parity was announced. Moreover, Bonn has declared full compensation to the German agriculturists, the main victims of the present crisis. This indicates that the German Government is preparing for a longer period of floating.

The developments of the past week have shown that among the partners of the European Economic Community, national interests prevail over those of the Community. While the Germans went to Brussels to seek an "European solution" to the crisis, nobody else considered it as an European problem and the Germans found themselves alone on the issue.

A Bonn Minister said that the Americans have pushed so much of their paper money into West Germany that if the Germans wanted they could buy the last gram of gold stored in Fort Knox. However, even with the tight monetary measures adopted by Bonn, the crisis is not cured. The root cause is the Euro-dollars. Unless the US herself takes decisive steps towards a solution, another crisis is sure to come. The Germans are aware of this and an opposition leader said that the present monetary measures are an attempt to "cure cancer with aspirin".

FRANCE

"Bonn playing Washington's game"

PARIS.

THE recent currency crisis and the German decision to float the mark over fierce French opposition have shaken the unity of the European Common Market. Pressure on the US will now increase for curbing its payments deficit which has been the root cause of the crisis, although it is unlikely to be remedied in the immediate future. And hence the French accusations that Bonn is playing the United States' game. But in the long term the arrangement demonstrates the absurdity of permitting American domestic politics to dictate European currency markets. Hence it is believed here that the recent events might ultimately speed the EEC's monetary union.

There will also be increased pressure for control of the 50-billion Euro-dollar market as it has now become clear that central banks are incapable to stem the hot-money flows. Experts expect flexibility in the uncontrolled Euro-dollar market but the EEC Governmental objections might over rule this. It is also feared that speculators might turn elsewhere now. For instance, Tokyo could be under increasing pressure to promote yen outflows in preference to a revaluation.

Sterling was basically unaffected during the crisis and it is likely that small

gains might accrue to Britain from Dutch, Austrian and Swiss revaluations and the floating of the German mark. This might postpone the sterling crisis widely anticipated during the next two years.

UNITED STATES

Uncle Sam couldn't care less

WASHINGTON.

WHETHER the Europeans like it or not, the US can afford to treat monetary crisis with some equanimity if not "benign neglect" since it is much less dependent on foreign trade than others. American exports at \$42 billion last year were way ahead of those of any other major exporting country, but they constituted only 4 per cent of the US GNP. Even if the export of services was added they would work out to 6.3 per cent. The US attitude, therefore, is to treat currency crisis of the kind that occurred last week as transitory flare-ups in the international monetary situation.

Nevertheless, if the US does not take steps to reduce its huge balance of payments deficit, there will be stronger reactions against the dollar in future. These could raise new barriers to the movement of capital and goods and thereby bring about a shrinkage of trade on which world prosperity depends. One suggestion to prevent this happening was the institution of some form of capital controls to dampen the flow of dollars to Europe. This, however, was rejected by Nixon Administration officials. Treasury Secretary, Mr John V. Connolly, asserted that no change in the present structure of exchange parities was necessary, but he said the US was prepared to raise additional funds in the "Euro-dollar" market through the issue of Treasury security and to assist with appropriate investment outlets for foreign central banks.

JAPAN

No revaluation, no floating, no speculation

TOKYO.

WITHIN hours of Bonn's decision to float the German mark, Tokyo announced that it was doing nothing of the sort and was holding firmly to the 360-yens-to-a-dollar parity. The Japanese Finance Minister, Mr Takeo Fukuda, said: "No revaluation, no floating and absolutely no speculation." Mr Fukuda also promised strict regulatory measures on the exchange market to curb speculation. Immediately the Government machinery went into action to reinforce Japan's solid wall of protection for yen.

Almost everyone in the Japanese Finance Ministry and the Bank of Japan recognises the possibility of international pressure mounting on the yen for an upward revaluation. And revaluing the yen would only mean costlier exports. For Japan, the removal of exchange control is also definitely out of the question. The only concession Tokyo is willing to give is to bring orderliness in

her exports and increase imports through selective liberalisation. Other measures proposed to reduce the Japanese foreign exchange reserves are stepping up foreign aid and liberalising overseas investment.

Japan has been quietly acquiring gold to reduce the dollar content of her foreign exchange reserves. How much she would be able to move away from the dollar to gold depends also on how effectively she could diversify her exports which provide a major portion of her GNP. The recent currency crisis, the floating of the German mark and the upward revaluation of some European currencies have increased the Japanese competitiveness in world exports. Japan is not willing to give up this advantage by revaluing the yen. This advantage, the Japanese Government wants to defend to all costs—a step in this direction was taken by cutting the Bank rate from 5.75 to 5.5 per cent on May 7. However, despite all these, the Japanese Government is aware of the inevitability of an upward revaluation of the yen at the most in about two years' time, if not now.

S. E. ASIA

A European headache

SINGAPORE.

THE latest currency crisis caused no more than a ripple in the South-East Asian region, partly due to repeated American assurances that the dollar would not be devalued and partly due to the relatively short duration of the emergency. In Singapore and Malaysia banks suspended dealing in the German mark on Thursday, May 6, but continued dealings in other currencies including the US dollar. Thailand suspended dealings in all European currencies but continued dealing in American dollar which remained firm throughout last week. The first sign of the monetary crisis was an increase in the price of gold in all the countries following price increases in the London market.

Expectations in Malaysia that prices of tin and rubber might benefit, if the crisis was left unresolved for a while, have been proved too optimistic because of the week-end agreement reached by EEC Finance Ministers to let the German mark float for a limited period. In Thailand, whose exports to European countries are paid off in American dollars, fears were expressed that a prolonged boycott of the dollar by the European banks might have an adverse effect on her exports. The Philippines also weathered the storm without any apparent ill-effects.

As a matter of fact unlike the 1969 dollar crisis which led to the revaluation of the mark, the present crisis was considered here as mainly a "European headache". But financial circles are clearly concerned about similar possible onslaught by currency speculators on the Japanese yen described as Asia's under-valued mark. Japanese authorities seem confident that their strict exchange controls can defeat any such move but any massive movement of speculative money towards Tokyo will leave a destructive trail in South-East Asian capitals. □

Bangla Desh and Pakistani-Soviet relations

By Dev Murarka

Moscow.

THE butchery indulged in by General Yahya Khan's armed hordes in East Bengal has had a traumatic effect on Soviet-Pakistani relations. It has removed any illusions which Moscow might have still entertained about Yahya Khan and his *bona fides*. The Russians already knew from experience that he could not be taken at his word. What they did not realise fully was his insatiable hunger for power which made him go to the length of a genocidal campaign against East Bengali nationalists. Till the last moment he kept Moscow lulled with the fairy-tale of his good intentions and earnest desire for a settlement of the political crisis in Pakistan on democratic lines. When the extent of his perfidy became known, Moscow did not take long to wake up to the fact that it had been once again taken for a ride by a Pakistani. It was even more concerned that the action of Yahya Khan threatened the whole basis on which Soviet policy in South Asia had been conducted since the Tashkent Declaration of January 1966.

It says something for the current state of Soviet-Pakistani relations that a cabinet rank special envoy of the West Pakistani President, Mr Arshad Hussain, was kept cooling his heels in Moscow for a week before he could be granted a fruitless meeting with the Soviet Prime Minister. Mr Arshad Hussain arrived in Moscow on April 19 and was received by Mr Kosygin only on April 26. As all the foreign dignitaries who have met Mr Kosygin have testified, he is a firm, grave but extremely courteous man. But from accounts of his meeting with Mr Arshad Hussain available here, even his patience was well-nigh exhausted by the record which the West Pakistani had brought with him to play. There were three movements to the sickening symphony he presented.

First the basic theme was stated—it was all the fault of India. The second subject in this expository part was also the leitmotif that India had exaggerated the tragic state of affairs in East Bengal. The second movement consisted of the dramatic theme that Yahya Khan had been very gentle in East Bengal and employed only the minimum force necessary. But for India even this might not have been necessary. The last movement begged for Soviet assistance to enable Pakistan to cope with the alleged damage done by India. There was also a special coda to this movement—some kind of plan which Yahya is supposed to have formulated to find a solution on a peaceful basis.

Mr Kosygin simply brushed aside the charge of Indian interference. He testily asked the West Pakistani envoy whether the presence of more than a half million refugees from East Bengal on the Indian soil was also the fault of India? He pointed out that only a great disaster could persuade people to leave their homes and seek shelter in another country. As for Indian exaggerations, he wanted to know if the Indian capacity to influence the world

press was so great that its accounts pointed to even worse conclusions than those emanating from India. Mr Arshad Hussain was speechless. As for the cheeky request for Soviet aid, Mr Kosygin firmly stated that his Government had repeatedly appealed to Yahya Khan for restraint, but these appeals had not brought any positive response. Under these circumstances the Soviet Union could not take unilateral decision about aid. It was an extremely dusty answer. The only point on which no information is available is the alleged plan sent by Yahya Khan. Naturally, Moscow would not like to spoil even a fractional chance of a settlement, but its reticence on this may also be due to its extreme scepticism. And if it is true that part of the plan by Yahya Khan implies direct Soviet help in solving the political crisis by negotiation, Moscow will be extremely chary of burning its fingers once again on account of a person who has proved to be extremely unreliable so far. Yahya Khan's request also implies a complete abdication of responsibility on a matter which Pakistani propaganda has tirelessly maintained to be an internal affair of Pakistan.

Indeed, even in Moscow the stink of Punjabi chauvinism, characteristic of West Pakistani politics, has been directly felt. Diplomatic circles have not failed to note that since the hostilities began between Bangla Desh and West Pakistan, the Pakistani Ambassador here is always accompanied by a Punjabi underling during important meetings. It so happens that the West Pakistani Ambassador to Moscow is a gentle, charming and highly intelligent Parsee. Therefore, the authorities in Islamabad no longer seem to completely trust him and find it necessary to have him flanked by a Punjabi colleague who can be no doubt wholeheartedly relied upon to advocate the Punjabi case and present the Punjabi apologia and keep a watch on him. For instance, Mr Jamsheed Marker, the Ambassador, was accompanied by Mr Bukhari, the Minister, when he met Mr Kosygin on April 12. Mr Bukhari also accompanied Mr Arshad Hussain and Mr Marker to the meeting with Mr Kosygin on April 26. Normally, when a cabinet minister meets the Prime Minister here, he is accompanied by the resident Ambassador only, plus perhaps a very junior member of the staff as secretary whose name is not included in the communique.

Soviet policy makers are, of course, not so much concerned about these national nuances of Pakistan's present behaviour. Their interest lies in the viability of the country and the policies it pursues. Thanks to the combined efforts of Yahya Khan and Zulfikar Ali Bhutto, Pakistan as we have known it is dead. In political terms it also signifies that for a long time to come it will remain an unstable, weak country. That this has coincided with the triumphant resurgence of India in terms of stability and political effectiveness means that Pakistan can be neither relied upon to counterbalance India, nor to free herself from the embrace of Peking. Thus the

long-term aim of Soviet policy, which is to prevail upon Pakistan to come to terms with India and strengthen the South Asian region as a bulwark against Chinese penetration, has been frustrated.

West Pakistan is now likely, more than ever, to be beholden to Peking which is already making war-like noises against India. Since the Soviet Union has no desire to compete at all in this anti-Indian game, the influence which Moscow can exert upon Islamabad can only diminish. Besides, Moscow is also convinced that Bangla Desh has come to stay. At present the assessment here is that at least a couple of years of a bloody and exhausting struggle lies in front of the freedom fighters of East Bengal. Being great realists, Soviet policy makers have been aware from the very beginning that the infinitely superior fire-power of Yahya's invading army and the comparatively disorganised and unprepared state of the freedom fighters held out little chance of immediate victory for Bangla Desh. But even their initial scepticism has given way to perhaps reluctant admiration for the tough spirit of resistance shown by the East Bengalis. It is obvious to Moscow that this spirit will transform itself into a fierce and prolonged guerilla warfare which will make it impossible for Islamabad to keep a hold over the major part of Bangla Desh, which will be ruinously expensive for West Pakistan and which will ultimately arouse public opinion in West Pakistan itself against the prolongation of the war and for acceptance of the inevitable—the independence of Bangla Desh. The only pity is that Bangla Desh had to become the Vietnam of South Asia before this could happen.

It is only fair to add that Moscow's conversion to the cause of Bangla Desh is fairly recent. Till not so long ago, the Soviet policy makers set great store by a United Pakistan and it was partly in pursuance of this aim that they allowed themselves to be fooled, first by Ayub Khan and then by Yahya Khan. But the election results in Pakistan were an eye-opener for them. They not only provided the most convincing proof of the utter loathing of the East Bengalis for their Punjabi masters and satraps, but also revealed the wave of chauvinism on which Bhutto was riding with his slogans of socialism, Maoism and Islam. Though a little suspicious of the simple nationalism of Sheikh Mujibur Rahman and even worried lest he should be too pro-American, gradually Moscow came to the conclusion that it would be better to win over the sympathies of East Bengal with its moderate and sensible approach to problems, especially its strong desire to live in peace and amity with India. The Russians were disturbed at the prospect of a volatile, bitterly anti-Indian Bhutto ruling over the destiny of Pakistan. Indeed, throughout the post-Ayub period of Pakistani politics, they had come to dislike Bhutto more and more and, according to their information, it is Bhutto, more than anybody else in Pakistan, who is responsible for the tragedy which has befallen that unfortunate land. But for Bhutto, a united, federal Pakistan might have still emerged peacefully under the leadership of Mujibur Rahman.

to stop the bloodshed and repression is that it signals a change from the policy of blindly wooing Pakistan and making a belated but noble gesture towards Mujibur Rahman. Its bitter and blunt tone also reflected a slight sense of guilt since the Russians had been urging restraint upon Yahya Khan as well as upon Mujibur Rahman and had perhaps fallen into the trap of Yahya by conveying some of his false assurances to Mujibur. Therefore, Podgorny went out of his way to recognise Mujibur as the acknowledged leader of the East Bengali people.

Since then the Soviet press has maintained a very balanced approach. As Moscow does not want to burn all bridges with Islamabad, it has reported the official West Pakistani news about developments in Bangla Desh. But such reports have been almost invariably accompanied by other items casting grave doubts upon the veracity of these reports. If the Soviet press has not been sharper in its tone, it is so because partly it does not want to offend Islamabad too much and partly it can only

gradually inform its own public about the change which has taken place in Pakistan. It is noteworthy, however, that its tone is a consistent one of opposing the black deeds of Yahya Khan and of sympathy with the oppressed people of Bangla Desh.

There can be no question that once Bangla Desh is firmly established with a capital in its own territory, Moscow will be one of the first to recognise it. For the time being, however, the Russians will pursue a cautious course since it is not their habit to take political risks by recognising a government which has no control over its own territory and where Pakistan still has an effective military presence. Thus while diplomatic niceties are scrupulously observed the real Soviet attitude is evident from the repeated references to Bangla Desh in Soviet news items and their insistence that Mujibur Rahman and his followers represent Bangla Desh.

Moreover, there are larger issues involved in the problem of Bangla Desh. First and foremost, there is India. Moscow has a very understanding comprehension

of India's sympathies, anxieties and fears on this matter. While strictly technically Moscow accepts the West Pakistani contention that it is an internal matter for Pakistan, it simultaneously and openly contends that it is also a matter which affects the whole region and that India cannot remain indifferent to the situation. Moscow is more inclined to believe the Indian contention that the suppression of Bangla Desh involves a risk of greater Indo-Pakistani conflict than the Pakistani noise about alleged Indian interference. It follows that any policy line adopted by Moscow during the present Pakistani crisis has to take into account Indian susceptibilities and has also to keep before it the objective of minimising the risk of such a confrontation. It is in pursuit of these aims, for instance, that the Soviet Union has offered to evacuate Indian diplomats from Dacca in the hope that at least one ugly situation can be avoided. Whether Pakistan accepts this offer or not will show to what extent Islamabad still cares for good relations with Moscow. For this very reason Podgorny's appeal as well as the latest commentary in *Pravda* have drawn attention to the risk of a greater conflict with a view to warning Pakistan that it should not go over the brink. The fact is that the Russians now set much store by the stability in India than ever before, which has been heightened by the prospect of continued instability in Pakistan.

In this context, it must be said that Mrs Gandhi's stature has considerably gone up in Russian eyes since the Pakistani crisis began. Undoubtedly respect for her went up by leaps and bounds as the results of her magnificent election victory came pouring in. But her handling of the Pakistani crisis—resolute, principled and extremely moderate—has won particular admiration and a silent applause. It is felt here that but for her astute handling of the surging emotions unleashed in India by the unprecedented brutality of the occupation forces in Bangla Desh, things might have already got out of control. Moscow now appears to be relying upon her enhanced stature within India to ensure that New Delhi will be able to deal with Pakistani provocations in a cool way, without giving in to either blandishments of the Peking-Islamabad axis or the temptation of replying in kind to its baser tactics. Mrs Gandhi's moral stature has been revealed to the Russians in even sharper relief by comparison with the tuppenny-happenny gunman which Yahya has proved to be.

Moscow shares with India the analysis that the West Pakistani leaders may deliberately embark upon a conflict with India in order to divert attention at home from tensions on the political front, massacres in Bangla Desh and the bankruptcy of the economy which stares Islamabad in the face. The war cries of Mr Bhutto have only increased Soviet apprehensions. But much more serious in the Soviet eyes is the enigmatic posture of China. Soviet analysts have not agreed with those who have suggested that Chou En-lai's message to Yahya Khan was only anti-Indian in its content. On the contrary, in bitter verbal discussions between Soviet diplomats and Chinese officials in Peking, the Chinese have denounced Mujibur in no uncertain terms, accused the Soviet Union of forging India as the king-pin of resistance to China and used highly abusive

tone to denounce Mrs Gandhi. The Chinese justified Yahya's butchery on the ground that it was essential to protect the territorial integrity of Pakistan and accused the Russians of being hostile to Pakistan. The Soviet diplomats denied all these charges and even asserted that they had nothing but goodwill towards Pakistan, but to no avail. The Chinese also told them that they will intervene in the case of any conflict between India and Pakistan in favour of Pakistan.

On the basis of this, the Russians have concluded that the risk of Chinese intervention cannot be lightly ruled out and if it takes place the conflict could become much larger. While they suspect that the Chinese may not go over the brink of verbal warfare, as during the last conflict between India and Pakistan, there cannot be any certainty about it. It is for this reason that a recent article in the weekly *New Times* spelled out the Soviet view of the Chinese role in South Asia. According to it, the major preoccupation of China has been and will remain encirclement of India. In the Soviet view, the Chinese interference in the internal politics of Pakistan is designed to maintain absolute political hold over Islamabad, relying upon her capacity to supply Pakistan with weapons and political stooges like Bhutto who share the Chinese obsession against India.

It is felt here, therefore, that an independent Bangla Desh, though weakening Pakistan, may also help to make West Pakistan useless for China's anti-Indian purposes. This is one more reason why the Soviet policy makers have come to favour an independent East Bengal, overriding their earlier view in favour of a united Pakistan at all costs.

It is obvious that such a sympathetic approach to Bangla Desh by Moscow will arouse Islamabad's antagonism towards the Soviet Union sooner or later. A closer link between Pakistan and China may be an immediate consequence. Another may be renewal of Pakistani-American ties. This is an equally serious matter for Moscow, with wider implications.

It has not escaped Moscow's attention that the British Government, as usual in all political situations on the Indian sub-continent since 1947, has adopted an utterly pro-West Pakistani attitude. Britain still has important links with Pakistan through two military pacts, the CENTO and the SEATO. By itself this may not mean much since London's capacity to help Pakistan materially is rather limited after all. However, if London acts in concert with Washington, it can make a lot of difference to the whole political equation in South Asia. After initial hesitation Washington seems to have come down in favour of steady and almost unqualified support for West Pakistan. This view can be supported not only by the repudiation of remarks made by the American Ambassador in India by the State Department in Washington, but also by the attendance of the Secretary of State, Mr William Rogers, at CENTO council meeting in Ankara very recently. It has been noted here that at this meeting the Pakistani representative made strident anti-Indian propaganda and neither the British nor the Americans even politely disagreed with it. Besides, according to Soviet commentators, Mr Rogers went to Ankara with the

specific purpose of reviving the CENTO military organisation.

Now for some time Pakistan has sought to create the impression in Moscow that it had lost all interest in military pacts. But its renewal of contacts with SEATO at its recent meeting in London, although only through an observer, and its full participation in CENTO through an ambassador, suggests to the Russians that Islamabad is again inclined to be active in these pacts, particularly CENTO. This will commit Washington to the military regime in Islamabad once again and even American-British weapons could be supplied conveniently through CENTO to West Pakistan in large quantities, increasing the capacity of Yahya Khan to bring even greater repression to bear upon the Bangla Desh fighters.

It is assumed here that Peking will approve of such a course for Pakistan, partly because it no longer considers America to be opposed to its interests in the region and is trying for a rapprochement on its own with Washington. Partly, also,

because it will relieve China of part of the burden of financing a bankrupt Pakistan and keeping her supplied with a large quantity of weapons. Washington has evidently reached the conclusion that this way it can achieve several aims: one, of restricting Soviet influence in South Asia; two, keeping India pinned down through the simultaneous pressure of Pakistan and China; three, regaining its lost foothold in West Pakistan and last, to please Peking at the same time.

Obviously, Moscow cannot view with favour such a development. And if Pakistan shows more signs of joining reactivated military groupings dominated by the Western powers and aimed either against the Soviet Union or India, relations between Moscow and Islamabad are likely to worsen even more. But for the time being the Soviet Union will keep its options open and go on encouraging Yahya Khan to return to sanity. Even if this comes about it will take a long time for Soviet-Pakistani relations to return to normal. □

BUSINESS REPORT

From Our Own Correspondents

AIMO

Responding to needs of community

BANGALORE.

WITH the emergence of a strong and stable Central Government, capable of enforcing its policies and programmes in a climate of self-confidence, it was appropriate that the two-day session of the All India Manufacturers Organisation thought it fit to adjust its sights and role and responsibilities in tune with the Government's declared objectives of removal of poverty and the creation of opportunities for large-scale employment. A pragmatic approach informed the deliberations of the 31st annual session which adopted three resolutions on the "role and responsibilities of business and industry today", the "new basis for industrial partnership", and "financing the industry—large and small". The President, Mr V. V. Giri, inaugurated the session.

The outgoing President, Mr S. M. Dahanukar, while lending his support to the Government measures for the economic upliftment of the masses, called for a fresh look at the Government's basic policies. The abolition of poverty was associated with the creation of wealth; and the expansion of employment opportunities centred on the acceleration of the pace of growth of the gross national product, which rested primarily on the productive utilisation of the existing resources and a savings-induced policy to maximise savings from current income. During the past 12 to 15 years, it seemed the country's resources had been misdirected into low output and low employment projects. Concerted efforts were called for to push up the GNP by raising agricultural and industrial production. He said that there had been no visible impact on those two spheres which were the real guides to prove if the economy had moved to a take-off stage.

Mr Dahanukar pointed to the limitations placed on large industrial houses. It was wrong to prevent both talent and the resourceful abilities from coming into play when the urgent need was to increase production and provide increased employment. It was essential that the policy was revised so that those who were willing to invest, take risks and add to production of wealth were given an opportunity and encouraged to contribute to national wealth.

However, the President, Mr V. V. Giri, was of the view that what we need today is the rapid growth of labour-intensive small-scale and cottage industries and thriving ancillary industries. Wealth should not be concentrated in a few hands. Referring to labour unrest, he suggested that a suitable machinery be evolved to ensure better industrial relations.

While pledging its full support to the Government in the achievement of the objectives of removal of poverty, the AIMO

wanted a review of the respective roles of the management, trade unions and the Government in the efficient utilisation of these resources and suggested that the Indian Labour Conference should evolve a charter of objectives so that all the agencies worked towards an agreed national goal. Such a new basis would pave the way for a better understanding among management, employees and the community and help in tackling the problem of industrial strife which in 1969-70 had led to a loss of 27 million man-days.

On the role and responsibilities of business and industry, the AIMO resolution said that business and industry could no longer function in isolation but only as an integral part of the total environment which was fast changing. Its true role and responsibility in that changed context would, therefore, be to anticipate, understand and respond to the needs and urges of the community at large. In this task, it expected the Government to make a positive contribution by streamlining its procedures and cutting down delays in decision-making, besides improving inter-ministerial co-ordination and reposing greater trust and confidence in business and industry.

Some of the key areas calling for attention of business and industry, the AIMO said, were to evolve greater understanding of the role of Government and to suggest such modification in policies and

measures deemed necessary; evolve special employment programmes for immediate and long-term needs; widen managerial base in the true sense by professional appointments both at the level of the board of directors and operating management; curtail drastically all forms of ostentatious living and expenditure; spearhead research and development activities; launch active programmes of consumer guidance; undertake programmes of cost reduction; and volunteer acceptance of social audit for evaluating the quality of management performance in a number of vital spheres.

On financing of industry, large and small, the AIMO resolution said, one of the major constraints was the non-availability of adequate short-term finance for working capital requirements to operate industrial units even at the existing levels. It expressed concern at the *ad hoc* manner of imposition of ceilings on commercial bank credit and freezing of credit facilities in an arbitrary manner. In regard to term finance, the conference said it was the most opportune time for the financial institutions to streamline their processing machinery to cut down delays. In respect of large projects, it asked for joint participation of various financial institutions while suggesting that the actual processing must be done by the leading financial institution. The resolution suggested that a time limit of three months should be specified for completion of underwriting and loan arrangements and that insistence on personal guarantees should be dispensed with in the case of economically viable projects and of competent professional management. □

BANKING

The not-too-busy season

BOMBAY.

BANK credit outpacing deposit accretion is a normal feature of banking operations in the busy season (November-April). In the period immediately following bank nationalisation this phenomenon showed a tendency to prevail all the year round. This had created fears that inflationary pressures in the economy would be accentuated. The operations of the banks in the busy season that has ended indicate that the trend has now been reversed. The aggregate deposits of banks went up by about Rs 420 crores, while credit expanded by Rs 413 crores only. This is in contrast to the 1969-70 busy season trend when the deposit rise was of the order of Rs 320 crores and credit expansion of Rs 563 crores. A comparison of the one-year period ended April shows that the deposit accretion was Rs 883 crores while bank credit went up by Rs 590 crores only. It is significant that at the end of the slack season the deposit accretion in the one-year ended October period

was higher by Rs 9 crores than the rise in bank credit.

The deposit accretion is no doubt high because of the massive branch expansion programme. The process has also been accelerated because of the Government spendings from out of created money by the Reserve Bank as indicated by the rise in the overdrafts of the State Governments. The component of food advances in the bank credit expansion was high. This meant that the credit expansion for other purposes was less. The industry was no doubt placed in difficult situation particularly when its borrowings did not come under the priority category.

The restraint in credit expansion has come as a result of the tight-fisted policy of the monetary authorities. The Bank rate was stepped up by one point to 6 per cent in January and refinancing was made costlier. The reliance of the banks on the lender of the last resort was considerably reduced. This is not merely in

terms of outstandings but also in terms of the rise during the busy season. The smaller rise can be attributed to the fact that the outstandings at the beginning of the busy season were considerably higher than a year ago.

The banks increased their borrowings from the RBI by Rs 80 crores only as against Rs 202 crores in the last year's busy season. Thus nearly 20 per cent of the bank credit expansion was financed by the banks from RBI funds as against 36 per cent in the earlier busy season. Disinvestments in Government securities in the busy season are normally resorted to by the banks to finance the needs of their borrowers. In this year's busy season, the banks, however, added to their investments in Government securities by about Rs 37 crores. In the last year's busy season these investments had come down by Rs 100 crores. The RBI's directive to the banks raising the liquidity ratio to 34 per cent had contributed to this process. □

STEEL

Large imports of spares and refractories

NEW DELHI.

THE Government has rightly decided that while large scale steel imports should continue this year in order to meet the requirements of priority industries, the import of spares and refractories in adequate quantities should also be allowed to improve the operational efficiency of the steel plants. The new Steel Secretary, Mr H. C. Sarin, said at the annual meeting of the Steel Tubes Division of the Indian Engineering Association the other day that Rs 19 crores had been set apart for this purpose—Rs 10 crores for spare parts and the balance for refractories. Steel is the pace-setter for industrial development and recognising this the Government established additional capacity which could take care of the country's needs to a large extent. But this has not happened as some of the steel plants have been operating much below their rated capacity.

According to the NCAER, an additional one million tonnes of steel will be available if utilisation of capacity can be stepped up from the present level of 64 per cent to 75 per cent. While labour unrest has been largely responsible for the poor performance of the steel industry in recent years, the failure to provide it with essential materials, spares and components in sufficient quantities and in time have also contributed to it. The import of spare parts and refractories, therefore, should help to remove a major operational bottleneck.

Steel output can be expected to increase during this year and if an additional production of one million tonnes can be got from the steel plants, India may be able to cut down her steel imports severely next year, particularly in view of

Strategy for development

MR S. M. Dahanukar, the outgoing President of the All India Manufacturers Association, says that not only a check in prices but also a reduction in prices is necessary. The problem of prices could be tackled in two ways. First, by encouraging full utilisation of production capacity and, secondly, by lowering the level of indirect taxation on all essential mass consumption goods. For a massive programme of industrial development, particularly in the small-scale sector, Mr Dahanukar suggests a rapid expansion of agro-industries; a small reduction in corporate tax; higher development rebate for providing housing to the employees; removal of restrictions placed on large industrial houses on their investments; simplification of procedure to expedite Government decisions and the facility for expansion of small units in order to achieve the level of efficiency.

Gas prices

The Gujarat Chamber of Commerce and Industry says that a thorough analysis of the cost structure of the Oil and Natural Gas Commission should be made, particularly in respect of its gas prices. The unilateral decision of the Commission to raise the price of gas in Gujarat by as much as 125 per cent is, according to the Chamber, "unfortunate". This is unjustifiable particularly in view of the fact that power rates in Gujarat are much higher than in many other States. The advantages that accrue to the coal-bearing States by way of low cost in fuel for power generation should also apply to Gujarat because of the availability of gas in the State.

Mineral movement

The Federation of Indian Mineral Industries says that despite repeated representations by the trade and industry there has been no improvement in the movement of various minerals, both for export and for the domestic steel and ferro-manganese plants. The mineral industry is helpless in the matter of fulfilling its export commitments as a result of inadequate railway wagon supplies. In the first three months of the current year—January to March—the movement of iron ore from the Bihar-Orissa region for export from Paradeep port was only 12.48 lakh tonnes as against the target of 18 lakh tonnes. As a result of wagon shortage there has been an accumulation of about nine lakh tonnes of iron ore at rail-heads, besides the huge dumps at mine-heads in the Bihar-Orissa region. The iron ore mines are facing the threat of imminent closure and resultant unemployment of labour.

Wagons for cement

Mr R. D. Shah, President of Cement Manufacturers Association, Bombay, says that the current shortage of wagons for lifting stocks is responsible for scarcity of cement in the market. While the industry is keen to

BUSINESS OPINION

serve its customers, the blocking up of railway wagons in the eastern zone, as a result of labour and law and order problems, severely hit the movement of cement from producing centres. During April, the industry carried a stock of about 15 lakh tonnes of cement and clinker which is nearly a month's production of the industry. Normally, the manufacturing units keep only a fortnight's stock and release the rest to the consumers. This was not possible last month owing to the shortage of wagons. Besides hampering the movement of cement, the wagon shortage is also causing an acute shortage of coal in cement plants.

Salt freights

The Bharat Chamber of Commerce, Calcutta, says that the salt imported from Tuticorin and the West Coast to Calcutta by sea would cost more as a result of the recent unilateral amendments to the existing salt Charter by the Indian Coastal Conference. The proposed amendments, according to the Chamber, would lead to an increase in the landing cost of salt at Calcutta port by as much as Rs 15 per tonne. The amendments which were designed mainly to reduce free time available to charterers for loading and unloading purposes would result in greater risk and liability of demurrage at enhanced rates.

Phonogram services

The Madras Provincial Foodgrains Merchants Association says that the Telegraph Department should reconsider its decision to discontinue with effect from May 1 the practice of sending confirmatory copy of the phonogram to the sender. The Association says that the confirmatory copy is essential as there is every risk of the text of phonograms being heard wrongly by phonogram operators and the sender could correct the possible mistakes in time only if he receives the confirmatory copies. The Telegraph Department has been increasing from time to time the cost of phonograms and it is only fair that the users should get proper services which includes a confirmatory copy.

Photo films

The East India Photographic Traders Association, Calcutta, says that photo film dealers are concerned over the cut in their profit margin on the sale of products manufactured by the public sector Hindustan Photo Films. The company has recently reduced the margin of profits from 33 per cent to 23 per cent on an average on the plea of rising production costs. According to the Association, this unilateral decision by the company would encourage other producers in the private sector also to follow suit.

what Mr Sarin disclosed about the steel shortage in the country. According to him, the shortage had been "exaggerated" by interested parties and speculators, and in substantiation he pointed to two developments. First, as against a shortage of 2.2 million tonnes estimated by the trade and industry, applications for licences for the import of only 80,000 to 90,000 tonnes had been received. Secondly, the prices of billets and other steel products in short supply fell by about Rs 400 per tonne as soon as it was known that the Government had decided to allow the import of these items. All this shows that the shortage has been accentuated by stocks going underground.

The President of the Steel Tubes Division, Mr H. Chakravarti, in his address complained that the 10 per cent earnest money deposit for steel indents was worse than the much-hated gold control order. While there is a case for bringing it down, it would not be prudent to do away with it as a deposit is necessary to ensure that the demands on the Joint Plant Committee are reasonable and legitimate. The time

for dispensing with it is only when steel availability improves and can be sustained largely through increased indigenous production.

However, Mr Chakravarti's suggestion that instead of skelp, steel items like ingots and billets which are processed into skelp should be imported is sensible. It will result in considerable saving of foreign exchange. Similarly his proposal that special steels except stainless steel should be brought under OGL only for industrial customers and not the trade deserves consideration. This would obviate irksome delays in getting matching steel which, though needed only in small quantities, makes all the difference in the manufacture of the final product. In the interest of steel production on which hinges rapid industrial development the Government would do well to depart, in special circumstances, from its policy of progressive canalisation of imports through State agencies. □

TRACTORS

World Bank loan for Tamil Nadu

MADRAS.

THE visit of the Chairman of the Tamil Nadu Land Development Bank to the US to arrange for the import of 3,500 tractors with the help promised by the World Bank is evidence of the importance that the Tamil Nadu Government attaches to mechanisation of agriculture. The current expectation is that 35 to 50 hp tractors will be made available under the aid programme. It is believed that the tractors can be easily sold by the Land Development Bank which in recent years has financed the purchase of tractors and the construction of wells for irrigation.

According to the Secretary of the Bank, loans totalling Rs 2 crores were disbursed during the last financial year. Thus the State Government has been making available, on an increasing scale, long-term credit for productive purposes. An important feature of the Bank's operations is that, it has been giving consistently more assistance to small farmers owning 3 to 10 acres which are suited for intensive, personal cultivation. The development of well irrigation in the dry regions of Tamil Nadu is largely the result of the Bank's policy of lending to eligible borrowers. The Bank, in recent years, has also helped small planters; not only tea, but coffee-growers have benefited by the loans given by it.

The Land Development Bank operations are financed with the help of the accumulations in the sinking fund maintained for redemption of its debentures. The debentures have thus gone up in the investors' esteem, though the total outstanding debt may seem large in relation to the issued capital and the reserves of this State-aided institution. The Bank has provided large sums of money for the sinking and deepening of wells and purchases of pumpsets to enable farmers to raise two or three crops a year. The loans for land reclamation schemes, however, are comparatively small. The increase in food production in the State leading to relaxation of controls is due to the help provided by the Bank for increasing irrigation facilities.

So far as the distribution of the advances made by the Bank is concerned, backward districts like Dharmapuri have been getting less than Coimbatore where irrigation has already contributed to efficient farming. In regard to loans given for the purchase of tractors, Dharmapuri is a long way behind Tanjore and South Arcot, which have been selected for further agricultural development. While the Bank is now an agency for promoting intensive modern farming and not merely an institution for giving loans against mortgaged lands, it has been explained by the Chairman that agricultural improvement in recent years covers backward areas like Pudukottai. He is optimistic about the ability of the Bank to serve as an instrument of growth. The increase in the loans distributed by the Bank to small farmers has been brought about to a large extent by the simplification of lending procedures. The Bank, by virtue of its record, qualifies for regular assistance from the Agricultural Finance Corporation. □

Cotton made us famous

BUT

today we do much more than trade in cotton. The house of PATEL-VOLKART has extended its interests to several other fields of business described here and earned in each of them a reputation for its excellence of service.

COTTON: Suppliers of all varieties of Indian Cotton, Foreign Cotton and Cotton Waste.

SHIPPING: Representatives of renowned Shipping Companies with regular Cargo and Passenger Services.

CLEARING & FORWARDING: Clearing & Forwarding Agents at Cochin and Madras.

ROAD HAULAGE: Transporters of goods by road in Madras and South India.

TRAVEL: Travel Agency at Bombay.

PATEL-VOLKART LIMITED,

CENSUS 1971: STATE-WISE DATA—I

Maharashtra

By Commerce Research Bureau

WITH a population of 503 lakhs (provisional) as on April 1, 1971, Maharashtra continues to occupy the third place among the States of the Indian Union, after Uttar Pradesh (883 lakhs) and Bihar (564 lakhs). In terms of population, Maharashtra is almost as big as France or Mexico. During the decade 1961-71, the population of the State has gone up by 108 lakhs or by 27.2 per cent, which is higher than the overall rise of 24.6 per cent for the country. As regards the density of population, Maharashtra has 163 persons per sq km as against the all-India average of 182.

In education Maharashtra State has made commendable efforts and increased its literacy rate from 30 per cent in 1961 to 39 per cent in 1971. In terms of literacy rates, it ranks third among the States following Kerala and Tamil Nadu.

Expectedly, Greater Bombay is the most populous district of the State followed by Poona and Nasik. Wardha is the smallest district in terms of population. The decennial growth of population in Greater Bombay district is the highest at 43 per cent, the next being Thana district with 38 per cent. This is largely due to the greater influx of people into these districts. If we leave aside Greater Bombay district (with the density of population of 9,837 per sq km) as a special case, Kolhapur with 253 per sq km has the highest population density. It is followed by Thana (238 per sq km). On the other hand, Chandrapur, with forests and tribal areas, is the most thinly populated district (64 per sq km).

Females are fewer than males in all the districts with the exception of Kolaba, Ratnagiri and Satara. The preponderance of females in these districts is largely the result of substantial migration of the male population in search of livelihood. A large part of the labour force in Bombay comes from Kolaba and Ratnagiri districts. On account of the influx of more males than females, the sex ratio is the lowest in the case of Greater Bombay.

In the State now, there are 17 cities with a population of more than one lakh each. During the decade 1961-71, five new urban centres—Dhulia, Jalgaon, Sangli, Aurangabad and Nanded—have emerged with a population of one lakh each. These 17 cities account for one-fifth of the total

population of the State. Out of these, Greater Bombay and Poona urban agglomeration occupy second and ninth places respectively among the nine largest cities of India. Greater Bombay accounts for 12 per cent of the population of Maharashtra. During the past decade, more or less all the districts have made progress in respect of extension of literacy. The faster growth of literacy is significantly evident in the relatively backward districts such as

Osmanabad, Aurangabad, Chandrapur, Parbhani, Bhil and Nanded. These districts still trail far behind the average level of literacy for the State as a whole. The highest percentage of literacy is found in Greater Bombay (64) and the lowest in Nanded district (22). It may be noted that Greater Bombay has the distinction of being the most educated metropolitan city of the country. (See summary tables on page 926.)

COMPANY MEETING:

TUBE INVESTMENTS OF INDIA LIMITED, MADRAS

Chairman's Statement

EXTRACTS from the Statement of Sir A. Ramaswami Mudaliar, KCSI, DCL (Oxon), Chairman, Tube Investments of India Limited, circulated to the Shareholders in connection with the 22nd Annual General Meeting of the Company held at the Registered Office at "TIAM HOUSE", 11/12, North Beach Road, Madras-1, on Friday, 7th May, 1971.

General Conditions

As is well known to you, an air of violence permeated throughout our country with some areas disturbed more than others. This heightened the feeling of political instability. Economic growth was the first casualty. Inflation, in consequence, got a shot in the arm: raw material prices and those of industrial products being badly affected. Fortunately, with agricultural production the highest so far, prices of most of the food items remained unaffected by inflation. Steps to contain inflation, I am sorry to say, neither followed a planned approach nor were pursued with determination.

If increase in the bank rate was effected to make money more costly and restrictions on borrowings placed to decrease the total availability of money, these being conventional measures to halt inflation, it becomes difficult to understand how wage increases, unrelated to productivity, on generous scales both in the industrial and non-industrial sectors could fit into this economic scheme of things. It appears to me that the old fashioned method of combating inflation, namely, with increased production of goods and services to satisfy fully demands may still be the best solution, and we would do well to direct the Nation's resources towards this end. It must then be obvious that our policies on credit availability, on licensing, on installing of new Units and the expansion of existing ones must have the broad objective of increasing production because in the ultimate analysis the foundations of prosperity and of a strong society can only be through plentifulness of supply of goods to banish wants; distribution of abundance alone is meaningful and satisfying.

Fortunately, and this bodes well for the future, the emergence recently of a stable government at the Centre should remove all political uncertainty which was responsible for economic stagnation. We are now in a position to forge ahead. In this situation, non-availability of credit to productive Units, and delays in the clearance of desirable projects that call for implementation, have no place. We should show a realism in our plans and policies and urgency in action which are the needs of the moment. I have every hope that as time unfolds the future, it will bear out that we did not miss the opportunities for growth presented today. I now turn to the affairs of the Company in the period under review.

Company's Operations

The 17 months' period for which accounts are presented, I realise, makes difficult comparison with the previous financial year. Throughout in my statement, therefore, wherever I have attempted assessment of current performance in relation to that of the last financial year, I have taken for measure the proportion of the figures that represent a 12 months' period only, to

give you a full appreciation of the stewardship of the Company during these 17 months.

Income and Profits

The sales and other income of the Company were higher by 15 per cent over that of last year while profits before tax rose by 24 per cent, despite substantial increases in the costs of materials used. The increase in profits was due, in large measure, to the taking on of outside work on a sub-contract basis to utilise the existing facilities rendered idle through lack of steel and other raw materials and also because of realisation of higher prices for steel scrap. A better application of resources in all the Units including the Subsidiaries has also made some contribution to improved profitability. In the case of the bicycle Unit, however, the rising costs could not be neutralised and this has adversely affected the results of this Unit. I have detailed elsewhere the case for a price increase on cycles to make for a fair return on the investments in this Unit as well.

Dividends

The Directors have recommended a final dividend of Rs 8 per share, which together with the interim dividend of Rs 7 paid already makes a total payment of Rs 15 per share for the period as against fractionally over Rs 14 per share if the dividend had been maintained at the last year's level. In making this recommendation of a modest increase, the Directors took into consideration the ruling conditions in the money market and felt it would be in the interests of the Company to retain in reserve funds.

TI Cycles of India

I must now refer to the difficulties experienced by the Cycle Industry, as a whole. The Government increased the basic price of steel effective 1st January, 1970 which put up by a considerable extent the prices of all steel items, some of these being higher than the basic price increase warranted. Cycle being essentially a steel product was directly affected. Around this time, the nickel prices shot up in the world markets. Both steel and nickel, as the prices rose, also became scarce on the market. Labour costs have been perennially going up, particularly in those cases, as ours, where dearness allowance is linked to the index of cost of living. All these increases put up the costs of manufacture of a cycle to an enormous extent and the Industry as a whole sought the Government of India's permission to put up the selling price of a cycle by a modest amount of Rs 16 per cycle even though the increase in the cost of manufacture was much higher. You may be aware that the Industry voluntarily accepted some years back not to put up prices of cycles unilaterally. After considerable negotiation, study of all documents that proved the Industry's case for a selling price increase of Rs 16 per cycle, and after a lapse of 5 months in this process of study and nego-

tiation, the Government allowed an increase of Rs 9.50 per cycle from 1st June, 1970. I am sorry to say that not only this relief so urgently sought by the industry was slow in coming but also when it came, it has been wholly inadequate. We sometimes fail to see the cardinal and obvious fact that if an investment made does not get a reasonable return and in the case of Cycle industry, there is virtually no return, investment either gets diverted or withdrawn. This is a commonly experienced economic phenomenon. When that happens, it brings in its train shortage of the commodity, abnormal prices thereafter and unemployment of both skilled and unskilled labour force. Ensuring, therefore, that any industry earns a fair return on its investment is, I submit, not only a natural obligation of the investors, but even more of the Government who have the duty to see that economic conditions are not impaired. I feel sure that it is not the intention or wish of the Government of India that the Cycle Industry in our country important as it is, for the well-being of the employees and the public should become economically strangled in this way due to reluctance to or delay in according legitimate price increases, clearly therefore the present investment must earn satisfactory return in order to provide for technological development and necessary replacements.

While on the subject of the Cycle Industry, I may mention that the industry earns more than Rs 4 crores a year by way of export earnings. If this industry, therefore, which serves the common man's interests in India, cycle being the commonest form of transport, is not helped to operate profitably, its contribution to export earnings of the country is bound to be affected adversely.

Your Company not only maintained but even increased its exports during the year but unless margins available on domestic sales improve the volume of exports, naturally, is bound to fall in future. The Company has already taken some steps and contemplates taking further measures, including an approach to the Government for a further price increase in the selling price of cycles, all with a view to place the cycle Unit in a healthy situation. I sincerely trust that these efforts will bring about the desired result.

The Wright Saddles of India

There was a drop of about 10 per cent in the production of saddles largely because of shortage of certain essential items, mostly of steel. The demand for our saddles continues to be satisfactory.

Tube Products of India

Both production and sale of tubes were much higher than in the last financial year and could have been further improved if only steel had been supplied to the extent of official allocations made to us. In fact, we had to shut down the plant twice for want of steel and even during the remaining period, we could not use the plant to full capacity.

You may recall that in my statement last year, I mentioned that a beginning had been made in the export of tubes. These efforts were pursued vigorously during the period and we were able to effect a sizable increase in our exports during the period under review, compared to the last financial year.

The expansion work of CDW tube manufacture is now complete and subject to steel being available to the required extent, we should be able to report better figures next year.

Cold Roll Mill

The production of Cold Roll Mill was slightly over that of last year. While we could have increased the output to a greater extent we were held back from so doing primarily due to the steel shortage. The Mills had to be closed down frequently and worked only partially for some of the time. We also encountered some difficulties with the work rolls performing poorly. In this, as usual, Tube Investments Ltd, UK, came to our rescue readily with their expertise in solving the deficient performance of work rolls. They deputed a highly qualified senior scientist from their Research Laboratories in the UK whose findings and advice have been of considerable benefit.

There is good demand for the Company's products and subject to steel position being satisfactory, I should be able to report higher output next year.

TI Metal Sections

I am happy to report that despite a difficult material position, the outturn of Metal Sections showed a 40 per cent increase over the last year, with the result that for the first time the investment in this Unit started giving fair returns. This trend is likely to progress further in the ensuing year.

SUBSIDIARY COMPANIES

TI Diamond Chain Limited

Both production and sale of industrial and cycle chains were significantly higher than in the last year. The exports were also higher indicative of acceptance of the Company's products not only in the domestic market but also internationally.

As already stated in my statement last year, we are still awaiting an import licence for bringing in certain balancing equipment for which applications had been lodged in early 1969. We anticipated then that the cost of the project including buildings would be around Rs 44 lakhs. Since then, there was a revaluation of the German currency and price increase within the country and these put up the costs of both machines and needed materials, with the result that the scheme is expected now to cost about Rs 66 lakhs instead of Rs 44 lakhs, provided of course, the import licences are received in reasonable time. We may have to make a 'Rights' issue of shares to augment the finances needed to implement the project.

TI Miller Limited

The Company has improved the sale of cycle lamps compared with the last year but not to the extent of the target set. The scooter lamp sales showed a decline. There is however, a fair prospect of scooter lamp sales picking up this year. The total value of sales, as can be seen, is higher than last year but profit before tax remains almost at the same level as the last year because of increased cost of materials.

Prospects for the Future

The Company has made so far significant progress as can be seen from the following table of earnings per equity share

of the Company after taking into account the earnings on the investment of the Company in the Subsidiaries:

Earnings per each Equity Share of Tube Investments of India Limited—(before tax):

1968—Rs 12; 1969—Rs 26; 1970—Rs 33.

The shareholders may be interested to know that the value of each equity share of the Company measured by the tangible assets of the Company and after taking into account the proportion of tangible assets of the Subsidiaries representing the Company's investment in these Subsidiaries, works out to—

Asset value of each Equity Share of Tube Investments of India Limited:

1968—Rs 155; 1969—Rs 161; 1970—Rs 172.

We expect, barring unforeseen circumstances, to maintain the progress in the year ahead. A certain amount of rationalisation in production, and methods of production, organisational changes and revision of systems have brought about greater effectiveness in the use of resources. The results, so far achieved encourage pursuance of these efforts with greater vigour.

Offer of Shares

I am happy to report that an opportunity may soon be available to the shareholders of the Company to acquire a few shares of the Company at a concessional price compared with the market prices of these shares today. In terms of an understanding with the Government of India in 1959, the Tube Investments Limited, UK, who hold 60 per cent of the equity shares of the Company will sell 25,000 shares this year and 3,125 shares next year to bring their holding down to 52.5 per cent in the Company's equity capital. They have proposed to the Government and the Government have approved offering the 25,000 shares to the existing shareholders of the Company, excluding themselves (Tube Investments Limited, UK) in the proportion of 1 share for every 6 (six) shares held excluding fractional entitlements of less than half a share, on this basis. This sale would be at a concessional price. The exact price is still to be approved by the Government. As soon as the price is approved by the Government, the Agent nominated by Tube Investments Limited, UK, will communicate to you the exact details of the scheme and the terms governing the offer.

ORIENT GENERAL INDUSTRIES LTD., CALCUTTA-54

REVIEWS

Limited study of railway traction

Economics of Diesel and Electric Traction: National Council of Applied Economic Research, New Delhi; Pages 115; Price Rs 16.

This is an empirical study of comparative economics of diesel and electric traction of railways based on micro studies of just three sections, namely, Durgapur-Mughalsarai, Ratlam-Baroda and Durg-Bhusaval. Whether such a small sample—and not even necessarily a representative cross-section of the vast stretch of Indian railways—should form the basis of an overall judgment on relative economics of different systems of traction remains questionable, more so because it does not take due care of national endowments; an improved version of steam traction is not even considered for comparing costs.

Summarising factors in favour of electrification and dieselisation, the study states that "electrification should always be favoured, if performance of the system is alone to be preferred. The superiority of the electric locomotive as far as traction performance is concerned is unquestioned. Roughly a superiority ratio of two is accepted; in other words, for equal locomotive weights an electric locomotive can have a load twice as heavy as a diesel loco does or else for equal loads, the electric loco runs twice as fast. This factor becomes important when high speeds and/or heavy loads are desired or where the railways have steep gradients. Second, electric traction ensures efficient use of energy. Losses are negligible. Finally, investments in loco stock and maintenance costs are lower compared to diesel traction.

"The important factor in favour of dieselisation is that the fixed installation costs are negligible. In a capital short economy, this can be a very important consideration. Further, the switchover to diesel traction can be done at a very short notice..." (page 51).

Perhaps, the writers of the study did not have the benefit of technical advice in depth. Otherwise they would have known about the latest innovation made by the celebrated railway engineer, Mr M. M. Suri, through which a 2,500 hp diesel loco gets its power boosted to 6,000 hp with an addition of a turbine of 3,500 hp. This turbo-diesel loco with 6,000 hp has almost a similar weight as two 3,000 hp electric locos. This should indicate that power-to-weight ratios in electric and diesel locos at least at higher horse powers can be similar and one need not claim superiority over the other.

The real argument against too much dieselisation is that while most of the electrical energy generation does not require much foreign exchange, a large part of the crude, from which diesel oil is extracted, is imported. Thus, in the long run, a large programme of dieselisation is likely to fail because a larger outlay of foreign exchange would be needed from year to year for importing crude oil. On the other hand, some technical experiments being conduct-

ed in Switzerland and Austria have indicated that energy utilisation in steam engines can be improved by 30 per cent of the existing ratios (thermal to mechanical power), which, if actually attained, would make steam locos again economic. This possibility has not been considered in this study either.

This is not to suggest that the present study is to be discarded. The point to remember is that this type of study should not only take economics and finance into consideration—in the perspective of our national endowments—but also technical developments that have already taken place and innovations which are being attempted. The science of technological forecasting is being made more rigorous every year. A little reference to this science by market researchers could be quite beneficial.

Again, there is undue emphasis on past performance in the projection of traffic densities. In an economy, where structural changes keep on taking place at a high speed, the dynamics of change needs to be studied in greater depth. In this dynamics, human endeavour, environmental changes, (for instance, many industries are shifting from Calcutta not so much owing to political reasons but because of deterioration in total environment) and several other factors need to be taken into account. No rule of thumb or simple algebraic projection can be valid. The present study suffers from this disability as well.

In sum, the study has only limited merits and its conclusions cannot be used for arriving at policy decisions as such, unless other relevant data, as indicated above, are also considered. These data are not given in this volume.

O. P. Arya

Public sector at a glance

A Handbook of Information on Public Enterprises 1970: Bureau of Public Enterprises, The Manager of Publications, Delhi; Pages 273; Price not mentioned.

The volume of literature on the public sector in India is by now vast indeed. Most of these documents are generally published in fulfilment of some statutory responsibility. But the multitude of documents itself makes it extremely difficult to get a particular type of data on public sector enterprises whenever one wants these for quick reference. Good reference works are rather rare because the official agencies are not expected to produce these in terms of their official responsibilities. If, nevertheless, the handbook under review has been prepared and released to the public, the credit goes entirely to a few enthusiastic officials in the Bureau of Public Enterprises, who appear to have taken up almost on their own the important task of producing a fairly comprehensive reference volume. The first edition of this

volume was issued about a year ago. This second edition, however, marks a great advance over the first one. A lot more information has been added. One gets between the two covers of this handbook a mass of statistical and other information for which otherwise one would have to hunt through scores of publications—and even that may be without success.

Part I of the handbook is devoted to statistics under the following heads: Investment, production, financial working, contribution to the exchequer and miscellaneous data. Part II is devoted to various policy decisions which govern the general management, financial management, production and materials management and construction management of the public sector enterprises. Parts III and IV cover recent developments in various individual units. Part V gives the names and addresses of government enterprises. All told, it is an excellent handbook. Let us hope that each new edition would be more comprehensive than the previous one.

Finally a suggestion for further improving the handbook. While this handbook covers the Central Government non-departmental enterprises in a fair degree of detail, two other major segments of the public sector remain yet to be covered, namely, departmental enterprises of the Central Government and all enterprises of the State governments. It is, of course, somewhat difficult to collect data for these two types of enterprises. One may hope, however, that the enterprising officials of the Bureau of Public Enterprises will make efforts in this direction also and fill up a long-felt lacuna.

Narottam Shah

IN BRIEF

Practical Business Planning—A Manager's Guide: Charles E. St. Thomas; D. B. Taraporevala Sons & Co Private Ltd, 210, Dr Dadabhai Naoroji Road, Bombay-1; Pages 141; Price Rs 6.

Brought out in co-operation with American Management Association of New York, the book analyses the application of planning as a managerial tool for directing the collective efforts on a targeted and meaningful activity. Most of the Western books on management are written in the context of business environments prevalent in those countries. In India, therefore, an intelligent reader has not only to understand the import of the theories enunciated and applications analysed, but also grasp the thinking underlying and leading to those applications, so that he can superimpose them on parameters suited to Indian conditions, while practising them in his duties.

Industry and Trade in some Developing Countries

A Comparative Study

IAN LITTLE, TIBOR SCITOVSKY
& MAURICE SCOTT

Paper covers 40s

Since the Second World War many developing countries have embarked on a drive towards industrialization. This is the most ambitious study yet undertaken of the means which they adopted, and the results. It is largely based on independent but simultaneously commissioned studies of some countries: *India* (see below); *Pakistan* by Stephen Lewis 25s; *Mexico* by Timothy King 15s; *Brazil* by Joel Bergsman 35s; *Taiwan & The Philippines* by John H. Power, G. P. Sicat & M. Hsing 50s.

THE BANK OF RAJASTHAN LIMITED

Registered Office:—Clock Tower, Udaipur

Central Office:—Johari Bazar, Jaipur

Directors' Report for the year ended 31st December, 1970

The Directors have pleasure in submitting to the shareholders, the Balance Sheet and Profit and Loss Account for the year ended on 31st December 1970 together with the Auditors' Report.

Capital and Reserves: The paid-up Capital and Reserves of the Bank aggregate Rs. 48,06,980 as on the close of business on 31st December 1970. Out of the profit for the year 1970, a sum of Rs. 1,67,000 has been transferred to Reserve Fund under Section 17 of the Banking Regulation Act, 1949 and Rs. 70,000 to Other Reserves, raising the total Reserves of the Bank from Rs. 20,59,980 to Rs. 22,04,980. The total Reserves thus exceed the paid-up capital of the Bank by more than Rs. 3 lacs.

Working Funds: The working funds of the Bank have risen to Rs. 21,87,40,693.40 which are more by Rs. 8,45,42,864.11 as compared to the figure of the last year.

Deposits: The deposits of the Bank have increased during the year by 19.47 per cent and now stand at Rs. 19,80,49,502.28. The total number of deposit accounts have also increased from 1,04,027 to 1,18,798 during the year under review.

Liquidity: The liquid assets of the Bank (Cash in hand, Balances with Banks, Money at Call and Short Notice and Investments) as on 31st December, 1970 were 48.7 per cent of the Bank's total liabilities as compared to 29.86 per cent of the Scheduled Banks in India.

Investment: The investments of the Bank amount to Rs. 5,02,55,583.77 of which 98.5 per cent was invested in Government and other trustee securities. 72.28 per cent of our investments mature within the next ten years.

Advances: The total Advances including Bills Purchased and Discounted as on 31st December 1970 stood at Rs. 11,54,41,604.34 which were 58.86 per cent of our total deposits. The Bank is continuing to make advances for promotion of Agriculture and Small Scale Industries. The limits sanctioned and in force for advances to Agriculture and Small Scale Industries amounted to Rs. 57,05,000 and Rs. 3,10,17,000 respectively and the actual utilisation was Rs. 33,36,000 and Rs. 68,71,000 respectively as on 31st December, 1970.

Branches: During the year under review, we opened three branches at Bombay (Fort), Bhindar (Udaipur District) and Sawaimadhopur (Sawaimadhopur District), raising the total number of branches to 70. We are shortly opening our branches at Rikhabdeo, Delwara, Garbar, and Udaipur University Campus in Udaipur District, Bans in Chittorgarh District and Singhana in Jhunjhunu District. Besides the above, we propose to open a few more branches during the current year.

Profit and its Appropriations: The net profit of the Bank for the year under review was Rs. 4,85,438.57 as against Rs. 7,99,646.88. After adding thereto, a sum of Rs. 27,647.48 brought forward from the previous year, a sum of Rs. 8,60,081.05 is available for appropriation.

After making the following appropriations:—

	Rs.	P.
To Reserve Fund under Section 17 of the Banking Regulation Act, 1949	1,67,000.00	
To General Reserve Fund	70,000.00	
To Bonus to Staff	8,75,000.00	
The Directors now recommend to declare a dividend at 11 per cent per annum which will absorb a sum of	2,20,000.00	
Leaving a balance to be carried forward	28,081.05	

Management: Major Daulat Singhji, the first full-time Chairman and Chief Executive Officer of the Bank resigned and was relieved from the services of the Bank with effect from 18th July, 1970 and Shri S. D. Mehra, retired Secretary and Treasurer, State Bank of India, Hyderabad Circle, was appointed as full-time Chairman and Chief Executive Officer with effect from 18th July, 1970. The Bank places on record, the appreciation of the meritorious services rendered by Major Daulat Singhji as full-time Chairman and Chief Executive Officer.

Directors: Under Article 104 of the Articles of Association of the Bank, Shri S. D. Mehra was co-opted by the Board of Directors as a Director on the Board with effect from 28th May, 1970 and was appointed as full-time Chairman and Chief Executive Officer from 18th July, 1970. Major Daulat Singhji resigned from the post of Chairman and Chief Executive Officer and was relieved on 18th July, 1970. In view of his vast administrative experience and his interest in the field of Agriculture, the Board of Directors, appointed him as an Additional Director on 8th August, 1970, under Article No. 104 of the Articles of Association of the Bank. He will continue to hold the Director's Office upto the date of the Annual General Meeting of the Company proposed to be held on 8th May, 1971. Proposal for his election as a Director has been received and you are requested to elect him as a Director on the Board of Directors of the Bank.

In accordance with Article No. 119 of the Articles of Association of the Bank, Shree Harnath Kothari retires from the Board of Directors by rotation and being eligible, offers himself for re-election.

Appointment of Auditors: The shareholders are requested to appoint Auditors for the current year and to fix their remuneration. Under Section 20 (1A) of the Banking Regulation Act, 1949, every Banking Company is required to obtain the previous approval of the Reserve Bank of India for appointing the auditors. Ordinarily the retiring auditors would have been proposed for reappointment as Statutory auditors for the next year but a change appears necessary, because in the opinion of the Reserve Bank of India, it is not desirable that the same auditors associated with a bank continuously for an unduly long period of time and they have advised that Bank should take immediate steps for their rotation.

The Directors have, therefore, decided to recommend the appointment of Messrs. J. K. Singhal & Co., as auditors after the conclusion of the ensuing Annual General Meeting to be held on 8th May, 1971 till the conclusion of the next Annual General Meeting in 1972 and accordingly an application is being made to the Reserve Bank of India seeking its approval to their appointment as auditors. You are requested to kindly approve the appointment of Messrs. J. K. Singhal & Co. as auditors for the next year.

The Directors are thankful to the shareholders, Government of Rajasthan and the customers of the Bank for their continued patronage. They also thank the Officers and the Staff of the Bank and place on record their appreciation of the services rendered by them.

By Order of the Board,
S. D. MEHRA,
Chairman.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of the Bank of Rajasthan Limited, Udaipur, as at 31st December, 1970 and the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 17 branches audited by us and 63 branches audited by other Chartered Accountants. In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949, read with the provisions to Sub-section (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Regulation Act, 1949.

We report that:—

- we have obtained all the informations and explanations which, to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice, have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with books of account and the returns;
- the reports on the accounts of the branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report;
- in our opinion, and to the best of our information and according to the explanations given to us, the said accounts together with notes thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1970 and Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

EXPORT ANGLE

By Stevedore

Cable exports

THE consortium of cable manufacturers has received large orders for cables worth Rs 5 crores. In a stiff contest with the UK, France and other industrially advanced countries, the consortium has won a UAR order for 1.1 and 11 kV aluminium conductor paper insulated lead covered and armoured cables worth Rs 2.50 crores. From USSR it has received order for 10 kV aluminium conductor cables worth Rs 1.52 crores and from Public Utility Board, Singapore for 22 kV cables with copper conductor valued at Rs 70 lakhs. In the case of the UAR export order, however, the consortium is finding some difficulty. The needed Government approval for exports has not yet come so far as it has been stated that the necessary allocation for funds had not been made in the bilateral trade agreement. Cables with aluminium conductors are special items and the market for this is limited. The industry wants that the cables should be included in bilateral trade agreements and preference in allocation of funds under the agreement be ensured. If adequate funds are made available, additional orders from the UAR can possibly be secured. A delegation from UAR is expected to visit Delhi shortly to sort out the difficulties about the export of goods from here. Industry expects that during the meeting with the delegation arrangements would be made for expediting the cable exports from here.

During the last four years since the formation of the consortium the cable exports are on increase. The exports so far have been of the order of 2,125 kms worth Rs 8.7 crores. In the past 12 months alone the industry has received export orders worth Rs 5.75 crores. Perhaps the biggest gain of the consortium drive has been the export of cables of internationally accepted standards from the country. The Rs 5.75 crores export orders for power cables in the last one year is inclusive of Rs 4.5 crores of P.I. cables with aluminium conductors and Rs 1.15 crores of cables with copper conductors. Copper conductor cables involve import of basic material. Aluminium conductor cables are made substantially out of indigenous raw material. The industry's effort has been to sell more of aluminium conductor cables. Export of aluminium conductor cables has had a considerable success in the UAR and the USSR. Other countries covered are: Malaysia, Ceylon, Malawi, Dubai and the Sudan. □

New export corporation

THE Project and Equipment Corporation, the newly formed subsidiary of the State Trading Corporation, is likely to provide a push for the export of railway and engineering equipment. So far the Corporation has received orders worth Rs 63 crores for these items from countries such as the UAR, Yugoslavia, Hungary, Poland, the USSR, Australia, Sweden, East Africa, Sudan, Iran, Burma and Taiwan. The bulk of the orders worth Rs 53 crores are for railway equipment and the rest for textile

machinery, machine tool castings, aluminium conductors, handtools and rock drills. Besides these, the Corporation is also negotiating the sale of many other products like railway coaches, cement plants, refineries, hotel equipment, construction equipment etc which are likely to result in more orders in the near future. The Corporation has also plans to pursue turn-key projects abroad vigorously. These include construction of new railway lines, building complete industrial plants etc, starting with their preliminary surveys to final building. The Project and Equipment Corporation was formed recently and the engineering and railway equipment division of the STC was merged into it. □

Paints for Russia

BLUNDELL Eomite Paints of Bombay has started executing a major order for the supply of Rs 18 lakhs worth of

emolite pammel synthetic enamel packed in small tins. The material is being manufactured according to the specifications of the Soviet buyers and is packed in decorative tins with labels printed in Russian language. The company has executed similar orders from Thailand and Burma. □

Coal to U.K.

SHIPMENTS of coal against the first ever export contract signed with the UK for this commodity are expected to begin this month. In its bid to find outlets for Indian coal, the Minerals and Metals Trading Corporation recently succeeded in getting an order for 2.5 lakh tonnes of coal from the UK. The MMTC has also made arrangements to export 1.84 lakh tonnes of steam coal, 26,359 tonnes of slack coal and 9,000 tonnes of coke to Burma. □

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities, the items required and the closing dates of these tenders are as follows:

Argentina

SEGBA, Buenos Aires; Equipment, material, assembly and commissioning of an internal telephone system to operate in transformer sub-stations; May 31, 1971.

Burma

Project Director, Tarpaulin Plant Project No. 16, Kyauk-waing, Pagoda Road, Rangoon; Dyestuffs and chemicals; May 30, 1971.

Hongkong

The Secretary, Central Tender Board, Colonial Secretariat, Lower Albert Road, Hongkong; Toilet paper; June 4, 1971.

Indonesia

The Ministry of Trade, Republic of Indonesia, Djalan Abdul Muis, Jakarta; Fertilisers; June 3, 1971.

Iran

Tehran Regional Electric Company, Jaleh Square, Tehran; Paper insulated underground power cables and accessories for operating up to 20 kv; June 12, 1971.

Iran Tobacco Company, Tehran; Steel-yard for weighing cigarette cartons; June 13, 1971.

Iraq

The President, Central Foreign Purchasing Board, Baghdad; Porcelain china and iron equipment; May 23, 1971; petrol launches; June 6, 1971.

Iraqi Ports Administration, Basrah; Low tension underground cables; May 26, 1971; Teleprinter equipment; May 26, 1971.

Director General of Public Works, Ministry of Works and Housing, Baghdad; Bally bridges or equivalent; July 1, 1971.

Nepal

Chief Engineer, Roads Department, Babar Mahal, Kathmandu; Equipment

and vehicles for highway maintenance programme; July 15, 1971.

Papua and New Guinea

Administration of the Territory of Papua and New Guinea, Papua; Corrugated galvanised steel culverting; June 1, 1971.

Sudan

The Controller of Stores, Sudan Railways, Atbara; Rolled steel bearing plates; June 1, 1971.

Thailand

Purchase and Stores Department, Metropolitan Electricity Authority, 121 Chakraphet Road, Bangkok; Copper cable; June 7, 1971.

Turkey

Milli Egitim Bakanligi, Mesleki ve Teknik Ogretim Mustesarligi, Egitim Araclari ve Teknik Is Birligi, Genel Mudurlugu, Ankara; Physics instruction apparatus; May 31, 1971.

UAR

Telecommunications Organisation, P.O. Box 795, Cairo; paper tape rolls for telegraph machines; June 5, 1971.

Dyestuffs and Chemicals Co, Kafr El Dawar; Inorganic raw materials for manufacture of dyestuffs; June 1, 1971; Organic raw materials and intermediates for manufacture of dyestuffs; June 2, 1971; Press cakes for the manufacture of V-dyestuffs; June 3, 1971.

Zambia

The Secretary, Republic of Zambia, Central Supply and Tender Board, P.O. Box 1009, Lusaka; Post mortem and surgeons gloves; June 4, 1971.

Exporters may obtain the tender documents from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the Indian Export Service Bulletin dated May 1, 1971, issued by the Directorate of Commercial Publicity in the Ministry of Foreign Trade.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Announcement regarding the issue of 65,000 First Mortgage 8 per cent Subject to Tax Registered Debentures (1978-1983)

Persons interested are requested to apply for copies of the Prospectus and Application form from the Registered Office of the Company, Bankers to the Issue, Underwriters and Brokers mentioned below

THE ALUMINIUM INDUSTRIES LIMITED

(Incorporated as a Public Limited Company under the Travancore Companies Act (IX of 1914) and now governed by the Companies Act 1956)

Registered Office: No. 1, Ceramic Factory Road, Kundara (Kerala State)

HISTORY, BUSINESS AND OBJECTS OF ISSUE

The Company was incorporated under the Travancore Companies Act (IX of 1914) on 2nd January, 1946 and is now governed by the Companies Act, 1956. The Company obtained Certificate of Commencement of Business on 25th January, 1946 and has been carrying on business since then.

The Company established a factory at Kundara, Kerala State, in which the Company is carrying on the manufacture of electric conductors, in particular of A.C.S.R. and A.A.C. bare conductors, transmission line accessories and insulated aluminium conductors.

The Company has been steadily expanding the volume of its business as well as the various lines of manufacture.

Starting with the manufacture in its Kundara factory of bare conductors in 1950, the Company established in 1955 a Properzi Mill for the manufacture of aluminium rods at Kundara. The Company set up in 1957 another plant at Kundara for the manufacture of insulated aluminium cables.

In 1957, the Company established a factory for the manufacture of aluminium bare conductors and aluminium rods at Hirakud (Orissa State). The wire mill of this unit went into production in 1959 and the rod mill in 1960.

Plant and machinery for the manufacture of high tensile galvanised steel wire required for A.C.S.R. manufacture was set up at Kundara and it went into production in 1961.

At Hyderabad (Andhra Pradesh), a unit was installed and commissioned in 1964 to manufacture insulated aluminium cables. During the same year commercial production of SOLIDAL underground cable was established at Kundara.

The Company established a factory at Hyderabad (Andhra Pradesh), for manufacturing wire working machinery. This unit was set up in collaboration with Messrs. Miyazaki Iron Works Ltd., Japan, and was commissioned in 1969.

In collaboration with Messrs. Delle Alsthom of France, the Company set up a unit at Mannar for the manufacture of Switchgear equipment. This was commissioned in 1970.

This Debenture Issue is being made not for the purpose of financing any new expansion scheme of the Company, but for the purpose of meeting repayment obligations partly of medium-term loans and fixed deposits and for the repayment of the residue (Rs. 13 lakhs) of an earlier Debenture Issue of Rs. 45 lakhs, that falls due for amortisation in the year and for augmenting the Company's working funds.

The net profit, after depreciation, dropped to Rs 10 lakhs from Rs 57 lakhs. However, the ordinary dividend has been maintained at 12 per cent.

The company's gross profit margin works out to 5.7 per cent against 8.6 per

cent. The ratio of net profit to net worth comes to 2 per cent (10.2 per cent).

In the year under review, operations at the company's collieries were hampered by several factors like the unprecedented wagon shortage which troubled the entire coal industry for the major part of the year, the widespread strikes in key sectors such as the railways, the steel plants, the power houses and explosives factories and by increased lawlessness together with acts of violence throughout the coalfields. However, production and despatches at the collieries worked by the company were affected by only 3.4 per cent and 6.2 per cent, respectively, as compared with 6 per cent and 10 per cent for the industry as a whole. Similarly, stocks at the company's collieries at the close of the year represented 26 days' production as compared with about 55 days for the industry.

During the year the net additions to block amounted to Rs 32.48 lakhs (Rs 41.23 lakhs). The major part of the capital expenditure incurred was in connection with the Trans Adjai project at Girimint colliery for winning Poniat seam coal and on modification of the screening plant at Murulidih colliery. In addition, expenditure has also been incurred on the opening out and the development of the Mohuda top seam of this colliery from which coal production has since started.

Raipur Manufacturing

WITH higher sales for the year ended December 31, 1970 at Rs 5.4 crores against Rs 4.3 crores in the previous year, the gross profit of the Raipur Mfg Co Ltd (Chairman: Miss Lilavati Lalbhai,

Ahmedabad) rose to Rs 67 lakhs from Rs 54 lakhs. The net profit, after depreciation and taxation, amounted to Rs 30 lakhs (Rs 13 lakhs). The ordinary dividend was 16 per cent (24 per cent). This is payable on the increased capital. During the year under review the ordinary subscribed capital of the company was raised to Rs 75 lakhs from Rs 50 lakhs by issue of bonus shares.

The company's gross profit margin works out to 12.5 per cent against 12.4 per cent. The ratio of net profit to net worth comes to 13.5 per cent (8 per cent).

In the year under review the company has done well in spite of increases in the prices of cotton, colours, chemicals and dearness allowance. Export for the year amounted to Rs 10.99 lakhs (Rs 7.69 lakhs). The Government of India had already issued a letter of intent in favour of the company for setting up a plant for the manufacture of fine china crockery to the

tune of 1,800 tons per annum. The collaboration agreement with Porzellanfabrik Langenthal AG, Langenthal, Switzerland, has been approved by the Central Government. The company has applied to the Government for industrial licence. An application for the import of machinery has also been submitted to the Government and the necessary import licence will be issued after the industrial licence has been given to the company. The existing ceramic factory has not yet become profitable due to high cost of fuel, raw materials and wages.

As a part of reorganisation and renovation programme the company has incurred a capital expenditure of Rs 33 lakhs. The main items include two suction looms for cards, 26 NMM/Rup/automatic units and two size pressure cookers. The installed capacity of the mills is 45,484 spindles, 6,780 doubling spindles and 800

looms including 210 automatic looms with complete dyeing, bleaching, roller printing plants and physical and chemical testing laboratory. □

Devkaran Nanjee Insurance

The gross direct premium income of all the departments of Devkaran Nanjee Insurance Co Ltd, Bombay, for the year ended December 31, 1970 has increased to Rs 83.26 lakhs from Rs 65.85 lakhs in the previous year. The net fire premium written during the year was Rs 35.55 lakhs (Rs 28.51 lakhs). The net premium of miscellaneous department rose to Rs 15.25 lakhs from Rs 10.78 lakhs. The total net premium of all the departments amounted to Rs 53.05 lakhs (Rs 40.71 lakhs). After providing for the full gratuity liability of Rs 3.75 lakhs and an additional investment reserve and also for taxation liability, the net profit came to Rs 3.94 lakhs. The directors have proposed a final dividend of 14 per cent which together with the interim dividend of 8 per cent amounts to 22 per cent against 20 per cent for the previous years. An amount of Rs 2 lakhs has been transferred to the general reserve which now stands at Rs 5.90 lakhs.

Globe Auto Electricals

Sales of Globe Auto Electricals Ltd, Bombay, for the year ended December 31, 1970, have gone up to Rs 1.33 crores from Rs 1.06 crores in the previous year recording a rise of about 25 per cent. The net profit, after providing Rs 2.10 lakhs (Rs 1.98 lakhs) for depreciation amounted to Rs 4.31 lakhs (Rs 3.64 lakhs). The dividend has been maintained at 6 per cent. The profit would have been more but for the additional bonus burden for the years 1968 and 1969, totalling Rs 1.49 lakhs. The company is at present engaged in diversifying the range of its products to meet the rising needs of the country for tractors, trucks, jeeps, cars and scooters. An industrial licence for doubling the production has been received. Based on the successful completion of its expansion and diversification schemes, the company hopes to achieve a turnover of Rs 5 crores by the end of 1975.

Khandelwal Udyog

Turnover of Khandelwal Udyog Ltd, Bombay, for the year ended December 31, 1970 has spurted to Rs 101.13 lakhs from Rs 56.62 lakhs in the previous year. The net profit, after providing Rs 95,514 (Rs 94,519) for depreciation, amounted to Rs 12.20 lakhs (Rs 7.13 lakhs). The directors propose to declare dividend on 10 per cent redeemable cumulative preference shares for two years 1967 and 1968 after a lapse of about 4 years. After necessary adjustments, the accumulated losses are reduced to Rs 13.98 lakhs from Rs 21.61 lakhs. As on March 31, 1971 the order position exceeded Rs 1.20 crores (Rs 0.75 crores).

Hindustan Aluminium

Gross sales of Hindustan Aluminium Corporation Ltd, Bombay, for the year ended December 31, 1970 increased to Rs 50.68 crores from Rs 41.33 crores in the previous year. Excise duty paid in the year was Rs 10.86 crores (Rs 7.06 crores). The net profit, after providing Rs 3.82 crores (Rs 3.64 crores) for depreciation, amounted to Rs 9.75 crores (Rs 6.46 crores). The ordinary dividend has been stepped up

to 12½ per cent from 10 per cent. The development rebate absorbed Rs 0.33 crores (Rs 4 crores) while the general reserve got Rs 6.99 crores (Rs 2.46 crores). The net block of the company as on December 31, 1970 stood at Rs 35.25 crores (Rs 36.92 crores). Production of primary metal was 78,191 tonnes (72,231 tonnes) and that of fabricated products (proper rods, rolled products and extrusions) was 43,227 tonnes (35,010 tonnes).

During 1968 and 1969, 23,956 tonnes of metal were exported earning Rs 9.35 crores in foreign exchange. However, exports were banned in 1970 and thus only 2,499 tonnes of metal could be exported against prior commitments. The scheme for expansion of the company's production capacity up to 1.2 lakh tonnes was cleared last year and the first stage of the expansion programme, which is scheduled to raise the primary capacity to one lakh tonnes by the middle of 1972, has been taken on hand. The second phase of expansion to 1.2 lakh tonnes is scheduled to be completed by the end of 1973.

Industrial Development Bank

Operations of Industrial Development Bank of India, Bombay, during the nine months from July 1970 to March 1971 showed considerable increase as compared to the corresponding period in the previous year. Total gross sanctions rose to Rs 80.9 crores from Rs 43.5 crores recording an increase of 86 per cent and disbursements increased to Rs 52 crores from Rs 32.7 crores showing a rise of 59 per cent. The bulk of the improvement in sanctions during the nine-month period was brought about by sharp increases under direct loans (other than for exports), refinance of industrial loans and refinance of export credits. Such assistance aggregated Rs 52.4 crores, which was more than treble the assistance sanctioned in the corresponding period of 1969-70. Direct assistance to industrial concerns (other than for exports) including underwriting of shares and debentures etc aggregated Rs 24.7 crores in respect of 25 projects. Sanctions under export finance aggregated Rs 17 crores (Rs 6.1 crores). Allowing for the inflow of funds from re-

payments of assistance disbursed earlier as well as sales of investments, the net outgo of funds from the IDBI during the period was Rs 24.8 crores (Rs 11.5 crores).

Eastern Manufacturing

Sale of gunnies of the Eastern Manufacturing Co Ltd, Calcutta, for the year ended December 31, 1969 has declined to Rs 1.98 crores from Rs 2.16 crores in the previous year. After providing Rs 5.03 lakhs (Rs 4.69 lakhs) for depreciation, the company has suffered a loss of Rs 8.81 lakhs against a profit of Rs 98,132. The accounts for the year under review could not be finalised in time due to closure of company's head office for about three months from March 1970 to May 1970. The year 1969 was also another critical period in the history of the jute industry. Jute crop for the year under review was adversely affected by climatic conditions. Due to short jute crop, prices of raw jute were very high throughout the year. Thus, trading was unprofitable because of marked disparity between raw jute and finished goods prices. Again, in order to cope with the short jute

crop, the Government of India was forced to restrict raw jute purchase and production, as a result of which the company's mills could not work to its optimum capacity.

Saswad Mali Sugar

Total sales of the Saswad Mali Sugar Factory Ltd, Malinagar, Sholapur, for the year ended July 31, 1970 have increased to Rs 2.81 crores from Rs 2.30 crores in the previous year. The net profit, after providing Rs 5.02 lakhs (Rs 4.51 lakhs) for depreciation and Rs 4.30 lakhs (Rs 6.59 lakhs) for taxation, amounted to Rs 3.08 lakhs (Rs 3.87 lakhs). The ordinary dividend has been maintained at 6 per cent. During the year under review, cane crushed was 1.76 lakh tonnes (1.57 lakh tonnes). Sugar produced was 1.75 lakh bags (1.66 lakh bags). Average recovery was 9.92 per cent (10.63 per cent). An order has already been placed for a complete new plant of 1,250 tonnes capacity with Buckau Wolf New India Engineering Works Ltd, Pimpri. The cost of this new

plant is Rs 1.44 crores and an advance of Rs 26 lakhs has been paid towards the same. It was decided to transfer this new plant to the co-operative society, namely, the Saswad Mali Sahakari Sakhar Karhana Ltd and consequently the erection of the new plant is to be done by the said society at its own cost.

Preliminaries

Bharat Suryodaya

Total net sales and other receipts of the Bharat Suryodaya Mills Co Ltd, Ahmedabad, for the year ended December 31, 1970 increased to Rs 2.79 crores from Rs 2.67 crores in the previous year. The net profit, after providing Rs 6.89 lakhs (Rs 6.30 lakhs) for depreciation and Rs 1.33 lakhs (Rs 3.75 lakhs) for taxation, amounted to Rs 4.02 lakhs (Rs 12.26 lakhs). The ordinary dividend has been pruned to 12 per cent from 15 per cent. The development rebate reserve and the development and rehabilitation reserve absorbed Rs 1.30 lakhs (Rs 4.04 lakhs). The general reserve got Rs 2.75 lakhs (Rs 8.90 lakhs). The company proposes to issue bonus shares in the ratio of one ordinary share for every ten shares held. The issue is subject to the approval of the Government. The new ordinary shares, if issued, shall rank *pari passu* with existing ordinary shares from the date of issue and shall be entitled to receive dividends declared thereafter.

Interims

Blundell Eomite Paints

Sales of Blundell Eomite Paints Ltd, Bombay, for the six months ended December 31, 1970 amounted Rs 1.79 crores against Rs 1.48 crores for the corresponding period in the previous year. The pre-tax profit after providing Rs 3.51 lakhs (Rs 3.59 lakhs) for depreciation was Rs 9.88 lakhs (Rs 5.76 lakhs). For the first time, the company has declared an interim dividend of 4 per cent, payable on July 1, 1971 to those shareholders whose names are on the register of members on June 4, 1971. The dividend for the year ended June 30, 1970 was 10 per cent.

Company trends

Gujarat Agro-Industries Corp

The Gujarat Agro-Industries Corporation Ltd, Ahmedabad, recently set up its second subsidiary company, the Agro-Industries Oil Extractions Ltd. It will undertake the extraction of oil from rice bran and such other products. It will also investigate the possibilities of setting up modern rice mills at various places in Gujarat. The company's authorised capital is Rs 50 lakhs. The first subsidiary of the Corporation, Agro-Industries Cold Storages Ltd, has already set up two cold storages, one at Borlavi in Kaira district and the other at Deesa in Banaskantha district.

Subdued sentiment

BOMBAY, May 12

IRREGULAR price movement and quiet undertone marked trading on Dalal Street during the week under review. Business was restricted as operators were reluctant to enter into fresh commitments owing to the various prevailing uncertainties.

The proximity of the Union Budget, the uncertain political situation in Pakistan, the monetary crisis in European exchange markets and the pressure on the US dollar, all conspired to depress the sentiment, with the result that prices sagged over a broad front. Reports that the Government was keen to implement its socialistic programmes, including imposition of ceiling on urban property, and apprehensions of a rise in railway freight rates and passenger fares added to the subdued sentiment. Technical considerations also called for a cautious approach. Other stock markets were also in a reactionary phase. Bulls thought it prudent to lighten commitments and with buying support lacking, prices retreated sharply. The approach of the ten-day settlement on Thursday also induced caution.

However, the reluctance of bears to press sales on a quiet market, and the plethora of good corporate news prevented any sharp break. The guidelines approved by the Government for the conversion of loans into equity have been less harsh than was feared. The import policy has a distinct export bias, and is expected to meet the need-based requirements of private sector industry.

Corporate news remained encouraging. R.B. Motilal Poona Mills stepped up the dividend by four points to ten per cent for 1970, following excellent working. Camphor and Allied Products maintained the distribution on the increased capital. Bharat Commerce showed excellent results and declared a dividend of 12 per cent on the increased capital against 15 per cent. Jay Shree Tea stepped up the distribution to 11 per cent against 10 per cent on better sales and profits.

Textiles were subdued on the uncertain outlook for the industry in the current year. Century and Standard declined sharply. Kohinoor also was weak on tired bull unloading. National Rayon declined sharply as the board meeting to decide the dividend was again reported to be postponed.

Steels and engineering were shaded. Telco lost ground. In chemicals, Indian Dyestuff was subdued. Tata Chemicals was fairly steady. Premier Construction was a weak counter and declined sharply. Shippings were quiet, both Scindia and Great Eastern retreating. Cements and sugars were neglected. Cash shares were also affected by the decline in the cleared list and most popular scrips retreated in varying degrees.

Cotton down on poor inquiry

BOMBAY, May 5

A perceptible decline in prices was noticed in the cotton market during the last week in the wake of poor inquiries. While buyers were hard pressed to finance their cotton purchases, the sellers were rather keen in disposing of their goods. But the transactions remained thin both on account of financial limitations as also due to the absence of fairly good quality cotton with the sellers. As a consequence, the price-fall ranged from Rs 30 to Rs 150 per candy. Only isolated lots of Berar L 147 and Khandesh were able to maintain their previous week's levels.

Reports from upcountry centres also indicated that the spinners were waiting on the side-lines, anticipating a further fall in values, before making sporadic purchases. Reports that the Maharashtra Apex Co-

operative Marketing Federation is saddled with unsold stocks valued at Rs 1 crore also acted as a damper both in the local market as well as in Gujarat.

The following has been the trend of prices of some of the leading varieties:

		(Rs per candy)	
		For the week ended May 12	For the week ended May 5
Khandesh ..	..	2,100	2,100
Berar AK ..	..	2,100	2,100-2,150
Digvijay Dabhoi ..	..	2,881	2,951
Berar L. 147 ..	..	2,400	2,400
Manavdar Co. 2 ..	..	2,550	2,625
Kalyan 797 ..	..	1,980-2,045	2,075
Kala ..	..	1,500	1,650
Wagad ..	..	1,650	1,750

In the import section also limited interest was noticed, both in global and American cotton under PL 480, due to inhibitions provided by the credit curbs. In fact, Rs 5 crores worth of cotton is lying uncleared at the Bombay Docks. Meanwhile, there is speculation here whether some extra supplies of cotton could not be had from the United Arab Republic which is at present in dire need of rupees to correct the imbalance in trade between the two countries. An official delegation is presently in India to negotiate possibilities of adjustment in the bilateral trade agreement between India and UAR to help Egypt tide over the present crisis.

Total imports as on April 17 are placed at 2,10,389 bales against 4,67,988 bales. Egyptian cotton imports have amounted to only 40,895 bales against 53,476 bales.

In the export section, foreign inquiries for Bengal Deshi continued to be confined to stray choice lots. Cotton registered for exports, as on May 1, is placed at 1,48,368 bales against 1,90,794 bales.

YARNS DECLINE

BOMBAY, May 12

The trading activity in the yarns market was characterised by the decline in prices of yarns during the past week. The supplies in the market were larger than required to meet the waning demand. Nylon yarn prices were easy and staple yarn was subdued. Superior quality cotton yarn was slightly better.

In the art silk yarns section, 120D National Rayon lost 13 paise to Rs 18.74 per kg. However, 150D Bright Century gained 13 paise to Rs 16.60. Similarly, 150D National Rayon at Rs 16.95, recorded a rise of 42 paise. This improvement in the prices of 150 deniers was mainly due to short supply of this variety in relation to its demand. 100D Bright South India receded by 13 paise to Rs 22.05 during the past week. Staple fibre yarn (2 x 34 nF) Spot Kiran remained unchanged at Rs 11.29.

JUTE RECEDES

CALCUTTA, May 11

A steady decline in prices of both jute manufactures and raw jute was the characteristic feature last week. This followed Government's displeasure at the rising trend in prices as well as its earnestness to prevent any exploitation by bulls of the situation caused by the acute world shortage for jute goods as a result of stoppage of supplies from Bangla Desh.

The prospect of efforts to neutralise the shortage encouraged overseas buyers to desist from entering into forward commitments. On the heels of the announcement of the rise already announced by the India-UK-Continent Conference lines, a 5 per cent rise on gunny shipments has been decided upon, effective from July 1, by the East Coast of India/West Asia (Gulf) Conference lines.

During the last week, the volume of business concluded was more encouraging than the previous week, and the fall in quotations attracted more buyers. Business was transacted with East Africa, West Africa, Syria, the UK and Argentina. Good interest was also shown by buyers with commitments to export to River Plate destinations. B. twills slipped from Rs 267.50 to Rs 260.25 and hessian 40" 10 oz. from Rs 98.25 to Rs 93.50, but by the weak-end prices staged a partial recovery, to Rs 263 and Rs 94.50, respectively.

Excellent weather was again in evidence in jute districts with good sunshine after summary showers, and jute plants are growing "violently". The crop is not only expected to be a bumper one but an early one too. Holders continued to liquidate their inventories taking down Assam bottoms from Rs 59 to Rs 56.50 per maund, daissee bottoms from Rs 60.50 to Rs 58, and northern bottoms from Rs 57 to Rs 54.50.

OILSEEDS FIRM

BOMBAY, May 12

Oilseeds and oils showed firmness in the early part of the week on persistent bull support and nervous short-covering. Firm

Madras, Bombay, Calcutta, Delhi, Secunderabad and Coimbatore.

spot and upcountry advices aided the bullish tempo. There was sustained buying inquiry from crushers, millers and industrial users, and the paucity of supplies induced a hardening tendency. Both forward castor and linseed recorded good gains, while spot rates were also better.

Ready groundnut oil advanced despite the signing of a fresh agreement for import of vegetable oils under PL-480. However, as the week advanced, the tendency turned quiet and prices declined on lower upcountry advices.

In castor the arrivals were limited and prices advanced. Castor oil also improved owing to demand from shippers.

Linseeds were firm on poor arrivals. Bears preferred to cover in view of the rise in ready groundnut oil. Bulls too refrained from adding to their bullish position owing to margins being above Rs 155.

Activity in cakes was very limited. Export inquiries were poor, but prices were better in sympathy with the rise in seeds and oils.

Comparative prices in rupees were:

Item	5-5-1971	12-5-1971
Castor June ..	125.25	126.25
Linseeds July ..	164.00	155.25
G. Nuts Khandesh ..	183.00	182.00
G. Nut oil ..	41.60	41.00
Castor Madras Small ..	127.00	131.00
Castor Comm. oil ..	28.00	28.50
Castor B.S.S. oil ..	30.50	31.25
Linseeds Bold ..	152.00	151.00
Linseed oil ..	33.75	34.25

GOOD SUPPORT FOR TEA

CALCUTTA, May 11

Good support was the feature of last week's auctions held here. The weakening trend in London sales, where Assam teas came in for selective buying to push down the prices, was noted here with concern. Although the British per capita consumption is on the decline, the behaviour in the London auctions continues to influence the price trend elsewhere including Calcutta auctions. In other words, in the interests of the tea industry, it is necessary to put down re-exports from the UK. That the British tea trade is indifferent to efforts to arrest the declining per capita consumption in the UK is indicated in as much as the British Tea Council was quoted by the Ceylon Tea Propaganda Board as having effected a cut from the budget for promotional campaigns. In view of this, if London auctions' influence in determining the world trend is to be neutralised, producing countries must join and increase exports to European and other countries which have fortunately shown a rising per capita consumptional trend.

Leaf on offer during last week's export sale totalled 8,921 chests including 1,857 old chests. Demand was only fair, and generally an easing trend was recorded. While the few old season's teas sold well, all new teas eased. Thus Darjeelings were a weak feature with orthodox teas following suit, but the few bright liquoring fannings sold well. CTC brokens depreciated much, with fannings being neglected. No quotations were issued in view of the limited quantity on offer.

The internal sale had on offer 13,875 packages of dusts, which in contrast to the leaf sale met with a good general demand, though at lower prices. In CTCs, plainer ones and fibrous teas eased, but others were steady. Orthodox and legg-cut teas were sold at declining rates. The quotations per 1 kg inclusive of excise duty were: good Assam CTC dust Rs 6.50 to 6.90, medium CTC dust 6.10 to 6.40, plain CTC dust 5.30 to 5.80, plain orthodox dust 4.70 to 5.10, and medium Assam dust, legg-cut dust, and best Assam CTC dust—not quotable.

FOODGRAINS MOVE UP

BOMBAY, May 11

In the local foodgrains market, the prices of foodgrains generally moved up during the past week. In cereals, the prices of wheat (Pusa variety) declined by about Rs 2 to Rs 32-35 per quintal on account of heavy arrivals. Demand was also good. Daily arrivals of wheat were placed at 1,150 bags. In coarse grains, the prices of bajra

(superior) rose rather sharply by Rs 5 to Rs 60-70 per quintal owing to the poor inflow in the face of good demand. The prices of maize at Rs 63-64 per quintal showed a rise of Rs 3-4 on account of short supplies. Further, upcountry advices were encouraging. In pulses, the prices of gram (Punjab) also moved up by Rs 3 to Rs 85-86 per quintal on account of poor arrivals. The prices of urad (Khandesh New) at Rs 148-152 per quintal showed no change. The prices of tur (Berar White) spurted by Rs 5 to Rs 115-117 per quintal due to the heavy demand in the face of lower arrivals. The prices of moong (Chinal) firmed up sharply by Rs 10 to Rs 230-260 per quintal. This rise was attributed to heavy demand and encouraging advices from Gujarat and Rajasthan in the face of dwindling supplies.

SUGAR STEADY

BOMBAY, May 11

In the local sugar market, the prices of sugar (C-30) at Rs 194 per quintal remained steady during the past week. While the daily arrivals were 700 bags, the offtake was slightly higher at 800 bags. The sugar mills in the State were reluctant sellers. During the week, about 50,000 bags were sold by the co-operative sugar factories in Maharashtra at higher ex-mill rates, ranging from Rs 191 to Rs 195 and Rs 192 to Rs 197 per quintal for D-30 and C-30 grades respectively.

EASY TREND IN FOODGRAINS

HAPUR, May 10

A quiet to easy trend was witnessed in foodgrain prices during the past week. Pressure of arrivals of new produce in the market, coupled with restricted banking facilities to stockists were the main governing factors. Threshing and winnowing operations have been hampered in the later part of the week due to inclement weather but no substantial damage to the crop has been reported in this area. A bumper wheat rabi crop has been reported. Daily arrivals which had mounted to an average of 12,000 maunds in the earlier part of the week shrunk to 7,000 maunds due to adverse weather.

Wheat average is now quoted at Rs 72.50 to Rs 75 and superior farm at Rs 77.50 to Rs 80 per quintal and red Mexican variety is being traded at around Rs 70 a quintal.

INCREASED DEMAND FOR SUGAR

HAPUR, May 11

Sugar prices displayed a steady trend during the past week on increased demand for the marriage season and summer requirements. Inquiries were also reported from Punjab and Haryana and mills were reported hesitant sellers. The sugar production season is gradually coming to a close and week-end prices were: Rs 178 to Rs 180 per bag for inferior and Rs 190 to Rs 194 for superior variety. Mill delivery prices for some of the varieties were:—B 30 Mansurpur Daurala Rs 200, Iqbalpur Khatauli Rohana Rs 199, Lhaksar and Shamli Rs 198, C 30 Deoband Rs 197, C 29 Meerut Rs 181.50, Amroha Rs 179, E 29 Simbhauli Rs 185, Bulandshar Rs 181.

METALS WEAK

CALCUTTA, May 11

Satisfaction with the new import policy, which promises the availability of adequate supply of scarce industrial raw materials, including base metals such as copper and zinc, was reflected in last week's trend in the base metal market where prices of scrap eased. The easing was recorded despite the tight supply position of these scraps and the reserve displayed by holders from responding to offers. The continued fall in the world quotation for copper was also a stimulant to encourage industrial consumers to be content with finding their day-to-day requirements of non-ferrous scrap only. On the London Metal Exchange, continuing the drift, copper wire-bar in the last week touched a new low of £476 since the settling in of the recent recovery. The down-trend was precipitated by heavy liquidation in the New York market, where the price fell from 53.10

cents per lb to 52.30. By the week-end, however, the LME price recovered to £484.50.

An uncertainty that loomed large was the doubt whether the Copper Control Order recently issued by the Government of India applied to the non-ferrous semi-manufacturing industry also. Although urgent clarification has already been sought from the proper authority, it was thought here that the Order would not apply when once the Minerals and Metals Trading Corporation, the sole importer and distributor of scarce metals, made over the supply of copper to producers. There was apparently dissatisfaction among the industry circles in the provision in the Control Order empowering the police to search. In the absence of technical knowledge on the part of the police, this provision, it was thought, would only lead to the embittering of the relations between Government and manufacturers.

In subdued activity, clean copper wire scrap eased from Rs 1,430 to Rs 1,400 per 100 kgs. mixed scrap from Rs 1,370 to Rs 1,350 and utensil scrap from Rs 1,390 to Rs 1,360. Alloy-makers were in no hurry to enter the market, and this was evident from the fall in honey quality brass scrap from Rs 1,015 to Rs 1,000 and brass sheet cutting scrap from Rs 1,030 to Rs 1,000. It was realised in the market that the Copper Control Order is aimed to raise the consumption of aluminium by cable manufacturers and thus save copper for industrial purposes. Thanks to larger imports, the MMTC has announced a small reduction in the price of copper, zinc, tin and lead for the present quarter. The improvement in supplies caused zinc, lead and tin to remain unchanged at Rs 470, Rs 455 and Rs 4,800.

KIPS STEADY

MADRAS, May 8

There was no appreciable change in the local or foreign markets. Inquiries were steady and as prices were held firm at both ends volume of business placed was not appreciable. Importers were finding Madras price levels uneconomical. Demand for tanned cow hides inferior fifths grade in light and medium weights was sustained and sellers were reserved due to well sold forward position. Top marks in cow calf better selections were in request, with no sellers. Buff calf ruled quiet.

Due to high prices quoted, traditional buyers of goat skins slowed down their inquiries. The prime sheep skins market was also dull for similar reason. Wool sheep skins suitable for suede selection had good call but stocks were not available. Market sheep ruled firm, due to poor arrivals.

SILVER EASY, GOLD DEAR

BOMBAY, May 12

Gold prices reached a new all-time peak on the Bombay bullion market during the past week. The firmness was due to the tight supply position and the rising trend of gold in the international markets. The recent crisis in the West European exchange markets had also its influence. Silver, however, showed an easy trend in the absence of any buying activity. Rumours of arrival of smuggled silver from Pakistan and Nepal kept buyers away from the markets.

Silver .996 fineness, which opened at Rs 596 in the beginning of the week, closed at Rs 585.75 losing Rs 10.25 over the week. Primary gold opened at Rs 189 and went up to Rs 192 to close at Rs 190 gaining a rupee. Standard gold started at Rs 199 and closed at Rs 203, gaining Rs 4 over the week. Sovereign was steady at Rs 174.

MONEY STRINGENT

BOMBAY, May 12

Stringent conditions continued to prevail in Bombay's short-term money market in the past week. The call rate ruled at 6 per cent. In Calcutta all renewals were effected at 5½ per cent.

Ninety-one day's Government of India treasury bills sold from May 3 to 8 amounted to Rs 35.81 crores against Rs 11.76 crores in the previous week.

During the week ended April 30, foreign exchange reserves of the Reserve Bank of India increased by Rs 1.86 crores to Rs 369.19

crores, while foreign securities remained unchanged at Rs 293.42 crores, balances held abroad rose to Rs 75.77 crores from Rs 73.91 crores. Notes in circulation declined by Rs 12.65 crores to Rs 4,330.95 crores.

The week ended April 30 recorded a decline of Rs 40.23 crores at Rs 4,659.03 crores in the total credit made available by scheduled commercial banks. Aggregate deposits came down by Rs 5.43 crores to Rs 5,971.84 crores. Borrowings from Reserve Bank were lower at Rs 190.68 crores (Rs 195.84 crores).

JAY SHREE TEA & INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Shareholders of this Company will be held on 25th June, 1971 at 3-30 p.m. at Hotel Hindustan International, 235/1, Acharya Jagadish Bose Road, Calcutta and its agenda has been/will be duly circulated to all the Members of the Company in time

along with the relevant explanatory statement thereon.

NOTICE is also hereby given that if due to lack of quorum the above meeting stands adjourned for a week to be held at the same time as provided for in Section 174(4) of the Companies Act, 1956, the adjourned meeting will take place at the Head Office of the Company at New Link Road, Jhandewalan Extn., New Delhi-55.

The Equity Share Transfer Registers (Registers of Members) will remain closed from 15th June, 1971 to 25th June, 1971 both days inclusive for the purpose of payment of dividend.

By Order of the Board,

For JAY SHREE TEA & INDUSTRIES LIMITED,

B. P. KEDIA
President.

Registered Office:

"INDUSTRY HOUSE"
10, CAMAC STREET,
CALCUTTA-17.

Dated, the 6th May, 1971.

*A dream
today,
a reality
tomorrow*

Today at Mithapur, young India, conscious of the past, urged on by the present, confidently dreams of a glorious tomorrow.

Their immediate dream is of a new complex—massive, self-sustaining, long-range and innovative—harnessing the sea, the sun and ultimately the atom to banish hunger from their land and to generate greater economic self-sufficiency, more and more independence.

There is a beginning but there is no end to the work of bringing purposeful prosperity to the people of India. Harness the sea, the sun, the atom and from Okhamandal—the land of salt—fertility will flow to the entire country.

V.I.P.'S stop here so very often !

Because we care for their moods, and hunches, and whims.

And we know they like red carpet - which is exactly
what they get.

And, of course, they go for that elusive something called
atmosphere - which is everywhere in Rajdoot.

And, before they are gone, we like them to taste the
wonderful Indian and Western cuisines, the variety
programmes in the ELDORADO and STARLIT Restaurants
or an open air session at RAMBLE Connaught Place.

We have a telephone in each room, and its own
thermostat control.

What's more, we don't treat them as come-and-go
guys; but like real house guests!

Take-over of general insurance

WITH the take-over of general insurance the Government has acquired a larger hold over the liquid resources of the community. The success or failure of the step will be judged in terms of how these liquid assets are managed both in the interests of policyholders and of the economy as a whole. The decision to nationalise general insurance had to be kept secret till the time of its announcement. This might be responsible for some dislocation in the normal working of the general insurance companies. A further complication seems to have arisen because of the reported unwillingness of some of the persons chosen as custodians of the companies to accept the responsibility. This might explain the delay in announcing the full list of custodians.

Mr Y. B. Chavan, Union Finance Minister, defended the decision of the Government on the ground that it was part of the measures to fulfil the pledges made in the election manifesto by the Ruling Congress party. It has been suggested in some quarters that there were many other promises contained in the same manifesto which ought to have been given priority. The task of making a success of bank nationalisation, creating more job opportunities, increasing exports and so on, should have been tackled first, it is argued. It cannot, however, be said that the Government formed after the recent elections to the Lok Sabha is indifferent to these tasks. A few measures have already been taken and more might be announced during the budget session of Parliament. The point to

be considered, however, is whether the take-over of general insurance would help in securing the broad socio-economic goals of the present administration. Mr Chavan has not much to say on this aspect of the question. The only advantage he could find in what he described as an important step in the implementation of the mandate of the people was that it would reduce the outgo of foreign exchange. This would be achieved to some extent because it would be possible now for the Government to spread the risk more evenly among the various general insurance companies and that might not necessitate the same amount of reinsurance with the foreign companies as before. This, however, cannot be a justification for the Government to take over the onerous responsibilities involved in general insurance. It is estimated that the foreign outgo on this count was on an average not more than Rs 5 crores per year. There is also some truth in the argument that in cases of big risks, particularly those involving ships and aircraft, reinsurance of the risk abroad cannot be altogether avoided.

It is not possible to justify the decision to nationalise the general insurance on the ground of any significant contribution to the public exchequer either. The profits of these companies were on an average Rs 3.75 crores a year. If one takes into consideration the amounts to be paid by way of compensation to the owners of the existing companies the accrual to public exchequer would be only marginal. The total assets of the general insurance companies are

estimated at Rs 240 crores. The return on the assets, therefore, works out to barely 1 per cent. In this connection it is also pointed out by the critics of the Government decision that as late as in 1967 the Government had come to the conclusion that the nationalisation of general insurance business was not a profitable proposition. When Mr Chavan was reminded of it his only explanation was that 1971 was not 1967. This by itself does not explain much and does invite the charge that the decision was political.

Perhaps the present decision is sought to be justified on the ground that it was necessary from the point of view of enabling the public sector to attain a dominant role and to occupy a key position in the economy. This was the ground on which Mrs Gandhi had defended the nationalisation of banks. Perhaps the same could be said of general insurance because it does help the Government to get a command over the cash assets of something like Rs 40 crores. It could also be argued that with the control over general insurance it would be possible for the Government to expand this business so as to make its benefits available to the common man. Of late the Life Insurance Corporation is moving in the direction of bringing within its net more and more people. With proper management the same approach could be tried in general insurance too. More and more Indians are exposed to the hazards inherent in the modern ways of living. Old traditions and institutional arrangements are breaking down without being replaced by new forms of insurance. With the development of the economy and especially of agriculture it should be possible to extend the principle of insurance to more families and the nationalisation would be justified only if a definite step in this direction was made possible thereby.

Much will depend upon the organisational set-up of the nationalised general insurance. The details of this set-up will be dealt with by the proposed bill vesting the ownership of the undertakings in the Government. The present thinking is to have four corporations. They will be competing with each other for business all over India. This is a wise decision because the LIC set-up is criticised on the ground that it has become a monolithic organisation. The nature of general insurance demands that authority should be delegated to the people on the spot. In this line much discrimination has to be used and decisions have to be taken from day to day. The spread of the risk has to be continuously kept in mind and a decentralised set-up is more suited for this purpose. It is also worth considering the desirability of permitting these corporations in the public sector to write life insurance business. That would help in spreading the risk and enlarging the scope of work of the corporation.

Politics of backwardness

EVERY backward region has a seemingly legitimate grouse that it has been neglected. In Telengana this grievance got a sharper edge after the Bhargava Committee worked out with a fair semblance of plausibility the amount which was owing to Telengana as its share of Plan outlays in the preceding years. The Committee suggested that this amount should be made available for accelerated development of the Telengana districts. Indirectly it accepted the argument that Telengana had not got a fair share of the general development outlays in Andhra Pradesh. This is how a little over Rs 1 crore was made available additionally in 1968-69. In order to make good past neglect, about Rs 43 crores are to be provided similarly over the Fourth Plan period 1969-74. In all about Rs 45 crores of developmental funds would thus become available to the Telengana districts in addition to what would have been available in the normal course of Plan expenditure. For Telengana's grievances about backwardness, a remedy has been found. However, to the extent that the grievances were imaginary, this arrangement was not liked by politicians who exploited them for whipping up agitation.

Now that the Andhra Pradesh Chief Minister has declared that the Telengana region will get 36 per cent of the total Plan outlay of

the State as against about 35 per cent to which it would be entitled on the basis of population, the genuine grievances should wear off. Yet the danger of separatism looms large. As a further step to meet popular demand for progress, as also to placate political diehards, the Telengana Development Review Committee under the guidance of the Prime Minister suggested last week that out of the total special provision of Rs 10 crores for all the backward districts of Andhra Pradesh, those in Telengana should get one half. This is more than fair, for the backward districts of Rayalaseema and the coastal areas contain much more than 50 per cent of the total population of all the backward districts in the State. No one can now complain that Telengana is being neglected.

Now that the Government of India provides each year special assistance for Telengana so that the Bhargava Committee's recommendations on the use of the Telengana surplus can be implemented without delay, progress in Telengana does not mean any burden or deprivation for the rest of the State. In fact, funds are now available in more than an adequate measure. Unfortunately neither the State Government nor the Telengana leaders have yet made a proper assessment of the region's developmental potentialities. It is easy to talk vaguely of rural electrification or irrigation. To get the schemes off the ground takes much greater effort. The Government has to draw up the schemes on the basis of scientific investigation and implement development programmes according to a time schedule and within the estimated costs. As in most other States, Andhra Pradesh has still to draw up district development programmes based on a thorough study of the local development possibilities and to integrate them with the development Plan of the State. The fact is that the State has money, but not enough well-thought-out schemes. It is for this reason that programmes for the development of roads, irrigation facilities, soil conservation and rural electrification have been lagging behind in Telengana.

It is difficult, otherwise, to explain the shortfalls in expenditure. Out of about Rs 12 crores advanced by New Delhi during 1969-70 for faster development of Telengana, no more than Rs 9 crores were spent. The picture last year was worse, with substantial shortfalls in the outlay of Rs 10 crores. It is because of the poor performance of the past two years that a realistic provision of Rs 9 crores has been made for the implementation of the special developmental programmes in 1971-72. There is little hope, however, that this money also will be fully and effectively spent. On the rural electrification schemes there seems to have been savings amounting to Rs 2 crores out of Rs 4 crores in 1969-70 and of Rs 1 crore out of Rs 3 crores advanced in 1970-71. Last year the financial performance in relation to construction of roads and provision of protected water supply to villages was no better than 33 per cent, and the physical achievements were even lower than one-third of what was aimed at. In the extension of the high-yielding varieties, in providing plant protection and in constructing tube-wells, progress has been disappointing. At this pedestrian pace of implementation of Plan schemes, there is no prospect of Telengana making up lost time in the developmental process.

The lack of progress in Telengana should open the eyes of those who believe that finance is the biggest constraint on development. What obviously is missing is a sense of urgency and a lack of will. The administration has to show the drive required to organise and manage development at various levels. Short-cuts like the appointment of an additional Chief Secretary, dear as much to bureaucrats in Hyderabad as in New Delhi, will not help. Developmental administration needs to be strengthened all along the line, especially at the village level. It needs a determined lead so that the developmental tasks are completed on schedule. Perhaps there is no popular upsurge in favour of development as there was in support of a separate State. This shows how difficult it is to mobilise public opinion and to gear up the administration for the unspectacular and arduous tasks in agriculture, industry, road construction and the like.

"WE businessmen have grasped the economic implications of political stability in India. We hope our Government does". I was startled when a Japanese business leader made this remark to me. This was an extraordinary statement in a country where Government and business community march in step with military discipline.

During my recent visit to Tokyo I asked a leader of the powerful Japanese Federation of Economic Organisation (KEIDANREN) whether Japanese chambers of commerce issued any public statement against Government policy. He promptly replied: "Never. Government and the business community work in unison. From junior officials to top officials and Ministers we are having constant consultation in numerous committees and sub-committees of chambers of commerce and also of the Government". How is it that despite such close consultations some of the Japanese business leaders find the Government slightly out of step with them in so far as India is concerned? It is my impression that Japan's Foreign Ministry might be a restraining factor in taking bold steps to develop India-Japan ties. Japanese Foreign Office is too much obsessed with security considerations and in the military equation, India is obviously not a significant factor. But the Japanese business leaders see in India's growth an alluring opportunity to develop a steady source of semi-finished goods, raw materials and even agricultural produce. Japanese industry has also realised that India with her newly developed expertise in engineering industry could be a good partner in its exports to third countries.

The divergence of views between Government officials and the business community on Japan's future economic ties with India was dramatically highlighted when Mitsubishi decided at the instance of Indian Ambassador, V. H. Coelho, to send a high-power 11-member mission to India last month. I heard in Tokyo that a foreign office official rang up a senior executive of Mitsubishi and asked in a tone of surprise: "Are you sending a delegation to India?" However, when the executive replied in the affirmative, the official said: "It is a good idea. Do go and please find out what are the possibilities of developing ties with India". I was also told that the foreign office later liked the idea of Mitsubishi sending a delegation to India. But the fact remains that it was a leading business house of Japan, and not the Government leaders, who took the initiative to stir the near stagnant waters of Indo-Japanese economic relations.

The lack of enthusiasm of the Japanese Government officials in regard to India could also be traced to the inapt handling of aid negotiations by our officials. I think, almost every year the problem arises about debt re-scheduling. There is a proverb in Gujarati: "If you go out to beg, why be ashamed of the begging bowl?" The tragedy is that we go out to beg in the wide world, but keep up appearances of not doing so. Our officials tell the officials of Japan: "We do not want to tell you what to do. If you want to re-schedule, re-schedule our debt." We should not seek a favour in a tone which hurts a friend. Let us call a spade a spade. In doing so we will not only get things done by our foreign friends to our satisfaction but we will also raise our own moral stature.

True, there has been a startling improvement in our balance of trade and our exports are rising. Our embassies should constantly educate the members of the Aid-India Club about the structural changes that are taking place in our industry and foreign trade. But at the same time we should not pretend that we do not need temporary accommodation. That these accommodations are in the interests of growth ought to be emphasised. But till we develop the exhilarating self-reliance of Mao's China, let us not have the worst of both the worlds. This is all the more necessary when the mood of Japanese business and banking circles is decidedly changing in favour of India.

Admittedly, this is motivated by self-interest. But this in my view is a heartening development. Only that which is motivated by self-interest lasts longer. A developing labour shortage, rising wages, gradual disappearance of small-scale industry, a countrywide anti-pollution movement (which has paralysed the initiative of the industrial leaders of Japan) and a growing desire to put their trade eggs into more baskets have prompted the Japanese business houses to explore the possibilities of boldly extending the scope of economic co-operation with India. The rich raw material resources of India, availability of relatively low-cost skilled labour, the facility of modern infrastructure, the recent rapid development of engineering industry and a competent bureaucratic apparatus (a Japanese businessman told me: I know about your red-tapism; nevertheless, but for your efficient bureaucracy you could not have developed India so fast without weakening political unity) have attracted Japanese entrepreneurs towards India. The compulsion of establishing a firm foothold in the Indian market became particularly overwhelming after the sweeping victory of Mrs Indira Gandhi at the March mid-term poll which has ensured continuous political stability in India. The Japanese business and banking community seem to feel: "We now do business with India in a climate of stability". The growing protectionism in the US and the recessionary conditions in the US as well as in Japan are other important factors which have turned the face of the Japanese leaders towards India.

I think Japanese business leaders and bankers are just not interested in the outdated foreign policy differences between New Delhi and Tokyo. With the amazing US overtures to China and the incredible flexibility of China's foreign policy which expressed itself in the invitation to American ping pong players, the old foreign policy assumptions have lost their relevance. Japanese industrial leaders would, therefore, like to take as bold and flexible an approach towards India as President Nixon has taken towards the most dreaded enemy of the United States—Communist China. Not that the Japanese industrial leaders have no complaints about India. The business community of Japan was also initially alarmed at the nationalisation of banks in July 1969. They are con-

INDIA AND JAPAN

The mood is changing

By Vadilal Dagli

cerned over India's bureaucratic red-tapism, delay in obtaining industrial raw materials and spare parts, a high rate of taxation on royalty and certain import restrictions (which, of all the people, the Japanese understand but do not like at the present stage of their economic growth.) The Japanese were particularly dismayed at the signs of political instability in India, which was symbolised in the minority Government that Mrs Gandhi led with the support of the pro-Soviet Communist Party of India. But after the mid-term poll of March 1971, the political climate in India has so dramatically changed that the shrewd Japanese business leaders think it is too good to let it pass.

On the whole, Japanese industrialists seem to be satisfied with the working of joint ventures in India. This was rather forcefully impressed on me by Mr Keizoo Tamaki, Vice-President of Toshiba, who said that their two joint ventures—Toshiba Anand Lamps and Toshiba Anand Batteries in Angamali and Cochin in Kerala—were doing very well. Toshiba incidentally has also established an office in New Delhi to explore possibilities of further extension of their activities in India.

What sort of economic co-operation does Japan envisage with India in the seventies? Mr Chujiro Fujino, President of Mitsubishi Shiji Kaisha Ltd, told me at the headquarters of the Japan Chamber of Commerce and Industry in Tokyo, that they would like to improve the productivity of labour-intensive and light engineering industries of India. If this is done, Japan and India could complement each other both in regard to Indo-Japanese trade and export to third countries. Mr Fujino particularly referred to bicycle, sewing machine and electrical equipment industries in India which could be developed further with Japanese technical know-how.

Japan has decided to trade with China on the Chinese terms. These include "no business relations with either Taiwan or South Korea". With the gradual withdrawal of Japan from Taiwan and South Korea, Japan should find another outlet for her technological expertise and overflowing foreign exchange reserves. Before the visit of Mitsubishi delegation three Japanese delegations visited India during the past six months to study the possibility of enlarging the area of economic co-operation between the two countries. The visit of the Japanese Chemical Industry Co-operation Mission, the Sewing Machines and Ancillary Industries Mission and the Bicycle Industry Mission to India convinced Japanese industrial leaders that the technological level in India was so high that import of parts and components from India for Japanese engineering industry would be worth while from every point of view. These reports have reached the Japanese bankers also. Had it not been so, a leading Japanese banker would not have greeted me with these words: "You have come at a time when Indo-Japanese relationship is undergoing an imperceptible change for the better". □

MARKET GOSSIP

Budget: What is in store?

TO the general public, the most interesting part of a budget is the package of measures that may be proposed by the Finance Minister to bridge the budgetary gap. The magnitude of the gap decides, to a considerable extent, the character of the budget proposals. The interim budget presented at the end of March showed an overall deficit of Rs 240 crores. But the gap, by which Mr Chavan will be guided at the time of presenting the regular budget on the 28th of this month, is likely to be larger than this. There are so many pluses and minuses to this figure that it is impossible to prognosticate the budgetary gap.

Though in the interim budget the Central Government outlay for the Annual Plan 1971-72 is the same as in the preceding year, Mr Chavan had declared that in the final budget there would be a substantial step-up in the Annual Plan outlay. Whatever the step-up, it would directly add to the magnitude of the deficit.

Secondly, the overall deficits of the State Government budgets for 1971-72 add up to Rs 250 crores. The State Governments have, at least for the time being, assumed that a large part of this gap would be filled up by the additional transfer of resources from the Central Government. To that extent the Central Government deficit would be larger than envisaged in March.

Thirdly, there is the additional fiscal burden as a result of the refugee influx from Bangla Desh. For the current fiscal year, it may add up to Rs 300 crores. One hopes that this burden will be taken up entirely by the international relief organisations. But to the extent that they fail to discharge their responsibility, India will have to shoulder the residual burden.

Given the size of the budgetary gap, the first crucial decision which the Finance Minister has to make is as regards the pattern of resources. How much of the required resources should be raised through increases in taxes and prices of the services of the public sector enterprises (increase in railway freights and fares and in postal charges) and how much through deficit financing? This would be the first budget of the new Government after the general election. One can, therefore, expect the Government to be guided by the important consideration that, of the normal five budgets of its term, this is the budget which can be made relatively harsh. Correspondingly, deficit financing would be kept low in the initial budgets and larger in the subsequent budgets. But the deficit this time is likely to be so large that the Finance Minister may perhaps be tempted to draw heavily on both these types of resources, i.e., taxes as well as deficit financing. The temptation to go in for a heavy dose of deficit financing may be stronger because the price situation now appears to be less disturbing than it was a few months ago.

Turning to the specifics, one may hazard a broad guess. In view of the dis-

appointing pace of industrial expansion, there may be quite a few incentives to promote industrial expansion, with particular emphasis on encouragement of exports and of smaller enterprises. There may also be further change-over from specific duties to *ad valorem* on a few more items. Finally, there may be some heavier indirect taxes on luxury goods to serve the double purpose of augmenting the budgetary resources and social justice.

Meanwhile, the possibility of a large dose of taxation has made the markets more cautious. It is believed that the excise component in the new taxation proposals is likely to be of the order of about 75 to 80 per cent. About a dozen items are expected to attract excise duty for the first time. The major yield from the excise duties is likely to come from increases in the rates on about 25 to 30 items. Among the items mentioned in market circles are: refrigeration and airconditioning equipment, household appliances which work on power, costly steel furniture, high power electric motors and machine tools. According to them, man-made fibres and synthetic textiles may also attract higher rates of excise duty. In view of the Government's policy to cut down the import of certain items, the possibility of higher import duties being levied on items which the public sector undertaking have started production is mentioned. In this connection, the product lists of Hindustan Organic Chemicals and Indian Drugs and Pharmaceuticals are being scanned in the chemical sector to locate the items which may come in for heavier import duties. With the developments in Bangla Desh, the export possibilities of jute have increased. Hence the reduction in export duty, effected a year ago, is likely to be reconsidered by the authorities. This includes jute canvas and jute tarpaulin cloth. In the case of petroleum products, increase in excise duty is expected. As regards corporate taxation, marketmen are hoping that any additional burden that may be imposed on the companies will not be severe. The possibility of a bearish impact on the share market is considered rather remote because of the possibility of the Government giving incentives for more production and savings. □

Consequences of take-over

THE Government took over last week the management of 64 Indian and 42 foreign insurance companies with gross assets of about Rs 240 crores. Though the ruling party's commitment to nationalisation of general insurance was known, the timing of the event did cause surprise in market circles. If the share values in the stock markets did not receive a serious setback it was because industry had reconciled itself to the idea that the time was not far off when general insurance would cease to remain in the private sector. However, so far as insurance shares were concerned, there was a fall following the announcement. In the case of New India Assurance, the shares slumped from Rs 49.25 cum-dividend to Rs 39 ex-dividend in the wake

of doubts over the distribution of the Rs 6 gross dividend for 1970.

What will be the consequences of the take-over of the management which forms the first stage of nationalisation of the general insurance business? Industrial circles are doubtful if the quality of service will be maintained. The experience of banking services after nationalisation has been rather discouraging. The cost of bank credit has gone up, while there are delays in collections of cheques particularly from outstations. It is feared that many of the services which industry availed of from the insurance sector may be adversely affected. The insurance companies were rendering a useful service to the industry by guaranteeing the non-banking deposits placed with them. Because of the reduced availability of bank credit, industry turned to other sources. Industrial circles are afraid that if the nationalised insurance companies or corporations do not come forward to give the necessary guarantees their resources position may be affected. They want that with more sophistication in the economy the nationalised insurance agencies should devise new risk covers as are available to their counterparts.

A proposal to reduce the fire rates by 10 to 20 per cent was mooted some time ago. Will this be implemented? A section of the industry is inclined to believe that there might be a symbolic cut in the fire rates accompanied by increases in other rates, for instance, motor insurance. So far the insurance business has given round-the-clock services because of the competition among the 106 insurers. The effort was to keep the rate structure internationally competitive and to ensure that the rates framed were on the basis of what the clients can bear. The premium rates were reduced on several occasions over the last 15 years. Payment of insurance claims is an essential feature of the insurance business. Over five lakh claims are settled by the industry each year. Discretionary powers are vested at various levels of administration. If the insurance business is conducted in bureaucratic ways there will be delays in settlement of claims and payments.

So far as reinsurance is concerned there is no fear of nationalisation having an adverse impact. Insurance circles do not expect any difficulty in getting reinsurance in international markets. The policy of the insurance companies had been to absorb the reinsurance in the domestic market. Thus hardly 15 per cent of fire, 20 per cent of marine and 10 per cent of accident, is reinsured abroad. In the case of civil aviation and marine hull, large business is written abroad. The total premium on civil aviation is about Rs 8 crores of which more than 80 per cent is reinsured abroad. With the arrival of the jumbo jets on the aviation scene, the capacity of the insurance companies here to absorb the business seems to be limited. Thus a bulk of this business would continue to be reinsured abroad. □

And now the AIRMAIL EDITION

COMMERCE

India's only complete Weekly

EDITOR : VADILAL DAGLI

- With the launching of its Airmail Edition **Commerce** has taken one more step in its continuing effort to reach out to a wider area of readership.
- The Airmail Edition is spurred by the increasing overseas interest in **Commerce** as an invaluable source of facts, figures and comment on India's industry, agriculture, trade, finance and the economy as a whole. Especially the results of the investigations made by the **Commerce Research Bureau** on the basis of the mass of data it has been engaged in collecting and processing, which enable a fuller understanding of the various facets of the Indian economy, have received acclaim from many foreign quarters and have been cited by publications of International organisations.
- And an additional point of interest is the appropriate focus on the international scene provided by our network of correspondents stationed in Washington, Moscow, Bonn, Brussels, Cairo, Tokyo, Rangoon, Hongkong, Colombo, Singapore, Kuala Lumpur, Jakarta, Sydney and Vienna.
- It is this interest, coupled with the fact that India is poised for a faster economic growth, opening up in the process larger trade and investment opportunities, that has prompted us to seek, through the Airmail Edition, to meet the increasing demand for **Commerce** abroad more promptly and effectively.
- All foreign firms and organisations dealing with India and Indian establishments abroad—both those engaged in interpreting India to the outside world, such as our embassies, commissions and consulates, and those promoting economic co-operation between India and the respective countries—should find **Commerce Airmail Edition** a handy and unerring guide.

SURVEY

FUTURE OF CONGRESS (O)

THE AICC (O) session in Bombay decided to function as an effective opposition party without any alliances. It also declared its firm opposition to any move for unity with the ruling party. With this political decision the Congress (O) will now have to determine its line of action both within and outside the legislature. In the present set-up of Parliament there would be many occasions on which the Congress (O) will have to vote with other opposition parties. It will have, however, to state clearly the reasons why it voted in a given manner. If it does not want an alliance with any political party it must be able to develop its own policy and programme on the strength of which it would seek support for itself in the country. This is not as easy as it sounds. In the past the opposition parties have failed to present an alternative policy and programme to the one adopted by the Government and yet have voted against the Government on the plea that the task of the opposition is to oppose. This has all along been the weakness of the democratic opposition in our country.

The Congress (O) leaders who were till the other day part of the ruling party have fallen prey to this weakness. When they sat with the opposition they developed the same tendency of roundly accusing the Government of insincerity and claiming that they were the real exponents of the policy wrongly claimed by the ruling party as its own. This style of action had some meaning when people were still under the spell of slogans. One of the lessons which could be learnt from the Lok Sabha elections in 1967 and again in 1971 is that people are now capable of forming their own judgment. They may not be able to appreciate the subtleties of argument. But they know on which side their bread is buttered. If the Congress (O) wants to develop in course of time as the main opposition to the New Congress it must convince the people that it has a better programme for the amelioration of the conditions of the masses. The New Congress leadership might be sincere or otherwise in its claims. But that is the problem between the people and the New Congress party. There is no reason why the people should rally round the Old Congress banner merely because it is stated that the New Congress was not sincere in its professions.

The AICC (O) session has passed a resolution reiterating its economic and social programmes. This is presented in a language which gives an impression that the AICC (O) wants to build up its image as a radical party in the country. It has supported the take-over of general insurance but has added that this was a part of the programme of the undivided Congress. The same can be said of many of the items that are common to the New Congress and the Old Congress programmes. The question therefore is what policy each party is going to adopt in order to

achieve that programme. The Old Congress would be well advised not to repeat the old slogans while criticising the policy of the New Congress. The Congress (O) leadership must follow the day-to-day development in the policy and programme of the New Congress. It must have sufficient honesty and wisdom to support that part of the policy and programme which is in consonance with its own programme. While opposing the other aspects of the Government action, the Congress (O) should accept the responsibility of clearly defining the alternative line and of explaining the reasons why it preferred it. It is only in this way that parliamentary democracy can develop. A party which plays its role in its development will alone have the claim to be accepted as an alternative to the ruling party. If these compulsions of functioning in a parliamentary democracy are recognised, there is no reason why the claim made by the Congress (O) leadership that it has a bright future should not materialise. □

PORTS MARKING TIME

IT will be regrettable if the stationary trend in the traffic handled by the major ports, which was evident last year, is allowed to continue. This reflects the slowing down of the implementation of schemes for expansion of port capacity. Any slackening in this respect will come in the way of the export effort which is just gathering momentum. Realising this the Minister for Transport, Mr Raj Bahadur, did some plain speaking to the port authorities about their responsibilities at his recent meeting with the Chairmen of major ports. He particularly deplored the lack of a sense of urgency on the part of the authorities in regard to the implementation of development programmes.

Procedural delays have been allowed to block the procurement of desperately needed equipment and for long periods. The port authorities seem to be moving at a leisurely pace even in the matter of placing orders or in dealing with tenders. It has been found that six to seven months pass before a tender is processed and proposals are submitted to the Government for awarding contracts. These delays lead to further delays. In many instances, the validity of the tender had lapsed before the processing was completed, making it necessary to call for fresh tenders. On present indications, it appears doubtful if the ports will be able to acquire the full complement of equipment for which allocations have been made in the Fourth Plan, within the current Plan period. And this means that the ports will not be equipped to handle the traffic anticipated by 1974.

Encouraged by the substantial increase in exports last year, the Ministry of Foreign Trade has set its sights high. Achievement of a 10 per cent growth of exports is now taken for granted. Are the ports geared to handle the increased traffic implied in a 10 per cent growth rate and to help the export effort by speeding up the

handling of cargo? Indian exporters are handicapped by high rates of ocean freight which adversely affect our competitiveness in foreign markets. The long time taken to load and unload cargo at Indian ports, which results in longer turn-round of ships and increased berthing charges, is the ground often advanced by the shipping conferences for raising freight rates. All this underscores the urgent need for modernisation of equipment and installation of mechanical handling facilities at Indian ports. □

ASIAN TEA

INDIAN tea has been losing ground in its traditional markets—the UK, Ireland, the US and Canada. It would be futile to hope to increase tea exports to these countries as the per capita consumption there as well as in Western Europe has been declining; at best, lost ground can be retrieved. India should, therefore, turn her attention to other markets. The African countries, as also those of South America, must be ruled out for they themselves have taken to tea production in a big way and, in fact, the former have emerged as a strong competitor to India in her traditional markets and elsewhere. India's best hope of ensuring the stability of her tea industry and increasing her exports lies in making common cause with South-East Asian countries in the promotion and marketing of tea in the region and outside.

In the circumstances, the recent study on regional tea promotion brought out by the ECAFE is timely and of particular interest to India. There are two ways of dealing with the basic problem faced by the major tea producing countries in the world market, namely, decline in the unit value of tea. One is to restrict production and exports and the other is to promote greater consumption in the importing countries. The study rightly favours the latter course as the former alternative will have undesirable economic and social consequences for countries practising such restraint.

According to the study, it is desirable to have a regional marketing scheme to stabilise prices and to effectively prevent the few firms who control the major tea markets from manipulating prices at auctions in their favour. The study has recommended that tea-producing countries in the ECAFE region should take positive action on a regional or sub-regional basis to safeguard their common interests. They should be able to function as producers, blenders, wholesalers and retailers. The marketing arrangement proposed by the study is intended to co-ordinate these functions. Further, the marketing machinery should be able to supply the requirements for tea production, arrange shipments and the underwriting of insurance to cover the risks involved in the tea trade. Actually the ECAFE study would like a five-year regional tea promotional campaign to be conducted on this basis. The scheme is worth trying and since the other coun-

tries in the region barring Ceylon are not large producers of tea, India will have to take the initiative in pushing it through.

Indications are that in the not too distant future tea production in the ECAFE region will be outstripped by that of the African countries, which is bound to tell on the exports of the former. As it is, the tea export pattern shows that the region's relative position in the world market is becoming weaker and that of the African and Latin American countries is growing stronger rapidly. The value of tea exports from the ECAFE countries in 1969 was \$369.8 million, 18 per cent less than in the previous year. On the other hand, Africa's tea exports rose to \$81.2 million in 1969 which was 7 per cent higher than the level in the preceding year. When compared with the early sixties when exports averaged \$45.6 million annually, exports from the African countries have now nearly doubled. The time has, therefore, come for the ECAFE countries to act in concert in order to prevent further inroads into their tea export trade. □

ARSON IN SLUMS

FIRE may have a cleansing quality, but when it breaks out too frequently, as it does in the slum areas of Madras, it is difficult to look upon it as a benignly purifying agent. The question is whether the fires are accidental or wanton. It is possible that slum dwellers in Madras are careless in handling or extinguishing lamps and open ovens used for cooking. The use of flimsy, combustible materials like plaited fronds increase the hazards. But when fire-raising is practised in the hope that the authorities would provide durable dwellings at nominal rent, it is time to ask whether slum-dwellers deserve what they demand of the Tamil Nadu Government. It has set up a Slum Clearance Board to improve their living conditions. It has also taken up town and country planning, mainly through the levy of development charges on property-owners, to improve their lot.

The police investigation into slum fires in the past disclosed that some fires arose through design rather than accident, but punishment for arson was hardly thought of. It was surmised that political factors were at the back of fires in dirty, overcrowded localities which are, however, important for vote-catchers. The loss of property is not much, but the cost of relief is considerable. The shortage of water in summer hampers the functioning of the fire brigade which is working as an adjunct of the police department. That some district towns are still handicapped by the lack of fire engines and firemen to deal with sudden outbreaks has been recorded with regret in official reports.

But the city of Madras has fire-fighting equipment and phone service. However, there have been far more fires since 1967 and the huts in some areas have been replaced by roofed tenements. The implications for the Corporation or rather the municipal tax payer cannot be favourable. The Corporation is called upon to provide water-torries for dealing with frequent emergencies in slums. But little is heard about the enforcement of precautionary measures, especially in privately-owned slums. □

- At post-devaluation rate.
- While estimating foreign exchange reserves, SDRs transactions that might have taken place on February 28, 1971 have not been taken into account.
- The figures indicate percentage change during the current calendar year up to the month indicated as compared to corresponding period in the preceding calendar year.

THE WEEK

THE Union Government appointed on May 19, 30 custodians for 102 general insurance companies whose management was taken over last week. Fourteen custodians have been appointed for 44 companies with headquarters in Bombay, seven for 40 companies in Calcutta, seven for 15 companies in Madras and two for three companies in Delhi. For the other four companies no custodians have so far been named. These are the three subsidiaries of the LIC and the Indian Reinsurance Company, a co-operative in which shares are held by other general insurance companies.

The Union Government has decided to relax further the licensing restrictions with regard to medium and small-scale units which require an investment of less than Rs 1 crore. These units will also be allowed more liberal imports of capital goods. As per the existing regulations these units require licences if their imports of capital goods exceed 10 per cent of the investment or Rs 10 lakhs, whichever is less. This limit is likely to be raised and an announcement about this would be made shortly. This was announced on May 17 by Mr B. B. Lal, Secretary to the Ministry of Industrial Development.

The Life Insurance Corporation has decided to reduce the group insurance premium by 25 to 30 per cent, according to its Chairman, Mr T. A. Pai. The Corporation has taken this decision to make group insurance more attractive.

The private sector will be allowed to set up units only separately at the various stages of steel making within the limits of the Government's policy of securing the commanding heights in steel production for the public sector, according to the Minister of Steel and Mines, Mr Mohan Kumaramangalam. The private sector will not, therefore, be allowed to set up integrated steel plants.

Punjab, Haryana and Uttar Pradesh are likely to experience "an acute power shortage" in 1971-72, according to a region-wise study on power supply position by the Union Ministry of Irrigation and Power. In 1970-71 also these States had experienced severe shortages.

The Union Minister for Planning, Mr C. Subramaniam, announced on May 18 that an agricultural bias would be given to the Fourth Plan next year. Only marginal changes are expected to be made in the current year's Plan.

Air-India and the BOAC reached an agreement on May 14 on the operation of Air-India's Jumbo service across the Atlantic. According to the agreement, Air-India would operate three Jumbo services a week, and the first commercial flight will leave London for New York on May 26.

Mr Sadiq Ali, the retiring general secretary, was unanimously elected President of the Congress (O) at the concluding session of the AICC (O) at Munshi Nagar, Bombay, on May 16. But immediately after assuming office Mr Sadiq Ali announced that he was only an "interim President" and the election of the President in accordance with the party constitution

will be held as soon as possible, probably in three or four months.

Mr Ajit Biswas, Forward Bloc candidate in the by-election to the West Bengal Assembly from Shyampur constituency in north Calcutta, was shot dead on May 18. The by-election had been caused by the assassination of Mr Hemanta Kumar Basu, Chairman of the All-India Forward Bloc, on February 20. The by-election scheduled to be held on June 6 will also have to be countermanded because of the murder of Mr Biswas.

Mr Uma Shankar Dikshit, Minister for Works and Housing, has also been given temporary charge of the Ministry of Health and Family Planning following Mr K. K. Shah's resignation from the Union Cabinet. The acceptance of Mr Shah's resignation was announced on May 19 in a press communique from Rashtrapati Bhavan. Mr Dikshit will also succeed Mr Shah as leader of the House in the Rajya Sabha.

A CPM-sponsored motion of no confidence in the democratic coalition ministry was defeated in the West Bengal Assembly on May 18 by 141 votes to 132.

A full bench of the Punjab and Haryana High Court held on May 18 by a majority of 3 to 2 that the powers of the Election Commission of India to allow inspection of ballot papers under Rule 93 of the Conduct of Election Rules, 1961, were not wider than that of a competent court or tribunal under the same provision, and that the Election Commission should not allow inspection to fish out evidence and to collect material for an election petition. Inspection of ballot papers should be allowed only after the Election Commission itself was satisfied that *prima facie* there was substance in the charges. The court, therefore, allowed a writ petition filed by Mr Gurdas Singh Badal (brother of Punjab Chief Minister, Mr Prakash Singh Badal), the successful Akali candidate from the Fazilka parliamentary constituency, and quashed the order of the Election Commission dated May 15,

1971, allowing Mr Iqbal Singh, the defeated Congress (R) candidate, to inspect the ballot papers of this constituency.

The UN Secretary General, U Thant, issued an appeal on May 19 for contributions in cash and kind to help the refugees from East Bengal to India. The appeal was made on behalf of all United Nations organisations and on the basis of preliminary reports received by him from various agencies and from the UN High Commissioner for refugees.

The Afghan Prime Minister, Mr Nur Ahmed Etemadi, tendered his resignation to King Zahir Shah on May 16, according to Radio Pakistan. After accepting the resignation King Zahir Shah asked Mr Etemadi to continue in office till a new Government was formed.

Money easy

Conditions were comfortable in the Bombay short-term money market as of Wednesday. Funds were freely available and interest rates remained unchanged. In the inter-bank call section, both renewals and fresh money were reported at 5½ per cent with lenders over. In Calcutta and Madras markets the rates ruled at 5 and 5½ per cent respectively.

Price index down

During the week ended April 24, 1971, the Index Number of Wholesale Prices recorded a fall of 0.8 per cent to 181.5. At this level, the index was only 2.9 per cent above its level a year ago.

Mr G. V. Hallikeri, Chairman of the Mysore Legislative Council, died on May 15 following a heart-attack. He was 66.

PEOPLE

MR P. C. Mathew has taken over as Secretary, Ministry of Works and Housing.

Mr S. V. Lathia has been elected President of the Bombay Industries Association for 1971.

50 years ago

Replying to a letter from the Indian Merchants' Chamber and Bureau of Bombay, the Government of India has stated that it has no information regarding the proposed issue by certain railway companies of a loan of ten to fifteen crores at seven or seven and a half per cent, under government guarantee. That the railways in India is passing through an acute financial embarrassment needs no demonstration, their present plight being due to the aftermath of the war. Having been inevitably starved during the conflict and possessing no reserves to fall back upon, the Indian railways is clamouring today for financial assistance which the Government of India, unfortunately, is not at present in a position to render. The provision for railways in the budget for the current financial year was, as we pointed out in a previous article, only fifteen crores as against twenty-

two crores and a half, allotted in 1920-21. We are therefore not at all surprised at the scathing condemnation, recorded by Sir Valentine Chirol in the London *Times*, of the "antiquated system of railway administration and finance, of which it was possible to disguise the defects so long as it was not subjected to any searching strain". Sir Valentine complains that travelling is far less comfortable in India today than in pre-war days; trains are fewer and far more crowded, and the rolling stock war-worn and dilapidated. Even the permanent way has deteriorated. But the mere discomfort of the traveller is nothing compared to the disabilities to which the trade and commerce of the country have been subjected on account of the inadequate railway facilities for transport of merchandise.

COMMERCE

May 21, 1921

7 years old and tougher than they come

Because nothing but the best will do for Gujarat Steel Tubes. Our insistence on quality begins with the raw material. Follows right through to the finished product. Our tubes have a reputation that finds them ready acceptance in 35 countries all over the world.

Our talented young staff design and fabricate the machinery we use. And are planning our future—increased production, a bigger range of tubes and pipes, better housing and amenities for our workers.

We started with advantages: the enthusiasm and enterprise of youth. Sound technical know-how. An uncompromising dedication to quality. All of which enabled us to declare a dividend in our first year of production.

Since 1966 we have doubled our sales. And added the most modern welding technique—TUFFWELD—high frequency induction welding. Today we are one of 73 export houses recognised by the Government of India.

We look forward to the future with confidence. A confidence born of achievement. The trust of our dealers. The satisfaction of customers. Above all, the unsurpassable quality of our products.

REPORT

THE NATION

From Our Own Correspondents

Congress (O): Still debating

BOMBAY.

THE predominant impression that the AICC (O) session in Bombay left on observers was that the leadership far from being chastened by the rout of the Congress (O) in the recent elections was allowing its internal squabbles to further undermine the party. Indeed, the party has emerged from the session hopelessly divided. Though the leaders managed to avoid an open clash over the choice of the new President at the last moment, the differences among them over this matter remain as acute as before. The Presidentship has fallen on the unwilling shoulders of Mr Sadiq Ali. He himself told the AICC (O) that he would only be an "interim President" and the election of a President in accordance with the party constitution would be held as soon as possible, probably in the next three or four months.

In the first place, the manner in which Mr Sadiq Ali was elected President was unusual. The Congress Working Committee which met a day before the AICC (O) session decided that the President should be chosen by the too familiar but over-worked device of consensus. But a consensus defied the day-long efforts of the Committee. The supporters of Dr Ram Subhag Singh, Mr Ravindra Varma and Dr P. C. Chunder, who were aspirants for the presidentship, were not prepared to relent. Finally it was decided that Mr Nijalingappa should be entrusted with the task of finding his successor. With the Working Committee out of the way, he had no difficulty in fulfilling this task. He had all along been wanting Mr Sadiq Ali to take over from him. Mr Sadiq Ali's name was proposed by Mr C. B. Gupta and seconded by Mr Sanjiva Reddy and unanimously approved by the delegates. But the fact of his being a compromise candidate, as also of his unwillingness to serve a full-term as President, will keep the antagonism particularly between the supporters of Dr Singh and of Mr Varma simmering and bring it into the open when Mr Sadiq Ali lays down office. It is no secret that Mr Morarji Desai has thrown his weight fully on the side of Mr Varma.

In all, 40 non-official resolutions were tabled, but 14 of them could not be debated as either their movers were absent or the substance of these resolutions formed part of the official resolutions, especially the one on the political and economic situation. This resolution, for the greater part, spoke of achieving objectives not dissimilar to those of the ruling party. It drew attention to the disparities in the incomes of different sections of society and urged reduction of these in the interest of promoting social justice and strengthening democracy. It reiterated that the right to work and adequate means of livelihood incorporated in the directive principles of the Constitution should form the basis of the planned development of the country.

The only new element in the resolution was the decision of the party to bid good-

bye to the "politics of alliance" and go it alone in future. The experience of the last elections had convinced it that henceforth it should rely on its own strength and function as an effective opposition party without alliance. Even this will necessitate a new style of functioning. The former Speaker of the Lok Sabha and one-time Congress President, Mr Sanjiva Reddy, said that it was no use finding

REFUGEES FROM BANGLA DESH

The impact of the unending influx

INTERNATIONAL assistance to India to deal with the colossal refugee problem resulting from the Pakistani military offensive in East Bengal has been meagre and slow in coming. It is, however, hoped that the report which a United Nations team will be submitting on the basis of what it saw at first hand of the extent of the influx from East Bengal and the plight of the refugees will goad international organisations and advanced countries into action. The leader of the UN team, Mr Charles Mace, said in New Delhi before returning to his headquarters in New York that the refugee problem was indeed "monumental". He accepted the Government of India's assessment that there were 28 million refugees from Bangla Desh. He also shared the Prime Minister Mrs Gandhi's view that the refugees should be enabled to go back home as soon as possible. She said in Calcutta after the conclusion of her two-day visit to several refugee camps in the eastern States that it was for the international bodies to see that normal conditions were created in Bangla Desh so that the evacuees could return to their home.

Mr Mace made it clear that whatever help the UN might decide to give will be administered by the Government of India and not by UN agencies. But, for India it was not merely a question of relief. As the Prime Minister said, the Bangla Desh refugees posed not merely an economic problem for the country, but also a political and social one. Meanwhile, fuller details of the refugee problem in West Bengal, Assam and Meghalaya and the difficulties faced by the State Government concerned in tackling it have been received from Commerce correspondents, which are published below:

WEST BENGAL

The problem is one of dispersal

CALCUTTA.

THE number of evacuees from Bangla Desh who had crossed over to West Bengal till last week has been estimated at around 2.5 million. According to the West Bengal Refugee Rehabilitation Com-

missioner, daily arrivals in West Bengal are 30,000. Mr P. N. Luthra, Additional Secretary of the Union Rehabilitation Ministry, has estimated the arrivals in other States, such as Assam, Meghalaya and Tripura, at a minimum of 20,000. Thus, the daily influx into India is estimated at around 50,000.

All the bordering States, namely, Assam, Meghalaya, Tripura, West Bengal and Bihar, have begun to feel the pinch of this influx, West Bengal being the hardest hit of all. In the first place, the refugees are concentrated in the border districts only, particularly Nadia in West Dinajpur, which has created a space problem. The land occupied by the refugees belongs to private individuals who want it back. With the onset of the monsoon, most of the land now occupied will get inundated. The refugees, therefore, will have to be dispersed to other centres well before the monsoon. This particular problem is very urgent. The movement of millions, just before the monsoon, creates an impossible problem for the railways, whose capacity is already strained. Secondly, the additional demand for the necessities of life has started affecting the local prices, the increases now ranging between 50 and 60 per cent. This is causing hardship to the local people. Thirdly, the schools and colleges, where many evacuees are housed, will be needed for examination purposes soon. The sanitary hazards apart, evils of racketeering in exchange of gold and Pakistani rupees from the evacuees for Indian rupees and commodities have raised their ugly head.

Moreover, the communal tension in Bihar, especially in areas close to the Bengal border, fanned by stories of atrocities on non-Bengali Muslims in Bangla Desh, may soon create a law and order problem. Considering these difficulties, the West Bengal Government has urged the Centre to come to a quick decision concerning the dispersal of refugees. According to Government sources, the maximum number the State can accommodate is 50,000. The State is not worried about the financial strain, as the Centre has agreed to bear all the expenditure on evacuees, each costing at

least Rs 2 per head daily. But the other problems mentioned earlier defy solution.

The State fears that the rate of influx may increase further as it has the longest border with Bangla Desh and because of cultural and other affinities the evacuees would prefer to come to West Bengal rather than go to Assam, Meghalaya or Tripura. The visit of the United Nations Deputy Commissioner for Refugees, Mr Charles Mace and his favourable reaction to the Government of India's move for making the evacuees an international responsibility, may be encouraging from the national point of view but has not brought the same comfort to West Bengal as it has to accommodate the large refugee population. Several voluntary organisations, including the Indian Red Cross, the Indian Medical Association, the Ramakrishna Mission Seva Pratisthan and the Bharat Sevak Samaj are operating in hundreds of camps supplying medical aid, vegetables and clothes for evacuees. The total number of camps in West Bengal to date is over 200. The entire cost is borne by the Centre.

ASSAM AND MEGHALAYA

Crippling effect on local economy

SHILLONG.

SEVEN weeks of freedom struggle and the consequent atrocities perpetrated by Pakistani troops on innocent civilians in East Bengal, have brought a total of about three lakh evacuees into Assam and Meghalaya. Of these, a total of over 1,80,000 have been registered, while the remaining are awaiting registration. Of the registered refugees, 1,85,000 have been lodged in refugee camps in Meghalaya and another 28,000 are housed in refugee camps in Assam. While some of the registered refugees have gone to stay with their relatives in Assam and Meghalaya with the permission of the State Governments, some others are still waiting in transit camps for being settled in one of the 80 refugee camps set up in Assam and Meghalaya.

Besides providing accommodation and medical facilities, the Governments of Assam and Meghalaya are giving a cash assistance of Rs 2 per head, at flat rates, for purchase of rations to evacuees residing in refugee camps. Free utensils have also been provided to refugees for cooking their food. Although the State Governments are doing their best to meet this unexpected and gigantic task, much still remains unattended. For instance, the sanitation arrangements in refugee camps are inadequate and refugees are exposed to the danger of epidemics. In fact, cholera has broken out in some of the refugee camps claiming so far 40 lives.

The continuing refugee influx has posed three major problems for the State administrations of Assam and Meghalaya: (a) lack of vacant land for large camps; (b) the upsetting of the local economy, with prices shooting up wherever refugees were concentrated; and the refugees flooding the already-crowded labour market; and (c) the smuggling in of gold and arms, with the attendant danger of the latter falling into "undesirable hands".

A majority of refugee camps are in schools and colleges (almost all such buildings in the border districts have been taken over) which will have to be returned to the institutions soon. The problem in Tripura is, perhaps, even more acute, since

the influx there (5 lakhs) is as much as a third of its total population. Tripura, therefore, does not want any refugees at all in the territory.

The Union Government has given the Government of Assam a sum of Rs 16 lakhs

THE budget session of Parliament starts from Monday. Naturally there is speculation regarding the measures the Government would propose in order to implement the socio-economic programme promised in the election manifesto by the New Congress. In the first session after the elections to the Lok Sabha, nothing spectacular was attempted. At that time the excuse was that the Government had just taken over and some time was necessary for the new ministers to acquaint themselves with the policy issues in the light of the administrative advice they would be able to command. There were some changes in the Government during the inter-session period. But they are not of such a far-reaching character as to justify any further delay in implementing election promises. In fact, the Government has taken a few steps in this direction already. The public sector trading organisations have been entrusted with larger responsibilities in the field of imports, a crash programme for augmenting rural employment has been prepared and the management of general insurance companies has been taken over by the Government. A draft bill for imposing limitations on urban property has been circulated among the State Governments for their consideration and implementation. Some of the State Governments have announced their intentions to initiate suitable legislation in the near future to achieve the objective. The Centre has promised that the licensing procedures will be re-examined with a view to eliminating avoidable delays in disposing of applications. Decisions on many of the applications pending for a long time have been announced.

With these measures in the process of implementation we will have to wait for some time before their contributions to the achievement of the socio-economic goals of the New Congress could be assessed. The Government has still to announce its decisions on some of the more important items of the manifesto. For instance, paragraph 34 of the manifesto contains the following promise: "The private sector will be stimulated to the maximum extent possible without allowing the emergence of private monopolies and concentration of wealth and economic power." The Budget will disclose the line of thinking of the Government in this direction. There are indications that the Government is in earnest in stimulating production. In the agricultural sector some further progress in production is expected. Unless this is matched by increased production in the industrial sector, imbalances would develop. Liberalised import policy will help, but by itself it will not be enough to generate adequate production in the manufacturing sector of the economy. The Budget should give some indication of the policy the present administration would adopt towards production in the

POLITICS TODAY

private sector. The crux of the matter is to balance the considerations based on the need for growth and the need for maintaining social stability.

One of the most difficult problems facing the Government relates to the right to property. The manifesto has assured the people that the New Congress "has no intention of abolishing the institution of private property". But it is clear from the subsequent reference to the "pledge to prevent individual holdings and ownership of property beyond reasonable limits and the concentration of economic power and wealth in a few hands" that the Government has to evolve a formula to deal with this right insofar as it is guaranteed as a fundamental right by the Constitution. Reports have appeared in the Press regarding a comprehensive plan evolved by the legal experts of the Government. It seems the plan envisages ratification of the proposed constitutional amendment bill by State legislatures. The proviso to Article 368 of the Constitution as it stands today requires ratification by the legislature of not less than one half of the States of the amendment seeking to make any change in specified parts and articles of the Constitution. Part III which deals with fundamental rights is not mentioned in the proviso. But the Joint Committee of Parliament on the Constitution (Amendment) Bill 1967 moved by the late Mr Nath Pai had recommended the inclusion of this part in the proviso. It seems this recommendation has been accepted by the Government.

This would make the procedure of amending the Articles of the Constitution dealing with fundamental rights more cumbersome. It remains to be seen whether it would pass the test of validity as prescribed by the Supreme Court in the Golaknath case. The Government would like to see if this via media will help in averting a possible clash between Parliament and the Supreme Court.

A bill to amend Article 13 of the Constitution so as to free Constitutional amendments from the purview of this Article is ready. If Parliament passes the amending bill with the requisite two-thirds majority it can be presented to the President for assent only if it is ratified by the legislatures of not less than one half of the States by resolutions to that effect. It should not be difficult to get the amending bill through even if this additional provision is applied to it. The ball will then be in the court of the highest judiciary in our country.

—Rohit Dave

to meet the initial expenses and has promised to bear all expenses on maintenance of refugees. Similar assurances have been held out to Meghalaya and Tripura. □

MAHARASHTRA

How Sicom does it

BOMBAY.

THE State Industrial and Investment Corporation of Maharashtra Ltd (Sicom), set up five years ago, has played a significant role in the development of the under-developed regions of Maharashtra. Though the State is one of the most industrially developed in the country, its industrial units are concentrated in the Bombay-Thana-Poona complex. It was to remove this regional imbalance that the State Government introduced schemes of package incentives in 1964 to counter the pull of the developed regions. It was soon recognised that what was needed was a separate institution which would not only enable the entrepreneur to make better use of the facilities that have been provided in new areas but also provide a variety

of other services to ensure that the package was translated into action.

Sicom's contribution has to be viewed against the background of the severe economic recession which coincided with its initial years of functioning. Between 1966 and March 1971, Sicom assisted 877 projects involving an investment of around Rs 206 crores. In addition there are 374 projects which are likely to get assistance from Sicom. Thus a total of 1,251 projects, involving Rs 231 crores, are expected to be set up in the under-developed areas. Of these, 785 projects with an investment of Rs 117 crores have gone into production or are being implemented. The total number of jobs expected to be provided by these 785 projects is over 40,000.

The areas in which Sicom's impact has been substantial are Nasik, Nagpur and Aurangabad. When Sicom came on the scene there was scarcely any private investment in Nasik. The investment there was restricted to the public sector's Hindustan Aeronautics Ltd and the Government Security Printing Press. In the last five years commitments have been made by 200 industrial units with a total investment of Rs 55 crores in regard to the Nasik area. Similarly, 152 industrial units, with investment of Rs 46 crores, are likely to be

set up in the Nagpur area. Sicom took up a year ago promotional effort in Aurangabad. It is now taking up a suitable industrial area in the Konkan for special promotional effort. The cost to the State Government for using Sicom as the agency for promotion is estimated to be about 20 paise for every Rs 100 of investment in the under-developed areas.

The Corporation also administers the State Government's credit guarantee scheme for medium-scale industries. This scheme is stated to be the only one of its kind in the country. So far 89 medium-scale units had availed themselves of this assistance and the loans covered by the scheme amounted to Rs 5.5 crores. In guiding entrepreneurs to new areas, the Corporation has started plant location service. The Corporation has also launched a concerted drive to get entrepreneurs all over the country interested in the package scheme of incentives which was revised two years ago. It is now considering the possibility of taking up industrial projects either on its own or in partnership with others. The State has deposits of iron ore, coal, limestone, etc. Sicom has undertaken detailed investigations for launching a project for the manufacture of sponge iron in Chandrapur district. □

REPORT

THE WORLD

From Our Own Correspondents

JAPANESE AID

A rather liberal definition

TOKYO.

IF overseas investments in a department store or a geisha house, say, in Bangkok, can be included in aid, Japanese aid last year (1970) amounted to \$1,824 million. That this in fact is the case is revealed by the Government's annual economic co-operation report to the OECD. This represents a staggering 44.4 per cent increase over the previous year's level. But, in terms of substance, the official details themselves would deflate much of the claimed increase in aid (see table). The basis on which the rich dozen define aid within the DAC framework was not accepted by the Pearson Commission. By the Commission's norms two-thirds of Japanese aid is no aid at all. By the DAC definition, Japan would call aid any capital transferred to developing nations, no matter whether it is for opening a beauty salon or a night club or an auto parts factory with or without representation of local interest or request from the local authorities. War damage reparations are also shown as aid. So are direct private investments.

But, in spite of this, Japanese achievement in the field of economic co-operation has been substantial. Last year Japan ranked third or fourth among the aid givers. Her aid contributions constituted 0.93 per cent of her GNP last year, less

than 0.07 per cent short of the 1 per cent target. With her balance of payments standing at about six billion dollars today, Japan has on hand a serious yen problem. To avoid upward revaluation of the yen one of the measures urged is dispersal of this mounting accumulation. Therefore, overseas investment in the development of raw materials is bound to assume gigantic proportions. This is necessary to sustain her growth and to avoid stagnation and then decadence which the Japanese dread most today after seeing what has happened in Britain and is happening in the US. Shrinkage of aid will be disastrous to the Japanese economy. Aid will, therefore, increase aggressively every year.

In course of time all her overseas economic activities will be covered by one term, that is, aid. Much national attention is being paid to this today so that a new logic is built to justify tomorrow's "aggressive" economic advance in all continents. In most parts, aid will be the name for it. Whatever it is called, any country falling outside the area of Japanese economic "aggression" will have its own development retarded! This is the bone chilling prognostication of American futurologist Herman Kahn who makes frequent trips to Japan to spur Prime Minister Sato's Government, a willing horse, into greater action not only to catch

up with the US economy but to leave it behind. "But is it really possible? Can Japan really do that?" Mr Sato had asked Kahn last month. The prophet said he could see it so clearly that Japan was actually doing it! The Japanese reporters

said Kahn left Sato the happiest man in Tokyo that evening.

Almost the entire attention of the Japanese foreign office today is towards diplomatic preparation for Japan's economic "offensive" that the world is bound to face. The diplomatic efforts are directed towards giving the term "offensive" a new meaning to make it welcome. To call all economic activities in the developing world "aid" is part of these efforts. It will be mean to grudge it! □

UAR

Sadat liquidates his rivals

CAIRO.

WHEN President Anwar el-Sadat sacked his formidable Vice-President on May 2, the world outside and particularly the Soviet Union did not register any visible reaction. Among informed circles in Moscow, one found no trace of any resentment over the fate of Mr Sabri, known for long to be Egypt's staunchest supporter of the Kremlin. On the contrary, *Pravda* on that day thought it fit to praise Egypt's sense of "realism" and also said that the United States policy was sometimes capable of turning towards peace initiatives. The reference obviously was to President Sadat's initiative for settlement with Israel through Washington's good offices and to the impending Rogers' mission to Cairo. It was conceded that in order to forge ahead with the peace moves President Sadat certainly needed greater flexibility.

It was indeed to gain this flexibility that President Sadat had to act swiftly and remove from positions of power besides Mr Sabri and several of his aides, even some of those who could not by any stretch of imagination be called "leftists" but were at the same time a thorn in the President's side. Mr Mahmoud Fawzy, the erstwhile Prime Minister, for example, was a known western-oriented politician. Yet like Moscow in the case of Mr Sabri Washington might perforce have to wink at the dismissal of Mr Fawzy, so that the way is clear for President Sadat's moves on the West Asian crisis.

This is an occasion for President Sadat to compliment himself even as his axe has been chopping off both left and right. His advantage is that both Moscow and Washington are keenly aware of Cairo's political tradition, which is that the President of Egypt has been the most successful only when he was able to strike a rapport with his people over the heads of the political organs which he had to build in order to back his claim for democratic functioning. There were many times in the past when Mr Sabri as the strong arm of the late President Nasser found it necessary to brush aside these very political organs to implement Nasser's policies. And now when his forces are strong in these organs it is natural that they had to go if President Sadat had to have his way.

It is in this context that few here in Cairo talk in terms of purge of the left or the right, though President Sadat's blows

SOURCE : Ministry of International Trade and Industry.

have fallen most heavily on what are called the leftist elements. There are countries in the Arab world itself, however, which have sought to give this interpretation to the purges and the Iraqi News Agency has made it a point to publicise that the UAR Government has ordered the expulsion of as many as 3,000 Soviet experts besides banning the ships of the Soviet fleet from approaching the UAR coast.

How long Moscow will be appreciative of President Sadat's actions is not clear. While in the matter of the West Asian crisis, the UAR President has certainly bid good-bye to the earlier strategy of using the US fear of Soviet domination in the region to compel Washington to force Israel to withdraw from the occupied territories, in pursuing the Nasser-promoted Tripoli Charter of federation, he has seen to it that the pro-Moscow elements in the federation partner countries are kept out. In fact, President Sadat just did not bother about Gen Nimeiri's virtual withdrawal from the Tripoli Charter even though the Sudan was one of its founder members. And this precisely because he obviously felt that Gen Nimeiri's dependence on a strong Communist Party in the Sudan would be more of a liability in the federation. As against this, Gen Assad of Syria, the man who liquidated the radical pro-Moscow Baathist faction headed by Gen Salah Jedid and Presi-

dent Nuruddin Attassy, and Col Kazzafi, the pro-Nasser revolutionary who had just expelled from Libya the followers of the Baath, were found to be safer compatriots in the federation.

It is this anti-Communist context that had made Mr Sabri to vehemently oppose the federation move in Egypt's Higher Executive Committee, the Central Committee of the Arab Socialist Union and the National Assembly. Mr Mahmoud Fawzy had found common cause with Mr Sabri on the ground that President Sadat was trying to bypass the democratic institutions, otherwise he should have no grouse about the proposed federal structure resulting in the elimination, or the "letting down" of the Communists in the federating countries. It would appear that it is Mr Sabri and not President Sadat, who may eventually have to bear the cross for the possible liquidation of the Communists. For, it is a strange circumstance that the federation idea, very much blessed by Moscow, has found opponents among Communists in these countries. The practical politician that he is, President Sadat has exploited the situation to his advantage to such an extent as to make both Moscow and Washington wish him well. And his hope is that the federation would strengthen his position vis-à-vis Israel which would like to resist even American pressures. □

BUSINESS REPORT

From Our Own Correspondents

COTTON

Recurring shortages

BOMBAY.

COTTON shortage was a recurring phenomenon throughout the sixties. But with the turn of the decade it was hoped that there will be some improvement. However, this has not happened so far. In 1970-71, production is not expected to be more than 53 lakh bales against a target of 65 lakh bales. The Indian Cotton Development Council which met here last week discussed the situation and thought that there was no point in increasing the production target for 1971-72 when performance lagged behind the target by as much as 12 lakh bales in the preceding year. The Council, formed five years ago, has been dealing with this problem as an advisory body. Its assessment of the situation only confirms the criticism that the neglect by the Central and State Governments of cotton development programmes has largely contributed to the recurring shortages. The outlay on cotton development programmes sponsored by the Union Government was hardly Rs 90 lakhs in 1970-71. This is being raised to Rs 2 crores in the current year. But in the context of cotton imports ranging between Rs 70 crores and Rs 90 crores annually during the last few years, this allotment is hardly adequate.

How and where did the cotton development programmes go wrong? The Council thought that the package programmes and other schemes had not had the expected impact on production because the targeted areas were not covered by all the major inputs. Pure seed was not available to the required extent. Plant protection has been another area where vigorous implementation has been wanting.

There are, however, some bright spots in the present situation. On the research side, a new strain, hybrid-4, has been developed with an average yield of 35 to 40 quintals per hectare as against an average of 10 quintals from other varieties in irrigated areas and of 2.5 quintals in unirrigated areas. It should be possible to raise the output of this variety to about 4 lakh bales if the land under hybrid-4 is increased to 4 lakh hectares ultimately. West Bengal provides scope for bringing an additional 4 lakh hectares under cotton in lands vacated by paddy.

The Union Government is proposing to implement an intensive cotton district programme from 1971-72 in six irrigated districts in the country. About 5.6 lakh hectares of land are sought to be covered by this scheme. Besides, in seven unirrigated districts 1.2 lakh hectares of land are to be brought under this scheme. The programme, if successfully implemented,

should increase cotton output by about 8 lakh bales. The Council has plans for increasing cotton production which might involve an expenditure of about Rs 22 crores in the next three years. This envisages selection of about 100 areas in each State where all essential inputs including fertilisers and insecticides would be supplied to the farmers. □

COAL INDUSTRY

Basic problems

CALCUTTA.

IN the Fourth Five-Year Plan, the role allotted to the private sector collieries is much less important than that allotted to those in the public sector. The economic implication of this is naturally discouraging for the industry. The Chairman of the Indian Mining Association, Mr J. F. N. Kalyanvala, who discussed the implications at the Association's annual meeting, felt that the policy of not allowing the private sector collieries to expand according to their potential would put an end to all plans for bringing down fixed costs which were already too high; and in the context of the chronic wagon shortage and inadequate price realisation for the high grades, this could only lead to diminishing production.

Mr Kalyanvala is right. The coking coal target fixed for the private sector collieries was 20.5 million tonnes in the draft Fourth Plan. However, in the final version which came some two years later, the figure has been reduced by as much as 4.1 million tonnes to 16.4 million tonnes. Side by side, the share of the public sector has been increased to nine million tonnes. The story is not materially much different in non-coking coal. The private sector's share has been marginally raised from 44.5 million tonnes to 45.1 million tonnes, while that of the public sector to 23 million tonnes from 19.5 million tonnes. In percentage terms, this means a 67 per cent increase in public sector coal production by the Fourth Plan end, while in the case of the private sector it is about 3 per cent. Overall, taking coking and non-coking coals together, the proportional increases in the share of the two sectors work out to 83 per cent for the State-owned collieries and only 6 per cent for those run privately.

With such a restricted role, the private sector collieries, naturally, have little incentive to reorganise their methods of production scientifically and this has consequences for the economy as a whole. Coal is still the main commercial fuel for this country and the role that oil can play as a competing fuel is limited considering indigenous production and known reserves.

as also the need to save foreign exchange. The right fuel policy, therefore, ought to be that which encourages the production of coal in the least wasteful and economical way—and a policy, that restricts the role of private collieries which still produce the bulk of the country's coal, cannot be the right one.

Two of the basic problems of the coal industry today centre on inadequate and irregular availability of wagons and the loss of markets through increasing railway dieselisation and increased use of oil in industry. The first problem has received the attention of successive Railway Ministers, including Mr G. L. Nanda who once ordered a crash programme of coal movement by the railways, but so far no satisfactory or lasting solution has been found. Perhaps a special committee, consisting of the representatives of the collieries and railways, could go a long way in finding an answer acceptable to both the parties. Movement is, indeed, at the very heart of the coal business, and if this suffers, the producers and consumers suffer alike. □

INDO-JAPANESE CO-OPERATION

A reverse flow of dollars

TOKYO

A SIGNIFICANT fact about Indo-Japanese economic co-operation today is that more dollars flow into Japan from India than *vice versa*. During the current year, for example, Japan received more than 45 million dollars from India in repayment of principal and interest on account of yen credit and suppliers' credit and as much as half of it was on account of interest. In the past five years, India has repaid Japan 141 million dollars on yen credit account and another estimated 125 million dollars on suppliers' credit account. During the same period India received only about 155 million dollars in yen credit. There are many other figures to show how "successful" have Japan's aid policies been so far.

In Japan's aid policy there is a broad geographic division of developing world—a country like Indonesia receives credits from Overseas Economic Co-operation Fund (OECF) and another like India belongs to the area looked after by Export-Import Bank. The OECF is controlled by the Foreign Ministry and, therefore, is used to further Japan's diplomatic interests in a direct manner. The Foreign Office decides the quantum and terms of aid and even directly administers it through its own agency headed by a Director-General. The Finance Ministry is kept informed in a general way but no interference from it is tolerated. The rate of interest for aid from this fund is low: Indonesia is charged only 3 per cent against 5 per cent for India.

What is expected in return is some political satisfaction, as Indonesia, for example, gives Indonesia was given 155 million dollars in April this year, all in yen.

and all of it is to be repaid in yen. Last year she was given 120 million dollars. Yen repayment means Indonesia has to earn yen and since yen is not to be had on international money market, the only way she can have it is by taking all her wares produced with Japanese aid to Japan. A further consequence of this procedure is tying up Indonesia (or any other country so completely dependent on Japan as Indonesia is) to the greater economy of Japan. Even then demand to be treated by this fund is increasing every year. India, for example, suggests every year that at least some of her requirements could come from the OECF. Till this year no aid from the OECF has come. But the chances are she might get part of assistance from this fund next year as Japanese aid policies come more and more under the control of the Foreign Office which feels the need of using aid to further its diplomacy. □

FORESTRY

World Bank team in Uttar Pradesh

LUCKNOW.

A THREE-MEMBER World Bank team, led by Mr R. D. H. Rowe, has made a survey of the possibilities of forestry development in Uttar Pradesh. The team's visit was in connection with a forestry project for which World Bank aid had been sought. The project envisages expenditure of about Rs 30 crores, spread over a period of ten years. The salient features of this project are: afforestation of nearly 220,000 hectares with species of industrial importance, setting up of four logging units with a chain of 12 saw mills and improvement of communications in the forest area. The team arrived in India on May 3, and held discussions with the Union Finance and Agriculture Ministers, the Planning Commission and representatives of the UP Government. According to Mr Rowe, there are immense prospects for the development of forests in the State for industrial purposes.

The plantation activity under the various five-year plans has been based on the anticipated demands for future. Although the achievements under the first two Five-Year Plans were not significant, mainly due to low financial resources, the plantation activity under the Third Five-Year Plan was kept at an increased pace. To meet the requirements of industries like matchwood, plywood, fibre board, "katha", packing cases and wood working, etc, large-scale plantations of industrially important species are being raised under a special scheme. Up to the end of 1970-71, 99,720 hectares have been planted at an expenditure of Rs 5.60 crores. The proposed target for 1971-72 is for raising plantations on over 8,800 hectares at an anticipated expenditure of Rs 60 lakhs.

The eucalyptus plantation in the Terai region, which had impressed the World Bank team, is being worked on a short rotation of 10 years. It is anticipated that the yield from this plantation would be able to feed one unit of 200 tonnes-per-day capacity for manufacture of rayon and pulp. □

Take-over of general insurance

MR S. S. KANORIA, President of the Federation of Indian Chambers of Commerce and Industry, says that the take-over of general insurance had come as a surprise, although it has been part of the programme of the ruling Congress party, in view of the fact that there were a number of more pressing issues before the people such as provision of employment and a better deal to the poorer sections of the community. According to Mr Kanoria, the take-over would affect the climate for foreign investment in India. It cannot achieve the "priority objectives" set by the ruling party. On the other hand, as a result of increasing bureaucratisation it will place unnecessary additional burden on the Union Government's administrative and financial resources.

Mr S. N. Dalmia, President of the Merchants Chamber of Commerce, Calcutta, says that the take-over of general insurance was not surprising as it was only a step forward consistent with the declared policy of the Prime Minister. The Government may not gain much by this as the total amount involved in it is not substantial.

Mr M. Sankaran, President of the Madras Stock Exchange, says that the take-over announcement was not altogether a surprise as the stock markets were getting prepared for a "few shocks" in the coming Budget. The take-over would close one more avenue which was funneling funds for the private sector industry and would result in a setback in stock prices.

Mr Rasiklal M. Mehta, President of the Andhra Chamber of Commerce, says, the economic advantages or otherwise of the take-over could be seen only in its actual working. Mr Mehta hopes that the claim settlements would be as expeditious under the new set-up than in the past.

Dr B. N. Ghosh, President of the Bengal National Chamber of Commerce and Industry, says that the take-over of general insurance companies is another instance of Government action without any economic justification.

Mr C. M. Telliwala, Chairman, Indian Insurance Companies Association describes the take-over of General Insurance Companies as "most inappropriate". General insurance is a service industry which, probably, will be difficult to administer effectively in the public sector.

Shipping on new routes

Mr L. N. Birla, Chairman of All-India Shippers Council, says that shipping lines should provide services on new routes even though these routes may not be profitable on the basis of present traffic assessment. From a long-term point of view that takes national interests into consideration, it is desirable to provide services on new routes in order to promote export and earn more foreign exchange. Even if shipping com-

BUSINESS OPINION

panies temporarily suffer losses in providing service on new routes such losses would be justified from the point of view of economic development of the nation. Referring to the problem of discriminatory freight rates Mr Birla says that there is need for compiling indices of shipping costs applicable to the various routes. There is also the need for urgent action to strengthen the existing institutional machinery to secure fair freight for our export cargo and provide improved shipping opportunities for it. One of the reasons for high freight rates is the lower turn-round of ships in Indian ports. The high occupancy in our ports—which in some cases as high as 95-97 per cent—is also creating countless problems.

Food industry

Mr M. A. Wadud Khan, President of All-India Food Preservers Association, says that the Government should make available 5,000 to 6,000 tonnes of sugar at international price for the food-preserving industry to boost its exports. The Food Ministry should also recommend amendment of rules under the Prevention of Food Adulteration Act which sometimes work as "counter-productive" for the industry.

Suggestions for Budget

The Bombay Shareholders' Association says that the Union Government should lay emphasis on collecting more revenue through growth rather than increasing the present rate of taxation. In a memorandum to the Union Minister of Finance, Mr Y. B. Chavan, the Association says that the effective rate of tax on all companies should be reduced to a uniform level at 50 per cent and the marginal rate, including surcharge, should not be permitted to exceed 60 per cent. The combined incidence of direct taxes on individuals should have a ceiling of 75 per cent; inter-corporate tax on dividends should be abolished; the present exemption limit of Rs 3,000 on dividend for income-tax purposes should be raised to Rs 5,000; exemption limit on individual incomes should be raised to Rs 7,500 and the system of deduction at sources from dividend and interest at 22 per cent and 10 per cent respectively should be abolished.

Import policy

Mr V. S. Bhatia, Chairman of the Calcutta Import and Export Trade Association, says that the Government should form a consultative machinery with the co-operation of the existing trade association for implementing the new import policy. This machinery should solve the problems as and when they arise as there is nothing more frustrating for an exporter than the delay in getting the essential imported inputs.

INTERNATIONAL TRADE AND PAYMENTS SYSTEM

Need for a fresh look

By L. K. Jha

WHEN we look at the world today, we notice some similarities to the situation which preceded the breakdown of international trade and payments in the thirties. There is an acute imbalance in the trade and payments of the western world. The US has been steadily losing gold for a number of years and the measures taken to combat domestic recession and unemployment are encouraging the outflow of dollars. Protectionism is in the air. The Common Market and Japan, on the other side, despite large and continuing surpluses, maintain many restrictions on imports, specially on agricultural products. The developing countries, who are desperately short of capital and whose export earnings are hampered by fluctuations in commodity prices and restrictions imposed by prosperous nations, face a chronic deficit in their payments. The Soviet Union and East European countries as well as China have an enormous and growing volume of trade which is regulated by a series of *ad hoc* arrangements, often of a ding-dong character, rather than as a part of an international system of trade and payments.

The three international agencies which were created shortly after World War II—the International Monetary Fund, the World Bank and the General Agreement on Tariffs and Trade—between them, have made a truly magnificent contribution towards bringing about a better order in international trade and payments in the post-war period.

However, international institutions are bound by their charters. When conditions change, when assumptions on which the charters were framed cease to be valid, we must take a fresh look at the role of international institutions, not with a view to bypass them, not with a view to find excuses for unilateral or bilateral measures which may start eroding their role, but to give them the kind of impetus and support they need to deal with new problems.

When the charter of the International Monetary Fund was being framed, with the pre-war experience of the damage done by devaluations and fluctuations in exchange rates, the emphasis was on the stability of exchange rates. The need for occasional changes was, of course, recognised. Keynes, under whom I had the privilege of working, saw it very clearly indeed that countries might have to adopt a policy of monetary expansion and cheap interest rates to fight unemployment and recession and that such measures may cause an outflow from their gold reserves. However, it was assumed that when imbalances develop the countries concerned would take suitable steps for the regulation of capital movements and, if necessary, adjust their exchange rates with the Fund's approval.

Post-war experience shows that, as a

Excerpts from a speech delivered by Mr Jha, India's Ambassador in the US, at the Economic Club, New York, on May 4.

rule, countries resist any changes, upward or downward, in their exchange rates, and the maintenance of restrictions on capital movements for any length of time has been rejected as being both undesirable and impracticable. So, when West Germany has larger reserves of gold and foreign exchange than the United States, and the increasing outflow of dollars from the US to the Common Market is equally unwelcome on both sides, the situation cannot be dealt with just by hoping that the German mark would be revalued again, or as was suggested recently by France that the US dollar could be devalued.

What we need is the kind of joint thinking which has, time and again, dealt with one crisis after another. When speculative pressures threatened individual currencies, central banks evolved counter-measures to deal with them. When gold was being drained away from the monetary reserves of major countries by speculative demand, they were able to agree upon the two-tier pricing system for gold. When the international payments system began facing a lack of liquidity, the problem was brought within the purview of the International Monetary Fund, and a major step forward was taken with the creation of paper money known as special drawing rights to supplement the availability of gold to the world monetary system.

It is precisely this kind of fresh thinking uninhibited by old traditions that I am pleading for, to be taken now rather than when a crisis actually overtakes us. In the search of an answer not only the payments system but trade policies as well as capital movements will have to be under review.

Let me now turn to the chronic deficit which confronts the developing countries in their trade and payments. It is unfortunate that except for India none of the dependent territories in Asia and Africa were in at the inception of the Fund, the Bank and the Gatt. The kind of problems developing countries would have to face in their attempt to provide tolerable living standards for their people was not clearly foreseen at the time. Since then, there has been a growing awareness of what is needed to accelerate the pace of their development. But what has been done so far is by no means adequate.

At the review session of the Gatt in 1954, in which I was actively involved, the chronic nature of the balance of payments problem of developing countries was recognised. So, they were given a great deal of extra latitude in restricting imports. The International Monetary Fund, recognising the vulnerability of balance of payments of developing countries to seasonal factors affecting their agricultural crops or fluctuations in the prices of primary commodities, has agreed to provide them special credits to deal with the situation. The World Bank, recognising that its original charter was not quite adequate for providing the kind of capital assistance that developing

countries needed, set up an affiliate known as the International Development Association which can and does provide capital to developing countries on terms much more suited to their needs and objectives.

All this progress is in the right direction but has not gone far enough. In the United Nations Conference on Trade and Development as well as elsewhere, more positive recommendations have been formulated to help developing countries to increase their exports by giving them preferential access to markets of industrialised countries and by measures to stabilise commodity prices. It has also been urged that developed countries should contribute 1 per cent of their national income to alleviate the desperate shortage of capital in developing countries. Implementation of these recommendations is not proceeding with the kind of urgency that the situation demands.

Finally, let me say a few brief words about the widening area of trading of the communist world with the non-communist world. When discussions were proceeding after World War II for the formation of new international agencies in the field of international economic relations, it was expected that the Soviet Union and other East European countries would join them. With the development of cold war tensions, this hope was belied. East-West trade shrank into insignificance. The expansion, which has lately been taking place in this trade and the new potential for Sino-US trade, are undoubtedly to be welcomed as a long-term development. At the same time, their immediate impact on established patterns of trade can be disturbing. Here again, foresight, strengthened by co-operation among all concerned, is needed to ensure that the widening of markets leads to prosperity and growth without disruption or dislocation.

It is against this background that I plead for a fresh look at the international trade and payments system. Unilateral action to deal with problems confronting individual countries is fraught with danger and if the major nations resort to it, the result may be as disastrous as in the thirties. Bilateral arrangements or agreements within a group of countries can be just as bad if they create new problems for third countries. So, the approach has to be truly multilateral.

In terms of productive capacity, the world has never been as rich as it is today. The main area of concern seems to be that some of the countries with the highest production potential are not able to use their capacity to the full. Yet, in other parts of the globe, there are desperate shortages and unsatisfied demands. Surely, the best way to solve the problem of recession is to find ways and means of linking idle capacity with unsatisfied demand. The attempt to fight recession by artificially stimulating domestic demand or by curtailing competition from overseas is to adopt a negative approach. Similarly, it seems to me to be tragic that some countries are getting an inflow of capital which they do not want, while others are unable to get even a fraction of their needs. What the situation demands is a fresh look on the whole gamut of international trade and payments in order that the international institutions are equipped to convert what look like threats into opportunities. □

GENERAL INSURANCE TAKE-OVER

Background and implications

By Commerce Research Bureau

THE announcement regarding the take-over of the management of all the 106 Indian as well as foreign general insurance companies by the Central Government through the promulgation of a Presidential Ordinance on May 13, 1971, did not startle those in the general insurance business. In its election manifesto, the ruling Congress party had committed itself to this measure unequivocally. Its implementation was only a matter of time. Perhaps, the actual timing was, at least in part, influenced by the reverses of the ruling Congress party in the election to the New Delhi Corporation.

The nationalisation of general insurance became an important plank of the programme of the Congress party only recently. Even as late as 1956 when life insurance was nationalised, it was made specifically clear that it was not a part of the long-term programme of the Government to nationalise general insurance. During the later years, the issue was raised by the radical wing of the party. But the Government refused to yield. In particular, in 1960, Mr B. R. Bhagat, the then Deputy Finance Minister, made an authoritative statement refecting the plea for nationalisation of general insurance on the following grounds: (a) "There are no resources to any significant extent... in this business". (b) "The profits in this business are slight." (c) "The evils in this business, to a large extent, may be found in some form or the other elsewhere also. We cannot go on nationalising one after another on this ground".

However, at the New Delhi session of the AICC in June 1967, the nationalisation of general insurance was included in the well-known 10-

point programme of the undivided Congress. Later, the ruling Congress adopted it as one of the major planks of its mid-term election manifesto.

The modern insurance business was started in India by the British and other foreigners around 1800. As a result, foreigners dominated the general insurance business in India. Then, despite great odds, Indians forced their entry into this business. After Independence, Indian units made much headway and increased their share of the business. By the end of 1969, the Indian units dominated the business with 82 per cent of the total insurance business (gross direct premium) written in India (Table 1).

Like other industries, this industry also shows a considerable degree of concentration (Table 2).

Table 2 : Position of leading general insurance companies : 1968

Compensation

Since the Ordinance relates to the take-over of only the management of the general insurance companies initially and not the take-over of their assets, it defines the basis for working out the compensation for the management take-over only. The terms of such compensation are as under :

During the period of the management remaining with the Government, the compensation in the case of Indian insurers (other than mutuals) will be one-twelfth of the average annual profits distributed during the three years 1967, 1968 and 1969 or Rs 2.50 for every thousand rupees or part thereof of the net premium income of the undertaking of the insurer during 1969,

whichever is greater. For all other insurers, including foreign insurers, the latter basis will apply.

On the basis of the second alternative, the Government expects that the compensation payable would work out to Rs 28 lakhs per month of the take-over period. The Government is aware that the actual amount of compensation may be higher because of the "profit basis" mentioned earlier which may apply in some cases. The proposed bill on nationalisation of the general insurance companies will lay down the actual amounts of compensation to be paid for take-over of the assets of the nationalised companies.

Resources

The general expectation at the back of this move to nationalise the general insurance business seems to have been that it would place sizable additional resources in the hands of the Government. This expectation seems to be rather over-optimistic. The word "resources" may be used in two senses: capital and current. To begin with the capital resources, the actual position at the end of 1968 (which is the latest year for which data are available) is as under :

Table 3 : Structure of assets of insurance companies at the end of 1968

Types of assets	Ra. crores	Per cent to total assets
1. Government securities ..	12.28	6.6
2. Securities of Indian companies ..	65.83	35.0
3. Lands and buildings ..	7.44	4.0
4. Loans ..	5.83	3.1
5. Agents' balances, outstanding premia and amounts due from other insurers ..	37.94	20.2
6. Accrued and outstanding interest ..	1.09	0.6
7. Other miscellaneous ..	15.28	8.1
8. Deposits, cash and stamps..	42.09	22.4
Total ..	187.78	100.0

SOURCE : Indian Insurance Yearbook : 1969.

It would be broadly evident from these data that the only item which can be regarded as somewhat free or available resource is "deposits, cash and stamps" (Rs 42.09 crores). Much of it is already deposited in the nationalised banks or even if one takes a different view, a sizable part of the amount would have to be allowed to be kept with the insurance companies for the normal running of the business.

The Government spokesmen have tried to play up the fact that, at the end of 1968, the assets of these companies amounted to Rs 240 crores. It is rather misleading to concentrate too much on the figure of total assets. As can be seen from Table 3 much of it is either unavailable or frozen because of the particular form of the asset; for example, lands and buildings, investment in government securities and other similar items.

Turning to the current resources, the total income of the Indian general insurance companies (excluding the LIC) in

Table 1 : Gross premium written direct in India by general insurance business

1967 ..	73	59	72.02 (78.3)	22.00 (21.7)	94.02 (100.0)
1968 ..	72	57	83.51 (77.6)	24.13 (22.4)	107.64 (100.0)
1969 ..	64	42	108.00 (82.4)	23.00 (17.6)	131.00 (100.0)

Note : Figures in brackets denote the percentages.

SOURCES : (1) The Controller of Insurance, Indian Insurance Year Books for various years, for data up to 1968.

(2) Government Press Release for 1969 data.

1968 was of the order of Rs 92 crores (Table 4). But against that, there were the usual payments on account of claims and other expenses of management, leaving a profit after tax of about Rs 3.6 crores. Taken in isolation, Rs 3.6 crores may seem a sizable figure. But, if we take into account the full implications of the additional responsibility of the government sector, perhaps all this trouble may not be worth Rs 3.6 crores.

What first comes to one's mind in this context is the problems relating to employees. There will soon be a demand for putting the salaries and other benefits of employees of all the general insurance companies on a uniform basis. One can take it that in due course this demand would be granted. If on top of this, there is further deterioration in the working of the general insurance business the consequence will be that whatever profits the insurance companies have would soon disappear. In sum, any hope of securing additional financial resources through the ownership of these companies appears to be misplaced.

Awkward problems

The general insurance business is far more complicated than the life insurance business in the sense that the settlement of the claim in respect of each insurance policy is a sort of a compromise on potential litigation. While in life insurance the policies are offered to clients on the basis of a few standard plans, in the case of general insurance, one has to devise almost a new policy with its own specific set of terms and conditions for each new type of risk involved, and all this mostly at a short notice. The settlement of claims has to be made every time on the basis of a fresh and detailed assessment of the magnitude of the actual damage suffered by the client. In life insurance, if a claim is to be paid, the amount to be paid is a clear-cut figure. But in general insurance, the policy specifies only the upper limit of the payment to be made. Thus, the functioning of the industry calls for a lot of decentralisation, initiative at the lower level and expedition.

The very nature of general insurance business demands a subjective decision on the spur of the moment from the officer-in-

charge. An officer in this industry can function efficiently only if his judgment in settling claims is not called into question either in the head office or in Parliament and only if he enjoys wide discretionary powers to accept risks and settle claims as they arise. In this connection, it is well

From polypoly to oligopoly

From Our Insurance Correspondent

THE take-over of non-life insurance by the Government has been in the air for years. But when it came there was, however, an element of surprise in its timing. It was not expected to be pushed through before the amendment of the Constitution to take care of immediate compensation for the take-over. This problem has now been solved by providing for interim compensation; final compensation will be given only after Parliament passes the nationalisation bill.

The bill for the complete take-over of the general insurance companies' assets, liabilities and staff will come after the amendment of the Constitution which will probably be introduced in Parliament in June. It is, therefore, safe to assume that the General Insurance Corporation will come into effect from January 1, 1972. This is a very convenient date for many reasons. Most reinsurance treaties and arrangements will expire on December 31, 1971. If the idea is to save foreign exchange, the question of reinsurance abroad will have to be examined by the General Insurance Corporation. It is expected that the need for reinsurance abroad will be considerably reduced in 1972. The combined resources of many companies will be sufficient to retain substantial risks within the Corporations. Again, if four corporations are formed, each corporation will first cede its excessive risks to the other three corporations before the question of cessation abroad arises. The net result will be that the quantum of and need for reinsurance both within and outside India will be very much reduced.

The best part of the proposed nationalisation is the scheme to have four corporations competing with one another. Insurance is a service industry and competition is essential to maintain it in good condition. It is to be hoped that the four corporations will compete in providing efficient service to the client. They must compete for competent staff by paying them well and they must compete for good business by quoting their own rates, terms and conditions for which they want to underwrite. As the take-over ordinance says, the policyholders' interests are to be protected. So the policyholder should have a right to transfer his business wherever he gets cheaper or better insurance and nobody should question his judgment. Now that the Government will be owning those corporations, there cannot be any illegal rebates and other malpractices.

This is a golden opportunity for the Government to take a realistic view of the situation and let the General Insurance Corporations do life business also if they feel like it. The quality of service to the insured has deteriorated and this is a right time to put the LIC in proper gear.

Existing units in their present form

to remember that about ten thousand policies are issued every day and about five lakh claims are settled annually. Any way, the die is cast. Right or wrong, the decision has been taken. Let us hope that every effort would be made to foster competition and efficiency in this industry.

should be merged with the new corporations with the least dislocation of service conditions of the employees. Even physical shifting and transfers should be carefully planned and effected. It is expected that the four corporations would have their headquarters at Bombay, Calcutta, Madras and Delhi. For speedy operation, offices with their headquarters in Calcutta will be taken over by the Calcutta or Eastern General Insurance Corporation. This will mean that Bombay Corporation will be by far the biggest with the largest business and staff. This situation can be improved by having two corporations with headquarters in Bombay.

The poor performance of the public sector organisations so far must have convinced the Government that these corporations must bring the emoluments and perquisites of their senior executives in line with those in the private sector. The general insurance corporations should also be autonomous for all practical purposes and should be able to follow their own labour, investment and expansion policies without much interference from the Finance Ministry. The Government have their hands full with many problems and insurance, like nationalised banking, can become a real problem if small men in the Department of Insurance are given wide powers to tamper with the autonomous running of corporations. This can be easily done immediately by letting the custodians run the companies to the best of their abilities leaving initiative and responsibilities with the lower staff as before. It is, of course, assumed that the custodians are people with considerable experience of general insurance in responsible positions and yet not too old to take the initiative and bold decisions.

Foreign companies will lose a substantial portion of their profit from India, and even their highly paid expatriate staff will have to be sent back to their respective head offices. Their immediate loss, however, will be a gain in the long run as their contacts will enable them to exchange reinsurance on a profitable basis for years to come without the intermediate cost of a broker.

Branches of Indian companies abroad might have to be wound up sooner or later even in territories where there is a substantial Indian population. This, again, might turn out to be a gain in the long run as overseas branches of Indian companies were never a source of foreign exchange gain, and poor countries like India cannot afford the psychological luxury of a place on the world map. Our immediate problem will be to have a well-run office in all Indian cities where the control should ultimately pass from the glorified agent to the administrative underwriter. □

DOCUMENTS

General Insurance (Emergency Provisions) Ordinance, 1971

NEW DELHI, May 14 (PTI)

The following is the text of the General Insurance (Emergency Provisions) Ordinance, 1971, promulgated by the President on May 13 for the take-over of general insurance

"Promulgated by the President in the 22nd year of the Republic of India

An ordinance to provide for the taking over, in the public interest, of the management of general insurance business pending nationalisation of such business

Whereas it is expedient in the public interest that general insurance business should be nationalised,

And whereas it is expedient that pending such nationalisation, adequate steps should be taken to protect the interests of the policy holders,

And whereas Parliament is not in session and the President is satisfied that circumstances exist which render it necessary for him to take into immediate action,

Now, therefore, in exercise of the powers conferred by clause (1) of Article 123 of the Constitution, the President is pleased to promulgate the following ordinance:

1 (1) This ordinance may be called the General Insurance (Emergency Provisions) Ordinance, 1971 (2) It shall come into force at once.

2 In this ordinance, unless the context otherwise requires

(a) "Appointed day" means the date on which this ordinance comes into force,

(b) "Custodian" means the person appointed under Section 4 to take over the management of the undertaking of any insurer;

(c) "General insurance business" means fire, marine or miscellaneous insurance business, whether carried on singly or in combination with one or more of them, but does not include capital redemption business and annuity certain business,

(d) "Insurance Act" means the Insurance Act, 1938,

(e) "Insurer" means an insurer, as defined in the Insurance Act, who carries on general insurance business in India, and includes an insurer whose registration under that Act has not remained wholly cancelled for a period of six months immediately before the appointed day, but does not include the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956, or any State Government which carries on general insurance business;

(f) "Notified order" means an order notified in the official gazette;

(g) "Prescribed" means prescribed by rules made under this ordinance;

(h) "Undertaking", in relation to an insurer incorporated outside India, means the undertaking of that insurer in India,

(i) Words and expressions used herein but not defined, and defined in the Insurance Act, have the meanings respectively assigned to them in that Act

3 (1) On and from the appointed day, the management of the undertakings of all insurers shall vest in the Central Government, and, pending the appointment of a custodian for the undertaking of any insurer, the persons in charge of the management of such undertaking immediately before the appointed day shall, on and from the appointed day, be in charge of the management of the undertaking for and on behalf of the Central Government, and the management of the undertaking of the insurer shall be carried on by them subject to the provisions contained in sub-sections (3) and (5) and to such further directions, if any, as the Central Government may give to them by notice addressed and sent to the principal officer of the insurer

(2) Any contract, whether express or implied, providing for the management of the undertaking of an insurer, made before the appointed day between the insurer and any person in charge of the management of such undertaking immediately before the appointed day, shall be deemed to have terminated on the appointed day

(3) No insurer shall, without the previous approval of the person specified by the Central Government in this behalf in respect of that insurer (hereinafter referred to as the "authorised person"),—

(a) Make any payment or grant any loan otherwise than in accordance with the normal practice observed by him in respect of such matters immediately before the appointed day,

(b) Incur any expenditure from the assets appertaining to the undertaking otherwise than for the purpose of making routine payments of salaries or commissions to employees, insurance agents or for the purpose of meeting the routine day to day expenditure;

(c) Transfer or otherwise dispose of any such assets or create any charge, hypothecation, lien or other encumbrance thereon;

(d) Invest in any manner any moneys forming part of such assets;

(e) Acquire any immovable property out of any moneys forming part of such assets;

(f) Enter into any contract of service or agency whether expressly or by implication, for purposes connected wholly or partly with the undertaking or vary the terms and

conditions of any such contract subsisting on the appointed day;

(g) Enter into any other transaction relating to the undertaking of the insurer other than a contract relating to the transaction of general insurance business or vary the terms and conditions of any agreement relating to any such transaction subsisting at the commencement of this ordinance

(4) The approval of the authorised person may be given either generally in relation to certain classes of transactions of the insurer or specially in relation to any of his transactions.

(5) Every insurer shall deposit all securities and documents of title to any assets appertaining to the undertaking in any scheduled bank or nationalised bank in which the insurer had an account immediately before the appointed day or in any branch of the State Bank in the place where the head office or the principal office of the insurer is situated or, where there is no branch of the State Bank in such place, the nearest branch of the State Bank, and no such security or document shall be withdrawn from the scheduled bank, the nationalised bank or the State Bank, as the case may be, except with the permission of the authorised person

Provided that nothing contained in this sub-section shall apply to any security or document of title kept in trust with an official trustee in pursuance of the articles of association of an insurer unless the Central Government, by notified order, otherwise directs

Explanation In this sub-section

(a) "Scheduled Bank" means a bank included for the time being in the Second Schedule to the Reserve Bank of India Act, 1934,

(b) "State Bank" means the State Bank of India constituted under the State Bank of India Act, 1955,

(c) "Nationalised bank" means a corresponding new bank as defined in the Banking Companies (Acquisition and Transfer of Undertakings) Act, 1970

(6) Every insurer shall deliver forthwith to the person specified in this behalf by the Central Government in respect of that insurer the following documents namely:

(a) The minutes book or any other book in India containing all resolutions upto the appointed day of the persons in charge of the management of the undertaking before the appointed day;

(b) The current cheque books relating to the undertaking which are at the head office or the principal office of the insurer;

(c) All registers or other books containing particulars relating to the investment of any moneys appertaining to the undertaking including investments on mortgaged properties and all loans granted and advances made;

(d) All brokers' notes or certificates in the possession of the insurer in respect of any orders for the investment of any moneys appertaining to the undertaking.

(7) Without prejudice to the generality of the powers conferred by sub-section (1) and to the provisions contained in sub-sections (3), (5) and (6) any direction issued under sub-section (1) may require the persons in charge of the management of the undertaking of an insurer under this ordinance to furnish to the Central Government or to the authorised person such returns, statements and other information relating to the undertaking as may be mentioned in the direction.

(8) The persons in charge of the management of the undertaking of an insurer under this ordinance shall be entitled to such remuneration, whether by way of allowance or salary or perquisites as the Central Government may fix; and any such person may, by giving one month's notice in writing to the Central Government of his intention so to do, relinquish charge of the management of the undertaking.

4 (1) The Central Government may, as soon as it is convenient administratively so to do, appoint any person as custodian for the purpose of taking over the management of the undertaking of an insurer and the person so appointed shall carry on the management of the undertaking of the insurer for and on behalf of the Central Government.

(2) On the appointment of a custodian under sub-section (1), the charge of management of the undertaking of the insurer shall vest in him and all persons in charge of the management of such undertaking immediately before such appointment shall cease to be in charge of such management and shall be bound to deliver to the custodian all books of account, registers or other documents in their custody relating to the undertaking of the insurer.

(3) Nothing contained in sub-sections (3) (5) and (6) of Section 3 shall apply to any insurer the charge of management of whose undertaking has been taken over by the custodian, but the Central Government may issue such directions to the custodian as to his powers and duties as it deems desirable in the circumstances of the case, and the custodian may apply to the Central Government at any time for instructions as to the manner in which he shall conduct the management of the undertaking of the insurer or in relation to any matter arising in the course of such management.

(4) The custodian shall receive from the funds of the undertaking for the charge of management of which he is appointed under sub-section (1) such remuneration as the Central Government may fix.

(5) The custodian shall hold office during the pleasure of the Central Government.

5 The custodian may, in relation to the undertaking of any insurer the charge of management of which has been taken over by him, exercise:

(a) All or any of the powers which the Controller of Insurance may exercise under Section 106 or Section 107 of the Insurance Act;

(b) All or any of the powers under Section 52B, Section 52BB, Section 52C or Section 52D of the Insurance Act which an administrator appointed under Section 52A of that Act could have exercised in

relation to life insurance business of an insurer.

6 (1) Every insurer shall be given by the Central Government compensation for the vesting in it under Section 3 of the management of the undertaking of the insurer.

(2) For every month during which the management of the undertaking of the insurer remains vested in the Central Government, the amount of compensation referred to in sub-section (1) shall be

(A) In the case of an insurer referred to in clause (b) of sub-section (9) of Section 2 of the Insurance Act

(i) Where the insurer has declared a dividend during at least one of the three calendar years 1967, 1968 and 1969—

(a) A sum equal to one-twelfth of the annual average (for the three years) of the amount distributed to shareholders as dividend, or

(b) A sum equal to two and a half rupees for every thousand rupees or part thereof of the net premium income of the undertaking of the insurer during the year 1969, whichever is greater;

(ii) In any other case, a sum equal to two and a half rupees for every thousand rupees or part thereof of the net premium income of the undertaking of the insurer during the year 1969,

(B) In the case of an insurer referred to in clause (a) of sub-section (9) of Section 2 of the Insurance Act, a sum equal to two and a half rupees for every thousand rupees or part thereof of the net premium income of the undertaking of the insurer in India during the year 1969.

7 (1) The compensation referred to in Section 6 shall be paid by the Central Government in cash to every insurer.

(2) The compensation received by an insurer under Section 6 shall be dealt with by him in such manner as may be prescribed.

8 If any person

(a) fails to deliver to the custodian any books of account, registers or any other documents in his custody relating to the undertaking of an insurer in respect of the management of which the custodian has been appointed, or

(b) retains any property of such insurer appertaining to the undertaking of the insurer, or

(c) fails to comply with the provisions contained in sub-section (3) or sub-section (5) or sub-section (6) of Section 3, or

(d) fails to comply with any directions issued under sub-section (1) or sub-section (7) of Section 3, he shall be punishable with imprisonment for a term which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

9. No proceeding for the winding up of an insurer, the management of whose undertaking has vested in the Central Government under this ordinance, or for the appointment of a receiver in respect of such business, shall lie in any court.

10. In computing the period of limitation prescribed by any law for the time being in force for any suit or application against any person by an insurer in respect

of any matter arising out of his undertaking the time during which this ordinance is in force shall be excluded.

11 The provisions of this ordinance shall have effect notwithstanding anything inconsistent therewith contained in any other law for the time being in force or in any instrument having effect by virtue of any law other than this ordinance.

12 The Central Government may, by notified order, direct that all or any of the powers exercisable by it under this ordinance may also be exercised by any such person as may be specified in the order.

13 (1) No suit, prosecution or other legal proceeding shall lie against any custodian or authorised person in respect of anything which is in good faith done or intended to be done under this ordinance.

(2) No suit or other legal proceeding shall lie against the Central Government or any custodian or authorised person for any damage caused or likely to be caused by anything which is in good faith done or intended to be done under this ordinance.

14 Notwithstanding the provisions of Section 3 of the Insurance Act the Controller of Insurance shall not, after the appointed day, issue any new certificate of registration under that section to any person.

15 Nothing contained in this ordinance shall apply to —

(a) Any insurer whose business is being voluntarily wound up or is being wound up by a court,

(b) Any insurer to whom the Insurance Act does not apply by reason of the provisions contained in Section 3 thereof;

(c) The Calcutta Hospital and Nursing Home Benefits Association Limited;

(d) The Export Credit Guarantee Corporation,

(e) The Deposit Insurance Scheme;

(f) Any scheme of insurance which might be exempted by the Central Government relating to —

(i) Crop and cattle,

(ii) War risks,

(iii) Emergency risks

(g) General insurance business carried on by a State Government or by the Life Insurance Corporation of India.

16 (1) The Central Government may, by notification in the official gazette, make rules to carry out the provisions of this ordinance.

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely —

(a) The form and manner in which books of account appertaining to undertakings shall be maintained by insurers;

(b) The manner in which any compensation payable under this ordinance shall be dealt with by an insurer,

(c) The circumstances in which the remuneration payable to persons in charge of the management of the undertaking of an insurer under this ordinance or to custodians shall be met by the Central Government, whether wholly or in part;

(d) Any other manner which may be, or is required to be prescribed.

EXPORT ANGLE

By Stevedore

Handicrafts to EEC

THE decision of the EEC to extend its concession of duty-free imports for handicrafts, allowed to India in 1969 and Pakistan in 1970, to five more Asian countries—Iran, Ceylon, Thailand, Indonesia and the Philippines—has caused some concern among Indian exporters. The size of EEC's duty-free quota continues to remain at \$5 million a year even though the number of countries entitled to it has risen to seven. This would mean increased competition for the limited quota facility. The operation of the quota has also given rise to complaints from India. Imports of any one tariff position are limited to \$500,000. But for a number of items India's exports are well above this limit, which means that only a part of these items will be able to enter the EEC duty-free. So far, India's efforts to have the quota raised from \$5 million to \$10 million and to eliminate the \$500,000 limit for a single tariff position, have proved fruitless. Another threat to this has come from the fact that there is nothing to prevent other developing countries from asking the EEC to be included among the beneficiaries. Initially, this quota was secured after protracted negotiations by India with the Six in 1969 and Pakistan was included after a year. It is likely that unless the EEC raises the quota India will be deprived of the fruits of her labour. □

Jute prospects

JUTE exports have been declining, both in volume and value, over the last three years. From Rs 234 crores in 1967-68, exports of jute manufactures, decreased to Rs 217 crores in the succeeding year and further to Rs 206 crores in 1969-70. Exports had fallen steeply last year, the total up to November 1970 being only Rs 74 crores. While the jute industry had to face special problems last year on account of labour unrest the declining trend over the years suggests that the industry has not been able to develop its export potential. Against the background of the general up-trend in exports, this is a matter which calls for immediate remedial action. Though development of non-traditional exports has been rightly given high priority, the pattern of India's exports has not changed so radically that jute can be assigned a secondary place as a foreign exchange earner.

The contribution that the jute industry can still make to the export effort and the measures that are necessary to mitigate its difficulties are understood to have been discussed in detail at a meeting of the representatives of the industry with officials of the Central and State Governments. The most immediate problem facing the industry is to devise the appropriate mode of response which is both restrained and responsible to the imbalance in the supply and demand of jute products brought about by the events in Pakistan. This is a task that calls for qualities of the highest statesmanship that can rise above the attractions of immediate advantage. It should not be forgotten that irrespective of the transient changes in

export prospects, the main problem of the industry is one of gearing up its productive capacity to meet the specific requirements of foreign buyers as well as of the growing requirements of the domestic market. □

Salt exports

SALT manufacturers have approached the Shipping Corporation of India to make available more bottoms for the export of marine salt to South-East Asian countries. For quite some time, lack of adequate shipping facilities have come in the way of developing salt exports with the result that India had to lose major contracts in Japan early in 1970. Further, against 320 lakh tonnes, contracted with South Korea in August last year, only 50,000 tonnes of salt has been shipped till early May mainly owing to poor loading. Salt manufacturers think that the solution to this problem lies in the Shipping Corporation of India sparing some ships

for the salt trade and in improving loading operations in Indian ports from 800/1,200 tonnes to about 2,000 tonnes per day. □

Record sales of opium

OPIUM exports touched the all-time record figure of 677 tonnes in 1969-70 fetching as much as Rs 66 crores in foreign exchange. The demand for opium for medical purposes is increasing all over the world and India is the largest poppy cultivator accounting for 70 per cent of world production. In 1969-70 poppy was cultivated in 37,500 hectares as against 35,035 hectares in the previous year. (Cultivation of this drug is restricted to notified areas in Madhya Pradesh, Uttar Pradesh and Rajasthan.) All the crop is processed in the Government-owned opium and alkaloid factories in Ghazipur and Neemuch and then exported to the UK, the US, France, USSR, West Germany, Japan and Italy. □

What India can sell

THE Directorate of Commercial Publicity in the Ministry of Foreign Trade has issued a further list of global tenders. The purchasing authorities the items required and the closing dates of these tenders are as follows:

Brazil

Centrais Electricas De Minas Gerais SA CFMIG Minas Gerais Permanent Equipment for the Volta Grande Hydroelectric Project on the Rio Grande June 1 1971

Burma

Director, Myanmar Biwadin Corporation Rangoon Portable rotary screw compressor and spares, Power shift loader and accessories rock drills diesel engine driven high pressure pumps, Portable petrol engine driven rock drills and accessories, Diesel dump truck Diesel truck, Insulators for telephone and telegraph lines May 25, 1971, Carbide lamps; May 30 1971

Procurement Manager Myanmar Oil Corporation, Rangoon, Metallic compound June 5, 1971, Metre gauge bogie and four-wheel tank wagons, July 12, 1971

Chairman Union of Burma Railway Board Rangoon, Pneumatic concrete breaker, June 22, 1971, Gate lamps, June 2 1971

Cambodia

The Sonexim MVPB, Phnom Penh, Sanitary material and instruments May 28, 1971, Writing paper, white paper and duplicating paper May 25 1971

Ceylon

Chairman Tender Board, Ceylon State Hardware Corporation, Colombo Sodium Carbonate briquettes and coal tar, June 13, 1971.

Chairman, Tender Board, Ceylon Transport Board, Colombo, Tyre rebuilding plant, May 26, 1971.

Iran

The mining and Metal Smelting Company, Tehran, Safety fuses, June 16, 1971.

Kenya

The Overseas Purchasing Division, East African Railways Corporation London, Liquid petroleum gas tank wagons, May 26, 1971.

Malaysia

The Director of the Regional Office for the Agricultural Development, Gharb; Furniture, tools for vehicles, trucks and agricultural material, June 9, 1971

Nepal

Director of Civil Aviation, Department of Civil Aviation Kathmandu Airport development project, July 23, 1971

Nepal Electricity Corporation, Kathmandu Transformer and distribution line hardware, May 26 1971

South Viet Nam

Central Logistics Agency Saigon, Boiler feed pump etc, June 1, 1971, Instant noodle making plant, June 5, 1971

Syria

The General Petroleum Company, Damascus, Air compressors, June 8, 1971

The General Organisation for Euphrates Basin Construction, Aleppo, Construction of pumping station, June 21, 1971

The General Petroleum Company, Damascus, Mobile transceiver SSB, July 12, 1971

Trinidad and Tobago

Trinidad and Tobago Electricity Commission, 63 Frederick Street, Port-of-Spain Switchgear, transformers, conductors, cable fluorescent fittings and standard conductors, May 28, 1971.

Turkey

Turkiye, Selluloz Ve Kagit Fabrikalari Isletmesi, Genel Mudurlugu, Izmit-Turkev (Iron and Steel Mills, Karabuk), white sulphite pulp, May 31, 1971.

Turkiye Demir Ve Celik Isletmeler, Genel Mudurlugu, Karabuk; Dump trucks, May 25, 1971

Devlet Hava Meydanlari Isletmeleri Genel Mudurlugu, Malzeme Dairesi Baskanligi, Ankara; Machinery and instruments, spares etc, June 7, 1971.

UAR

Misr Beida Dyers, Beida Works, P O Box Alexandria, Openwidth water mangles; June 6 1971; washing and soaping machine; June 1 1971.

Exporters may obtain the tender documents from the purchasing authorities of the respective countries. Further details about these overseas contracts can be had from the *Indian Export Service Bulletin* dated May 8, 1971, issued by the directorate of Commercial Publicity in the Ministry of Foreign Trade.

—A SURVEY

Technological developments

By S. Y. Phatak

TO most people the phrase "entertainment electronics" meant little more than the bulky radio receiver in the drawing room till the early sixties, though there did exist products such as tape recorders (which were as bulky but a lot more expensive) to provide entertainment in the form of music if one could find a good source to record from. Mostly the source was the radio of which the overall quality was far from what can be described as "high-fidelity" by present standards. All these products had the common features of being quite expensive for a common man, of being very bulky and of operating only on electricity mains, which meant a total lack of portability.

It was only after the invention of the transistor that the entertainment electronics industry got a shot in the arm. One of the earliest commercial applications of the transistor was in the designing of a truly portable radio receiver, small in size and capable of working for weeks on a few ordinary torchlight battery cells. The transistor never burnt out like the earlier radio valves and the life of the set was, therefore, much longer, in addition to being absolutely smooth in operation. Today, 85 out of every 100 sets made in India, and in fact almost anywhere in the world, are of the transistorised, portable variety, which proves their popularity with the public. The immense demand for such sets, coupled with the ease with which they can be produced, has led to mass production and low selling prices. Today the world production of transistor radios is about 70 million per year, with an average retail price of about Rs 150 for a good two-band set.

Mr Phatak is Chief Engineer, Research and Development, of Telerad Private Limited.

Black and white television sets which were quite common abroad in the fifties are slowly giving way to colour TV sets which are, quite naturally, much more appealing to the viewers. A colour TV set, when first introduced, was unreliable and needed frequent and costly servicing in addition to being over three times as expensive as a black and white set. This meant a price of over Rs 6,000 to the customer. Not everybody could afford such sets for family entertainment. As with radio and television, transistors made a big impact on the set designs and made it possible for the industry to manufacture portable and semi-portable TV sets consuming between one-fifth and one-tenth of the power consumed by an equivalent "valve" set and with a much longer life.

The future trends in the design of radio receivers and television sets are going to be tied up with developments in what are known as integrated circuits (IC). These constitute an extension of the transistor technology by which a very large number of transistors, along with their associated resistors and capacitors, can be accommodated within a small microscopic area, only the terminals being brought out for external connections. The circuit is standardised and has a flexible enough performance for an IC like this to be employed as a "circuit block" in a large number of set designs. This saves on the number of components and the space normally occupied by them. A much greater advantage is the fact that an IC can employ within itself many transistors at a very low cost and, at the same time, give much better performance. As a matter of fact, IC technology opens up the field for a totally new range of electronic circuits for achieving performances which were totally unobtainable with conventional transistors. It is

INSIDE

Problems of marketing

P. R. Gupta

Blueprint for expansion

P. A. Bhat

Major manufacturers

been estimated that by 1974 at least 40 per cent of the circuitry in a conventional solid state television set will be replaced by integrated circuits of much superior performance.

Similar advances have been made by transistors in the field of tape recorders, making them portable and more reliable. The latest advance in tape recorders has been in the invention of cassettes which are sealed units containing the tape and both the feed and take-up spools. All that is required to work the tape recorder is to just push in the cassette and press the play button. This totally dispenses with the earlier tape-threading operations which were always difficult for a layman. Stereo music which gives a much more lifelike reproduction with three-dimensional special sound effects became very popular in the sixties and employed two music channels simultaneously, played through two separate amplifiers and speakers. The results

were truly remarkable compared to the earlier single-channel music systems, however high their fidelity. The latest in taped music is stereo music utilising four channels. The results are claimed to be even more impressive, with the listener literally engulfed in the resulting three-dimensional sound fields.

A recent major advance in tape recorder technology is the commercial introduction of video tape recorders for recording pictorial information like cinema films, instead of only music. The user can thus directly record any function in his household or a family outing, etc, directly on a tape recorder instead of using a movie camera needing expensive film which cannot be re-used and requires special processing after shooting. The entertainment value of both the sound and the video, i.e., picture-tape recorders, will increase tremendously with the availability of pre-recorded tapes which will give the user the choice of an infinite

variety of music and entertainment film programmes. Research is already nearing completion on a new electronic phenomena totally different from magnetic tape recording, for recording full-colour, three-dimensional pictures. It would not be a flight of fancy to say that in the next decade we might see real life-size, full-colour, three-dimensional movie programmes right in the middle of our sitting rooms, coupled with four-channel sound, making it difficult for the viewer to make out where the make-believe starts and where it ends. The same decade may also see the introduction of wall-mounted TV sets, barely a few centimetres thick, with screens the size of movie screens.

It is interesting to study the social and economic implications of the electronics revolution in this country. The electronics industry inherently tends to be labour-intensive and is, therefore, ideally suited to countries like India where labour is abundant and cheap. In Japan, for example, the industry has been able to maintain a staggering annual growth rate of about 30 per cent and the total output is over 10 per cent of the national output of the engineering industries which is of the order of over Rs 6,000 crores. The employment potential of the industry can well be imagined. There is vast scope for employment of semi-skilled and skilled workers, as also technicians and engineering graduates.

One other important role electronics plays is as a means of mass communication. Although radio and TV are used mostly for entertainment purposes, they are also the means by which the entire community can be contacted almost instantaneously in cases of national emergencies. They are also the means by which educative information could be spread most effectively to the remotest villages, especially in a country like India where literacy is still at a low level. Nor should the role of entertainment be under-rated, as creation of public interest in high-grade and sophisticated music, dance and drama and other cultural activities is an essential part of general social uplift. Without this, rapid technological development will always be a lopsided phenomenon in that it will be out of tune with the balanced progress of society.

In our country, the entertainment electronics industry is still more or less in its infancy. Hardly about two to three million radio sets are produced annually. The television industry is just groping for roots. At present, there is only one TV station at New Delhi. The licensed capacity for manufacturing TV sets is only 30,000 sets per year. The production of tape recorders is yet to start.

However, the prospects for the industry are quite bright. The quality of our radio sets is equal to any in the world in the same price range and the market will certainly improve with general economic development. Our engineers have already designed TV sets of good and reliable performance in spite of the higher complexity of design and production problems without any dependence on collaborators from abroad. If this trend continues, and given suitable official assistance in the form of incentives for indigenous effort, there is no reason why our designs should not be able to compete in the world markets in terms of quality and price.

The problems of marketing

By P. R. Gupta

MARKETING strategy in respect of radio, television and electronic equipment is basically a strategy of developing a hot line of communication with the consumers wherever they are. The consumers' needs must be assessed and ascertained so that the concept of the products can be crystallised in clear terms. In the electronics industry and in its various ramifications of sophistication, technology is of utmost importance. Out-of-date methods and know-how must make room continuously for the more modern. The rate of obsolescence in the electronics industry is so high that if a manufacturing unit does not keep itself continuously open to advanced methods and techniques, it is liable to fall behind in its race in the competitive market.

The challenge today, therefore, lies in laying a solid technological base and strengthening it further by recourse to the latest techniques in the manufacturing

processes. Only through this can the radio industry ensure quality and economies of scale, i.e., price reduction. These are the two most important considerations that weigh with an average consumer.

Greater attention to technology will enable the Indian radio and TV industry to produce receivers of international quality and thus enable it to compete successfully in international markets. Indian radios, radio kits and radio components have already entered the markets abroad and earned foreign exchange for the country. It is just a beginning in the nation's commercial operations in the international market. The industry must, therefore, continue to remain vigilant in regard to the progress made by electronics in the advanced countries and try to keep pace with the developments there. The research and development laboratories attached to the manufacturing units must continuously remain active and alert. International quality should be their guiding principle.

The marketing strategy for electronic products such as radio and television sets must also take into account the industry's obligation to provide expert and efficient after-sales service. Although a lot is being heard about this obligation to the consumer, it is necessary to review the service facilities available with radio dealers in the country in general. How many of them have their service branches equipped with basic instruments and tools? How many have qualified service personnel? It is indeed futile to talk of marketing entertainment items like radio and TV sets, radiograms etc. without paying adequate

attention to the service facilities to which buyers of these electronic items are, as a matter of right, entitled.

The Indian radio industry only recently limped its way into the television sector. Recognition of the benefits of the latest trends in world technology relating to the highly sophisticated field of television has yet to come. With the television service still confined to Delhi, the industry does not yet know precisely the way it will develop. Nevertheless, the radio industry must keep itself in readiness to break into the field of television manufacture on an economically viable scale. The trade also must gradually equip itself adequately for promoting the sale and servicing of television receivers.

The television service technician, it is said, should reach the consumer ahead of the TV receiver itself. Being a highly sophisticated electronic product, a TV set must always be assured of efficient service. If the industry and trade do not prepare the ground for this expert after-sales service, the marketing of television receivers is going to suffer considerably. Service to TV viewers, in contrast to service to owners of radios, has, in 85 per cent of cases, to be carried out at the place of installation. This calls for a good deal of preparation.

The justification of radio and TV in developing countries lies in the service they render to education and the furtherance of national goals. That the lack of a balanced fare of entertainment and information has an adverse effect on the marketing of entertainment electronics is borne out by the recent decline in the turnover of medium-wave receivers. The medium-wave receiver the world over has been known to be associated with the spread of radio listening. But in India though 70 per cent of the country's population is covered by medium-wave transmission, medium-wave receivers have a different story to tell. Lack of satisfying entertainment programmes in medium-wave transmission has affected the sale of medium-wave receivers as will be seen from the following sale figures (organised sector):

1966	..	..	41,800
1967	..	..	1,90,200
1968	..	..	3,79,700
1969	..	..	5,17,500
1970	..	..	2,88,000
1971 (outlook)	..	..	1,00,000

The popular Vivid Bharati programme covers hardly 10 per cent of the total population covered by medium-wave transmission. In 1969 the sale of medium-wave sets seemed to reach its saturation point. Since then sales have been declining. The inadequacy of popular programmes has thus stood in the way of low-priced sets penetrating deep into the countryside—a development which goes counter to the objective of bringing this medium of mass communication to each and every home in this vast country. No marketing strategy will ever succeed in selling low-priced radio sets in the rural areas of India unless All India Radio takes suitable measures to provide a balanced fare of entertainment and information to the set-owners.

TELETRONIK presents two happy brothers

"JAI-KISSAN"
2-Band All-Wave Transistor
Rs 140/- (Excise Free) taxes extra

"JAI-JAWAN"
3-Band All-Wave Transistor
Rs 185/- (Excise Free) taxes extra

Two tough ones offering new high quality. They are solid state—can take the roughest handling. No other leading make can compare in performance and reception at their price. Very low battery drain too. Two sockets for battery eliminator and earphone. See the two happy brothers from the happy range of Teletronik Radios. These two brothers are now entertaining Defence personnel and are also in demand abroad.

Electronics: A blueprint for expansion

By P. A. Bhat

MAHARASHTRA has a sufficiently broad-based electronics industry. The components, equipment and instruments units already established account for nearly 55 per cent of the country's electronics output. Some of these units have also entered the export markets. But with its abundant resources, mainly human (cheap skilled labour), a technological base and entrepreneurs to develop the industry, there is ample scope for setting up many more labour-intensive export-oriented units. These could cover colour TV, cassettes, tape recorders, telephone and communication equipment, medical and biological electronics, marine electronics, desk calculators, automobile electronics, etc, mainly for export both to developed and developing countries.

Mr Bhat is Managing Director of Asian Electronics Ltd, Bombay.

I have a few suggestions for consideration:

Maharashtra should establish an integrated industrial estate exclusively for the production of electronics—both for the domestic and export markets. Provision should be made to set up at least 200 middle-scale units, each employing 150 to 300 highly skilled, skilled and semi-skilled people. This estate should encourage both capital-intensive, medium-scale ancillary, and service-oriented projects.

The State authorities or the local administration should provide the infrastructure—particularly a township, clean, healthy, modern housing facilities, drainage, shopping centres, places of recreation, medical and educational institutions, etc. Vehicular traffic, except for transport of raw materials and finished products, should be discouraged.

Fifty per cent of the production capacity set up in the estate should be earmarked for exports and the authorities should see to it through appropriate incentives, that the targets are achieved.

A scientific research institution should be established in addition to educational and vocational training, employment guidance, industrial safety and other relative safety training centres.

A central laboratory for testing and quality control should be established.

The estate should encourage co-operation among ancillary units. The area of production, mainly for export and domestic marketing, should be classified under

two heads—consumer electronics and professional. Bonded production facilities should be provided and export inspection units should be established.

A capital investment of Rs 100 crores on plant and equipment, buildings and utilities, besides working capital, should be planned—with a foreign exchange content not exceeding 50 per cent, to be provided for sophisticated plant and equipment.

The procedures for the establishment of industrial units should be smooth, and entrepreneurs should not be made to wait for long for licences, clearances, permits, etc. The State electronics committee can scrutinise the proposals and give blanket permission for the setting up of units in which foreign exchange is not involved. Institutions such as the State Industrial and Investment Corporation of Maharashtra Ltd (SICOM), the Industrial Development Bank of India, the Industrial Credit

Growth of the radio receivers industry

Year	Installed capacity (thousand nos.)	Production (thousand nos.)	Percentage utilisation of capacity (4=3/2 x 100)
(1)	(2)	(3)	(4)
1960	279.2	268.3	96.1
1961	279.2	326.3	116.9

and Investment Corporation of India Ltd (ICICI), the Industrial Finance Corporation of India (IFC), State Finance Corporation, banking and other agencies should be urged to make available at least 80 per cent of the capital required for such a project.

If the entrepreneur can arrange his own foreign exchange, by way of loans or advances on firm export commitments or foreign minority participation, then all the formalities involved should be minimised. The State electronics committee can scrutinise projects in the light of national policy and give permission without much loss of time.

Foreign exchange accounts should be allowed to be opened in Indian banks by exporters and entrepreneurs who should be allowed to operate them to import the requisite raw materials, components and capital equipment for modernisation without having to wait for import licences. Banks should be authorised to permit the

utilisation of a specific portion of the foreign exchange earnings of any exporter for maintenance imports or modernisation of production.

The industry should be regulated or protected by only fiscal policies rather than by administrative controls.

Where necessary, incentives should be offered for foreign capital investment and know-how in highly sophisticated lines. Examples of a few developing countries for attracting foreign capital for their national growth are cited below.

South Korea enacted the Foreign Investment Encouragement Law (FIEL) in 1970 providing for a five-year tax holiday. Thereafter, taxes were reduced by two-thirds for the next two years and one-third for the subsequent year. Machinery and raw material imports are allowed duty-free. Remittances of principal and profit are guaranteed. Investors are allowed to remit 20 per cent of their investment every year, after two years of operation. They can also remit profits not exceeding 20 per cent of their investment from the first year onwards. They are protected from nationalisation of property by assurances of prompt and fair compensation.

Taiwan offers a five-year tax holiday unlimited and unrestricted remittances of earnings and repatriation of capital, payment of customs duty by instalments on raw materials, and duty-free plant and machinery, 100 per cent foreign ownership. Strikes are banned by law.

Ireland offers a non-repayable basic cash grant to the extent of 40 per cent of the total cost of factory construction, plant, equipment and training of workers, plus an additional 20 per cent in case of special types of industries. Other salient terms are: 100 per cent foreign ownership and freedom from Government interference, tax holiday on profits from exports for 10 years, ready-built factory buildings at attractive rents; subsidisation of interest, allowance of expenditure on scientific research and on purchase of patent rights; two-thirds allowance on local rates on buildings for 10 years; no capital gains tax; and free transfer of capital, dividends and profits.

The setting up in the industrial estate of the following labour-intensive assembly units within a period of two or three years requires the attention of the authorities.

Units	Targeted export value Rs crores
5 colour TV assembly units	36
4 radio assembly units F.M. 2,00,00,000	25

No doubt, this seems to be an ambitious programme. Commensurate with our population, the vastness of the country and the availability of resources, this is hardly a half per cent of what the US has planned for 1971. But in terms of natural and human resources, India is potentially one of the richest countries in the world. Being a late-comer in the process of development, India can benefit from a wide spectrum of technological advances in other parts of the world and learn from their experience and not repeat the mistakes they performed had to commit. But if this challenge is to be met, not only must our politicians and civil servants be aware of what is possible but there must be a purposeful objective and equally purposeful implementation.

Steel pipes and tubes

Remarkable export performance

By Raunaq Singh

—A SURVEY

INSIDE

Better climate for growth

—Onkar S. Kanwar

Vital role in Indian economy

—Special Correspondent

INDIA which was bypassed by the Industrial Revolution due to colonial rule has had to catch up at a very fast pace after independence. Thanks to the far-sighted economic planning, which laid emphasis on setting up of basic and heavy industries particularly steel, India is now poised for a breakthrough in industry and in the export of industrial products.

India has now become the eighth largest industrialised country in the world. A host of new industries have come up producing a variety of goods. They have introduced the latest production techniques and technical know-how, and quality consciousness has developed to a remarkable degree.

Perhaps no other industry can illustrate the rapid progress made by India in the industrial field than engineering goods. Between 1951 and 1956 their production rose by 49.3 per cent, and during the period 1956-1961 the rise was as much as 93.3 per cent. This was followed by a rise of 58.9 per cent during the subsequent five years. This industry has successfully passed through the take-off stage and is on the threshold of new overseas markets. There has been a ten-fold increase in the export of engineering goods during the past decade. From about Rs 10 crores in 1960-61, they went up to Rs 106 crores in 1969-70, and over Rs 112 crores in 1970-71.

Despite the earlier bias against indigenous know-how, Indians are now designing and building a variety of sophisticated plants at home and winning recognition abroad. Indian technologists are preparing feasibility studies and product reports for joint steel works in Ceylon, Singapore, East Africa and Latin America. They are advising the United Nations on a ferro-alloys factory in Iran. They are offering product studies and

engineering designs to a number of European enterprises.

This does not, however, mean that India can claim to be on top in regard to technical know-how. On the other hand, Indian industries welcome sophisticated technical expertise from countries which have made a mark. Apart from this, we are always on the look-out for the latest equipment and machinery for producing quality goods, for both the home and overseas markets; our effort is to produce goods of the latest design and workmanship and conforming to the most rigid international standards.

No wonder, Indian engineering goods are making rapid headway in world trade in the face of severe competition from traditional exporters from sophisticated and developed countries of Europe, the US and Japan. To crown it all, Indian goods can stand competition not only in developing countries, but also in industrially advanced countries of Europe, America, Australia and of Asia.

An outstanding example would be steel pipes and tubes. The history of the tube industry in India is very recent. Until 16 years ago, India was meeting her requirements of steel tubes and pipes through imports. In 1955 the first tube mill was commissioned in Orissa. From then onwards there came up more units, and the installed capacity as it stands today is over eight lakh tonnes. The raw material in the form of skelp and strip is being produced by the steel mills in India and conform to international standards. Luckily a few of the units, which have had the advantage of technical collaboration with internationally known pipe manufacturers, have adopted the latest processes of tube and pipe manufacture. The result is that their products, which are subjected to rigid, almost ruthless, quality control, find a ready market not only in India but in 32 countries abroad, including such advanced ones as the US, the UK, Australia and West Germany.

Mr Singh is Managing Director of Bharat Steel Tubes Limited, and Chairman of the Engineering Export Promotion Council.

The export of steel pipes and tubes has had a phenomenal rise during the past few years. The first tube was exported from India to Ceylon in 1958. Since then the picture has changed fast. India is no longer an importer, but is one of the leading exporters of steel tubes and pipes. The total exports moved up from over Rs 4 crores in 1967-68 to over Rs 10 crores during 1968-69.

In spite of being comparatively a new-comer in world trade, dominated earlier by highly industrialised countries, the Indian tube industry has already established its competitiveness and quality in foreign markets. Indian manufacturers have participated in several global tenders and have conclusively proved that the industry can supply tubes of international standards, and specifications. Having the support of a growing steel industry, plentiful coal and mineral resources, cheap and efficient labour, highly trained and qualified technicians, and ideally situated geographically, the tube industry is forging ahead from year to year. This is one of the few industries in India which is

not only self-sufficient but also has an enormous capacity for export.

The pattern of tube and pipe exports from India is changing, and all indications are that this trend will continue in the future. Indian manufacturers believe that the only lasting and long-term market for India's manufactured products, including pipes and tubes, is that of the developed countries such as the US and Europe.

For instance, the US market imports every year over a million tonnes of steel tubes similar to those exported from India. This represents nearly one-fifth of the pipes and tubes featuring in international trade. There is no reason why we should not be able to improve our share. During the period between 1964 and 1970, India was able to export about 45,500 tonnes of small-diameter tubes to the US. The dent was made after a great deal of effort and in the face of severe competition from domestic as well as overseas suppliers. Having found customer acceptance in the US market it is now up to us to follow this up with increased exports.

These exports have been possible not only because Indian tubes compare favourably with similar ones manufactured either locally in the importing countries or in the traditional supplying countries, but also because the Indians offer c.i.f. prices competitive with those of the established suppliers.

International trends are in our favour. Developed nations, by the very force of economic pressures, are shedding off the production of items like tubes and pipes, and concentrating on highly sophisticated goods requiring the most advanced technology. This is evident not only in the US and Europe but also in Japan.

It is up to us to cash in on these opportunities, for we are well geared to meet all such requirements. Given sympathetic support by agencies such as banks, railways, shipping lines and customs authorities, the export targets for the next five years fixed by the Engineering Export Promotion Council for steel tubes and pipes as also other engineering goods can easily be fulfilled.

Khandelwal Tubes

Khandelwal tubes are the obvious choice — in building, agriculture and industry.
Because they are welded by **INDUWELD** — the world's most advanced tube-welding process.
Manufactured as per ISS, BSS, ASTM and other international standards.
Regularly exported all over the world — including sophisticated markets like the U.S.A.

CALCUTTA BOMBAY NEW DELHI MADRAS AHMEDABAD KANPUR

Better climate for further growth

By Onkar S. Kanwar

THE tube industry, as we know it today, is hardly 150 years old. It began with the manufacture of pipes from wrought iron strip as raw material, but even then the need was being felt for seamless tubes. This was made possible with the development of the open hearth process of steel making in 1868. As a result new processes of manufacturing tubes came into practice. The push bench process was replaced, in due course, by the Pilger process and this in turn yielded place to the modern technique of producing steel tubes by extrusion. The earlier crudely welded tubes have now been replaced by electric resistance welded ones, possessing great strength and precision. This process involves shaping the tube to the correct size from a strip of steel by passing it through suitable rollers. It then travels under electrode rolls which pass heavy electric current through the resistance offered by contact with the two edges. This instantly raises the steel to welding heat and a perfect weld is achieved. The latest process has made this welding so perfect that the tubes can be cold drawn to extremely small bore sizes.

Besides the welded types and seamless tube making, there are now in use many other processes like the electric fusion weld, ERW, and submerged arc weld. The latest is ERW radio frequency which generates welding heat through a high frequency resistance at 450,000 cycles per second. This eliminates the use of welding metal, the welding being effected by the use of only the parent material. These processes have made it possible to produce steel pipes and tubes on a mass scale at as quick a speed as 70 metres a minute. The whole operation is automatic—a flat steel strip is fed into one end of the machine and it emerges from the other end shaped as a precision welded tube. But simple as it may sound, the process involves eight distinct stages—cleansing the surface of the strip; cutting the strip to accurate width; forming the close-jointed tube; electrically welding the joint; removing external weld flash; accurately sizing the welded tube by cutting it to mill lengths. Over and above this is threading and galvanising the tube in accordance with customer specifications. At every stage the tube is subjected to rigid quality control tests.

The steel tubes and pipes industry in India is a post-Independence development. Till as late as 1950, the tube and pipe requirements were met from imports. Except for drinking water and sanitary uses or in a few industries, the market for tubes and pipes was limited. With the emerg-

ence of a developing economy in the fifties, the demand increased and the need was felt for the manufacture of tubes and pipes indigenously. Prior to 1955, only one company was producing tubes and pipes. Two more units came up in that year. By the end of the First Plan period, the combined capacity of all these units was only 60,000 tonnes. Subsequent years witnessed the birth of more units producing pipes and tubes of various dimensions. By 1962, there were eight units in the field in the organised sector, and their production rose to 155,267 tonnes. At present there are ten units with an approximate installed capacity of over 8,00,000 tonnes per annum.

India is now not only self-sufficient in tubes and pipes, but has an enormous capacity to export them to different markets of the world. The steel tube industry entered the export field very recently. The first tube was exported to Ceylon in 1958. Since then exports have grown in geometric proportion. India is now one of the leading exporters of steel tubes and pipes. The total exports moved up from over Rs 4 crores in 1967-68 to over Rs 10 crores during 1968-69 and to over Rs 12 crores in 1969-70. If we keep up to the Fourth Plan target, in another three years pipe and tube export will climb to Rs 25 crores. There might be shortfalls and minor adjustments here and there, but the industry has gained sufficient experience and confidence to take all these in its stride and to keep on moving ahead.

How was this achieved? The first shipment worth a modest Rs 70 lakhs was made in 1963-64. The next three years saw

some improvement in this field, but all of a sudden the industry was caught in the acute economic recession which swept over India in 1967-68. Home demand fell off rapidly. The industry, which had made a large investment in machinery and technical and managerial personnel, was faced with a grim prospect. Was all this investment to go waste? It really tested the mettle of the industry and, we must say, in retrospect, it proved its worth. If the internal market had dried up, there were far more attractive propositions from abroad. So a hectic but imaginative search for overseas markets commenced. These efforts bore fruit. Within two years the industry had made export history.

India now exports tubes and pipes not only to developing nations in Africa, the Middle East and South-East Asia, but to sophisticated markets in the US, UK, Australia and West Germany. This has been achieved in the face of stiff competition from industrialised countries who had monopolised the trade. In quality and price Indian tubes and pipes are second to none; hence this phenomenal success.

The growth of the steel tubes and pipes industry has had its own problems and setbacks. Many of these still continue and many more may perhaps come in the way in future. The most acute problem is the shortage of steel strip and skelp. In some units as much as 40 per cent of the installed capacity is lying idle, not because there is no market for the products, but because unfortunately, these units do not have enough steel to feed their mills with. Another problem which our industry faces is the high cost of ocean freight. We have to compete in the overseas markets against developed countries, whose shipping companies treat pipes and tubes as a promotional item and thus reduce the freight to as much as 50 per cent of the Indian shipments.

No doubt the Government has realised the potentialities of this industry for earning foreign exchange as also its importance in the development of agriculture and industry in the country. To meet its demand for steel, import of strip and skelp were allowed, though the supplies were insufficient and erratic. It is expected that the new trade policy will, with its increased quota of imported steel for the tubes and pipes industry, help it produce more.

Growth of steel pipes and tubes industry : 1960 to 1969

Mr Kanwar is Executive Director of Bharat Steel Tubes Limited.

ZENITH the pipe that goes round the world

ZENITH black & galvanised steel pipes—incorporating the international know-how of Mannesmann Meer AG., West Germany—come in light, medium and heavy grades to BS-1387, to meet varying customer requirements. ZENITH STEEL PIPES won the Government of India's coveted Certificate of Merit for Outstanding Export Performance.

Over 55% of ZENITH's production of top-grade steel pipes goes to over 39 countries (including the USA, UK, Australia, Scandinavia, Canada, New Zealand). Wherever tough, durable steel piping is called for.

You can't beat steel. You can't beat ZENITH steel pipes.

ZENITH—a big name in pipes

STEEL PIPES AND TUBES

Role in national economy

By A Special Correspondent

THE steel pipes and tubes industry has an important role in the Indian economy. Tubular products of iron and steel have a wide range of applications in industries, building and construction, public health and sanitation. Cast iron pipes, of a wide variety of sizes and for varying pressures, are extensively used for transmission of water, gas and sewage. They are particularly adapted to underground and submerged service on account of their comparatively high corrosion-resistance qualities. When properly coated and wrapped, the steel pipe has been found to be resistant to corrosion when positioned in certain soils. While the cast iron pipes industry has been a fairly well-established one, the production of steel pipes and tubes has been of comparatively recent origin. The variety in steel tubes is large and it covers size, wall thickness, kind of steel used, type of joint, protective coating, manufacturing process and end use. Based on manufacturing process, steel

tubes can be categorised as welded type and seamless type. With the improvements in different welding techniques—electric fusion welding, electric resistance welding, submerged arc electric welding etc.—welded tubes, are rapidly replacing the seamless type, whose use is at present mainly confined to selected special applications.

Welded tubes of a diameter of over 20 inches are used in India mostly for penstocks and primary water mains. Line tubes used for main lines of water transmission are mostly of 10 and 12 inches in diameter, while those for oil lines are 8 to 20 inches and are made to the rigid specifications of the American Petroleum Institute. Welded structural tubes and commercial tubes can be of various sizes. Commercial tubes used for conveyance of water and gas vary from half an inch to 12 inches. Tubes for agricultural purposes are usually 3 to 4 inches in size and for the tubular poles the sizes used are
